

A high-magnification electron micrograph of a cell. A large, dark, circular nucleus is the central feature, surrounded by a lighter, granular cytoplasm containing various organelles and vesicles. The overall image has a blue and grey color palette.

SYNTHETIC BIOLOGY

1

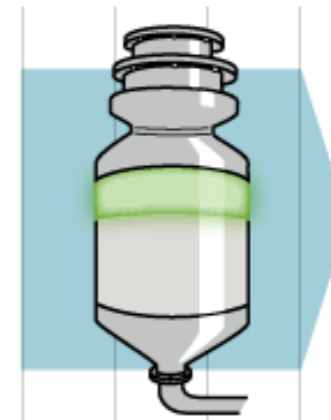

4

2

Semisynthetic method
Fermentation & photochemistry

About 3 months from lab to ACT

3

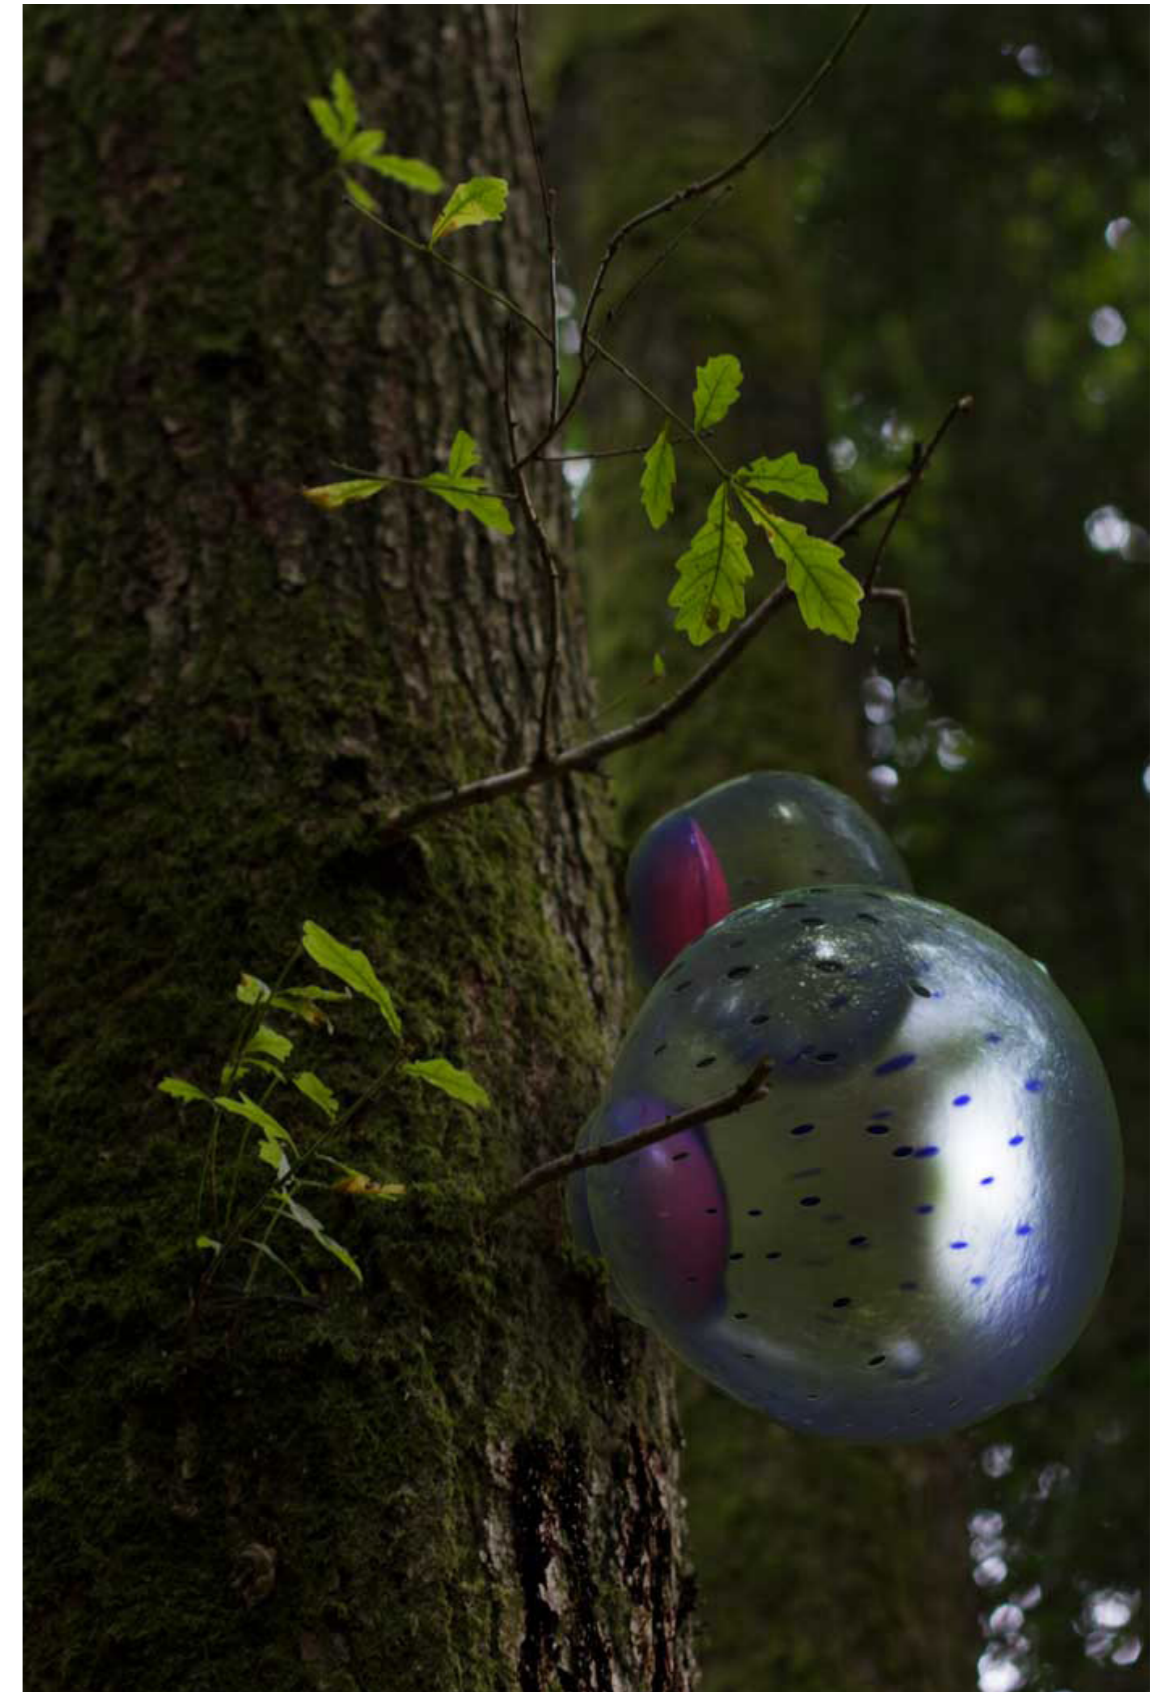

Agricultural method
Cultivation & extraction

About 10 months from seed to ACT

5

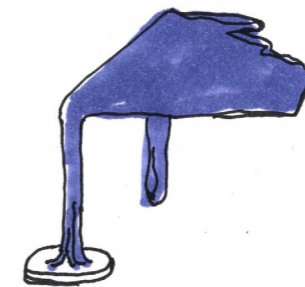

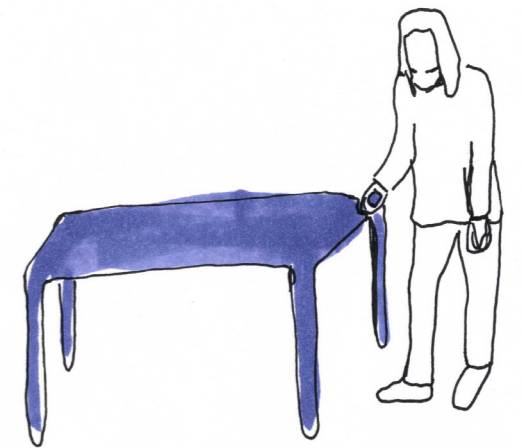

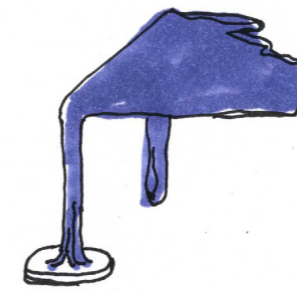

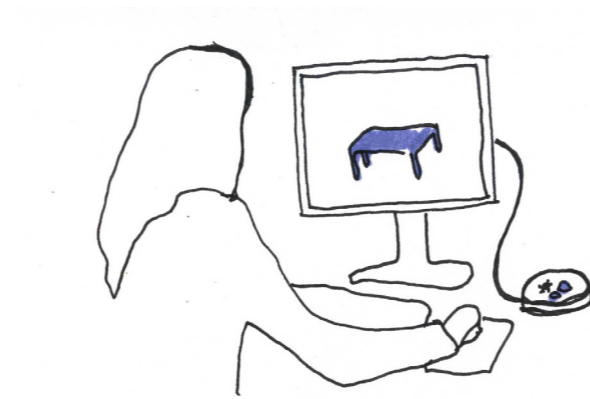

- 1. In-Vitro meat
- 2. Glowing silk
- 3. Synthetic fuel
- 4. Muufri, synthetic milk
- 5. Malaria drug

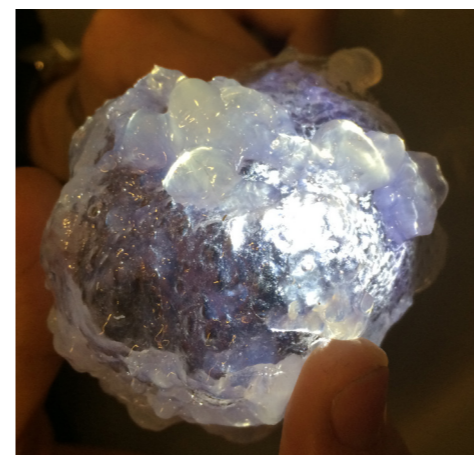

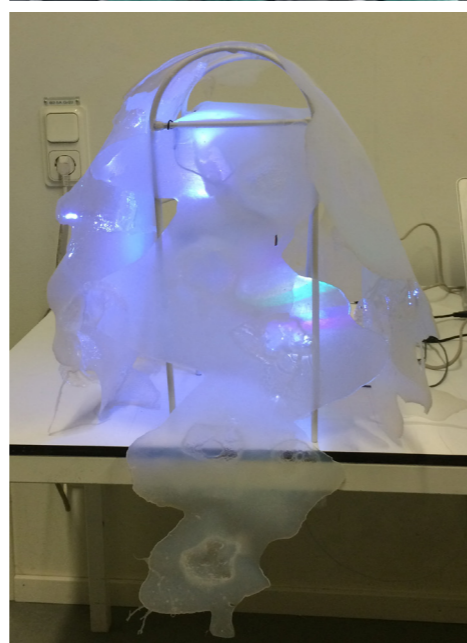

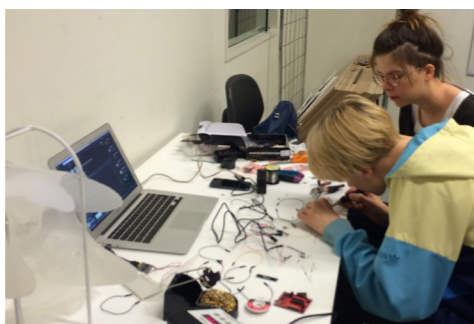

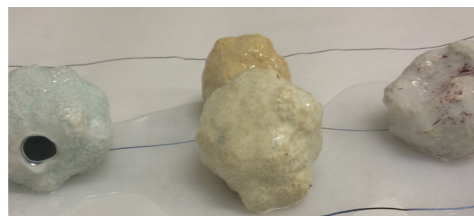

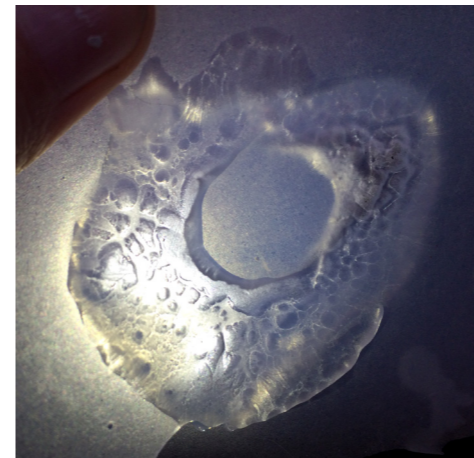

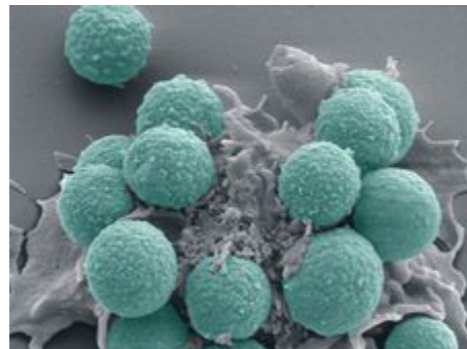

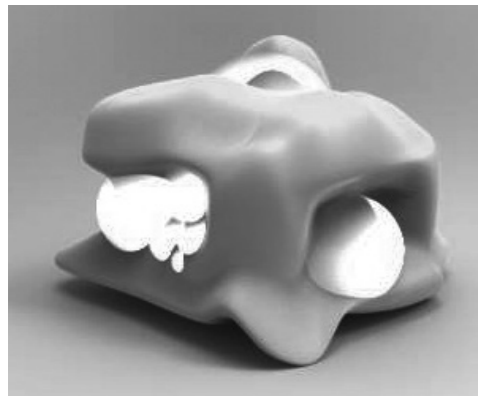

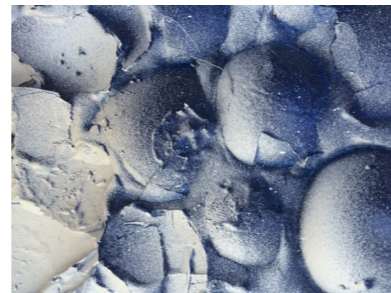

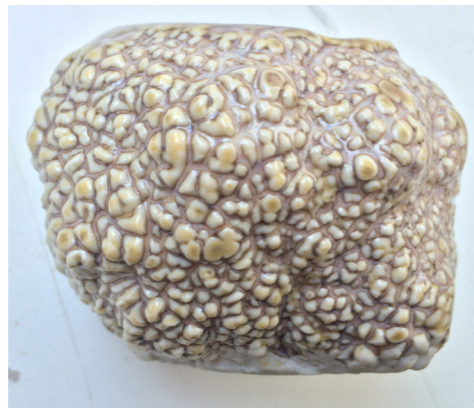

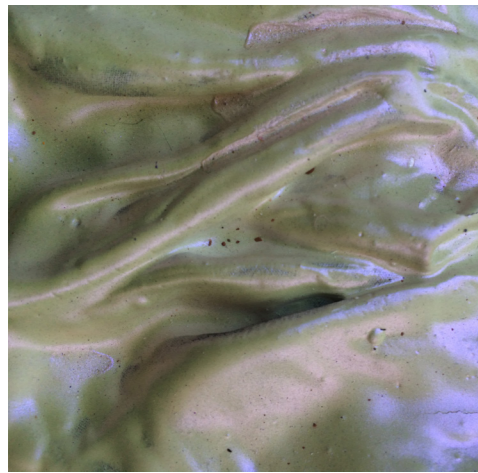

Designing for the
sixth extinction,
Alexandra Daisy
Ginsberg 2013

CONCEPT

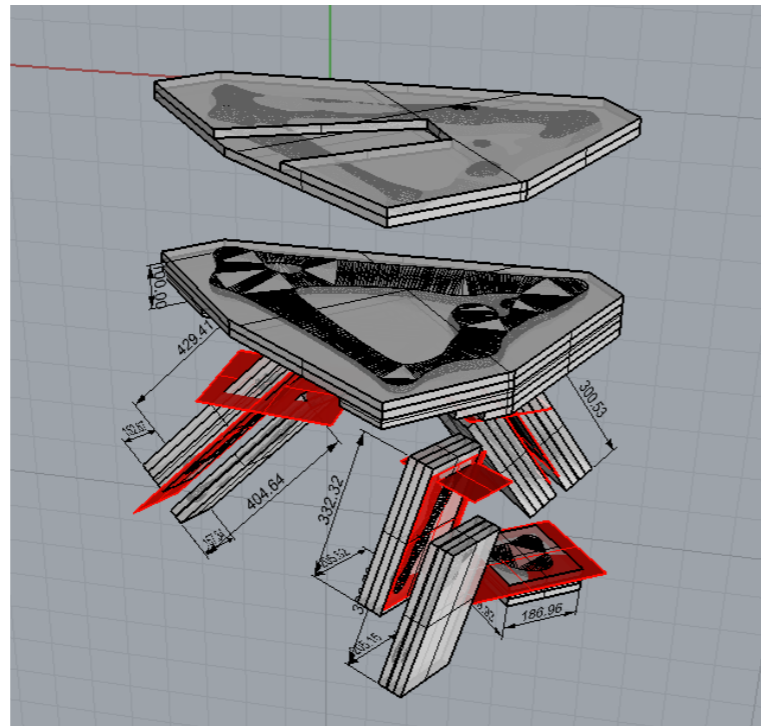

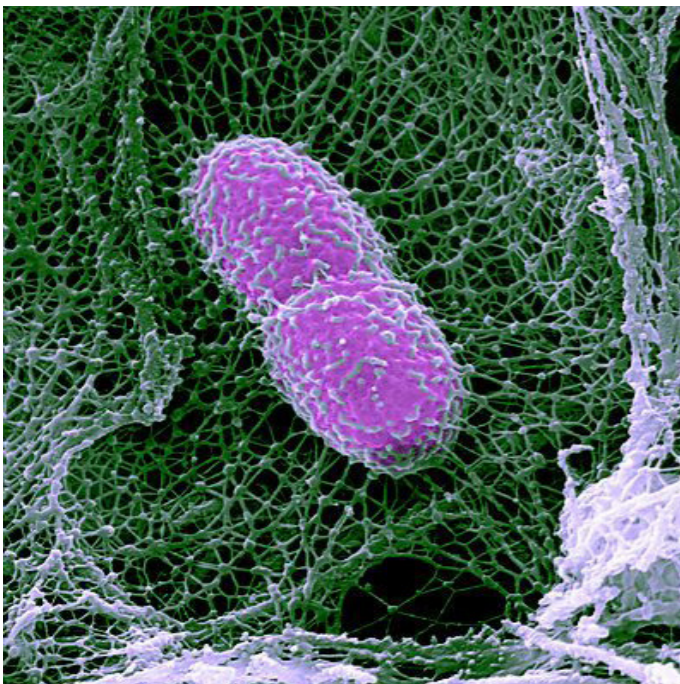

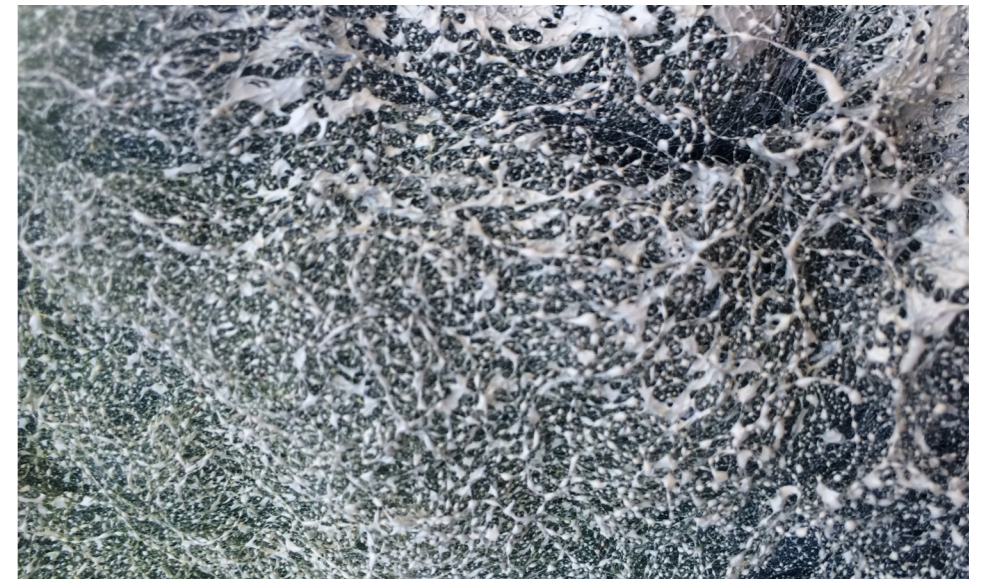

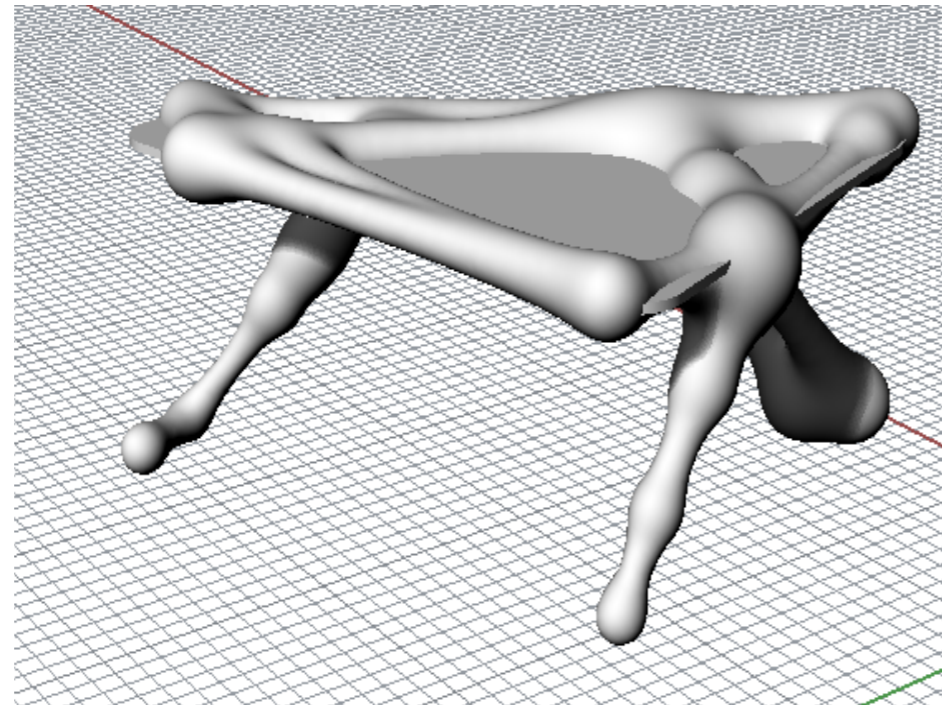

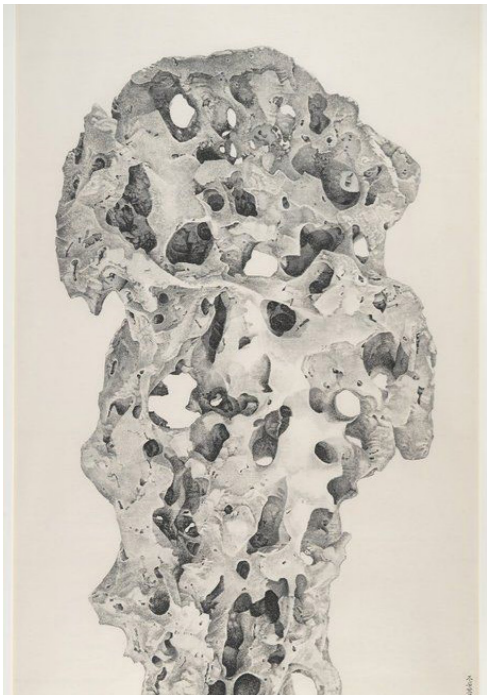

1. A seed is programmed to become a table.
2. The seed is obtained by a person that wants a table.
3. The seed germinates at home, grows and needs care to live.
4. It lives and repairs itself.
5. If you are moving you can take a cutting instead of bringing the table.
6. The process starts over in the new home.
7. In the end, the table dies and returns to nature.

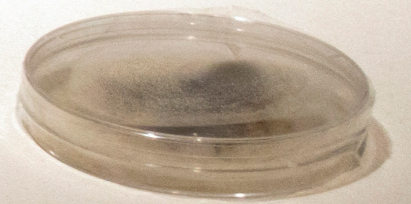

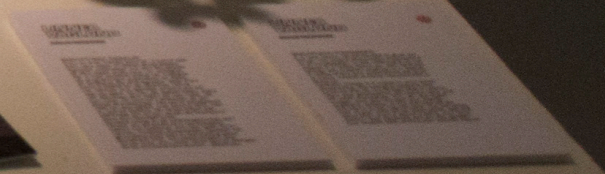

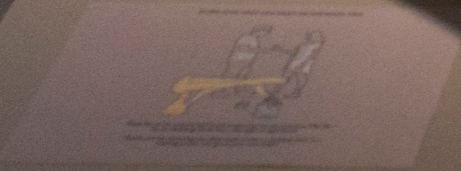

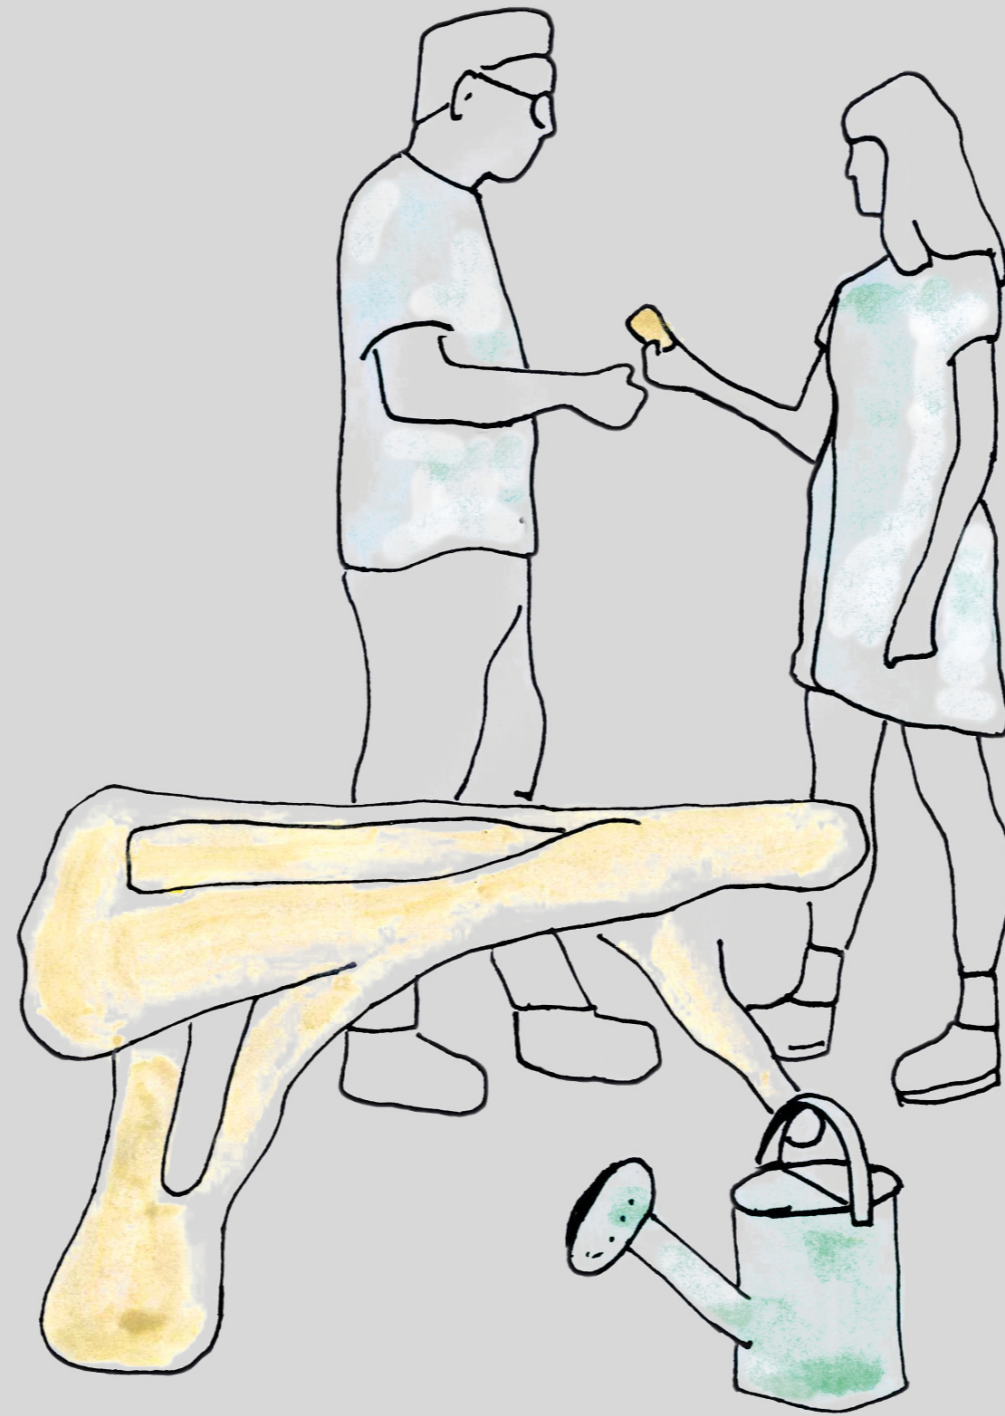

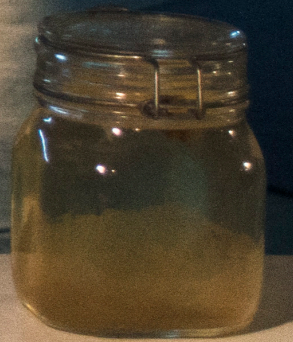

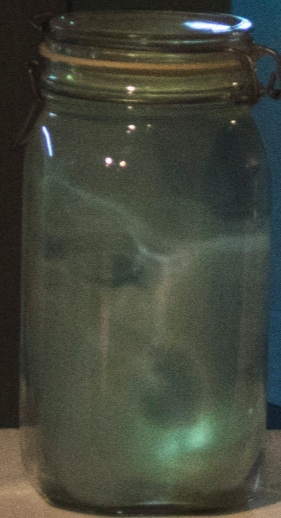

- My teddybear disappeared in the park, but I am re-growing it, Mögli will be back soon!

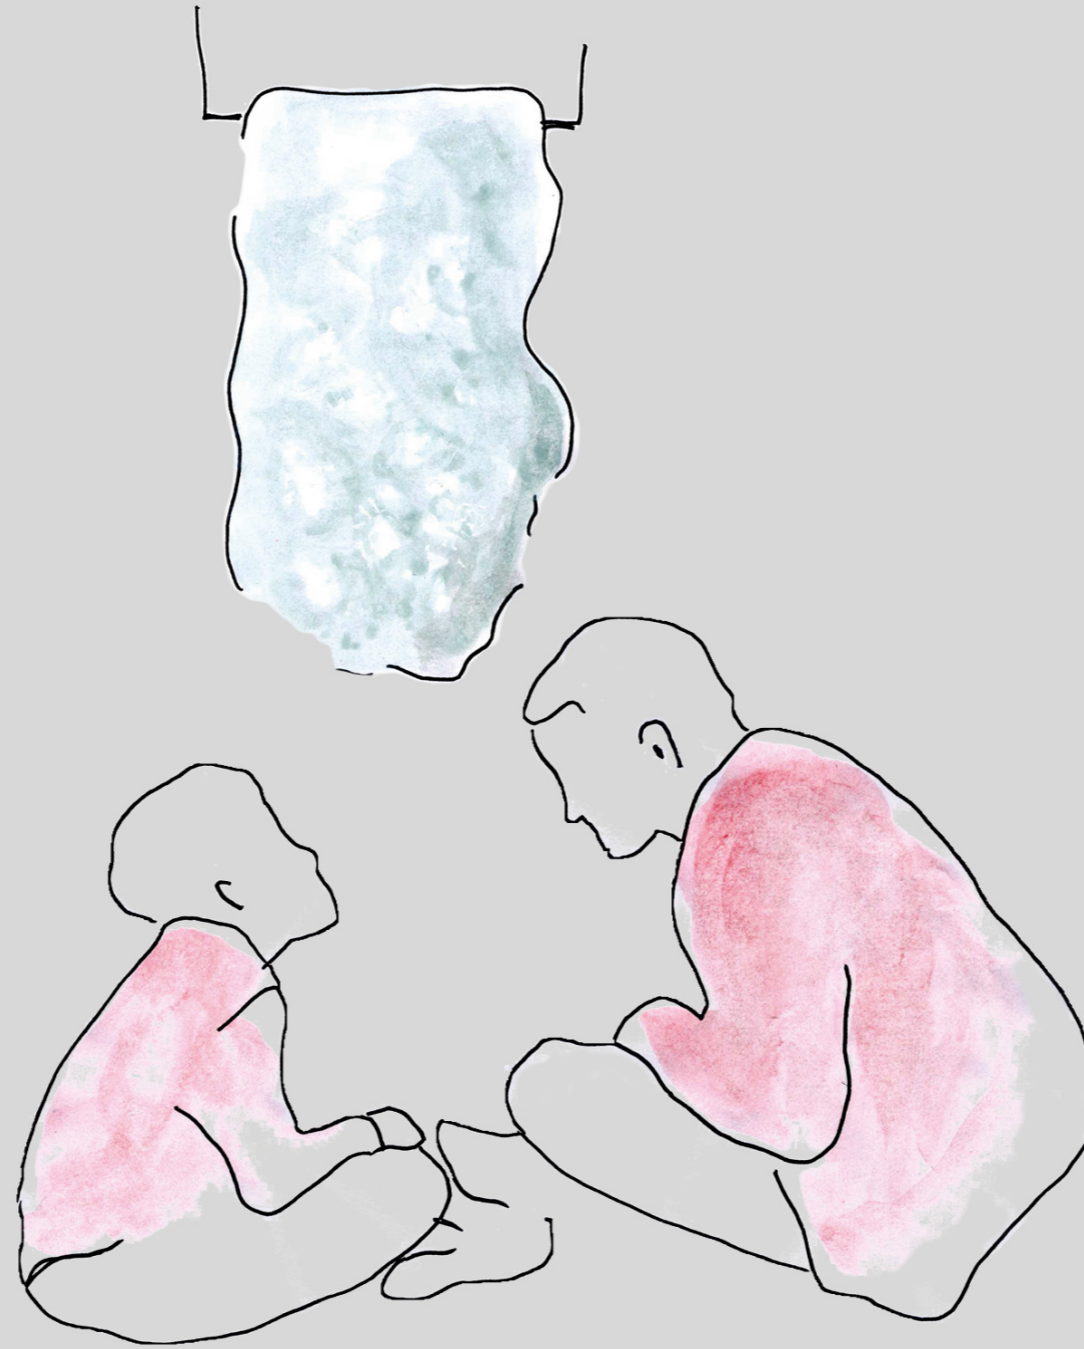

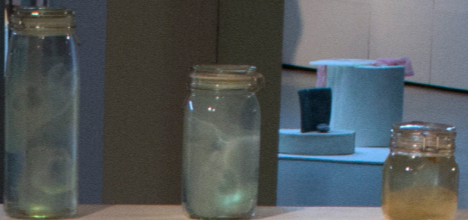

- Thank you for watering my table while I was on holiday,
here is a cutting so you can grow your own table!

LAMP FROM MODIFIED YEAST

- Did you know that in the old days the light in the lamps came from electricity from big ovens where coal was burnt? The entire earth was heated and almost perished!
