

# Scientific Visualization

## An Introduction

*Featuring*  
 **ParaView**

Vetria L. Byrd, PhD  
Assistant Professor

International High Performance Computing Summer School  
Ljubljana, Slovenia

Wednesday, June 29, 2016

**PURDUE**  
POLYTECHNIC

## Academic Preparation

- Computer Science (PhD, MS)
- Biomedical Engineering (MSMBE)

## Where I Am Now

Assistant Professor  
Purdue University  
Computer Graphics Technology  
Research Focus: Data Visualization

## What I've Done

### Visualization Initiatives

- Research Experience for Undergraduates in Collaborative Data Visualization Applications (2014/2015)
- BPViz: Broaden Participation in Visualization (2014/2016)
  - August 3 – 4, 2016
  - Purdue/NCSA

*Agent for "Insight"*

**PURDUE**  
POLYTECHNIC

# AGENDA

## INTRODUCTION TO SCIENTIFIC VISUALIZATION

- High Level Overview
- Purpose Of visualization
- Visualization Applications
- Data Visualization Process
- Scientific Visualization Process
- Introduction to Scientific Visualization Using ParaView
  - Hands-on Workshop
- Additional Resources

# “Insight” Tells a Story

## Napoleon’s Invasion of Russia in 1812 By **Jacque Minard**

*Figurative Map of the successive losses in men of the French Army in the Russian campaign 1812-1813.*

*Drawn up by J. H. Minard, Inspector General of Bridges and Roads in retirement. Paris, November 20, 1869.*

*The number of men present are represented by the widths of the colored zones at a rate of one millimetre for every ten thousand men; they are further written across the zones. The red designates the men who enter into Russia, the black those who leave it. The information which has served to trace up the map has been extracted from the works of M. N. Thiery, of a figure, of *Revue*, of Chamberlay, and the unpublished diary of *Arvid*, physician of the Army since October 28th. In order to better judge with the eye the diminution of the army, I have assumed that the troops of Louis-Nicolas, and of Marshal Davoust, who had been detached at *Smolensk* and *Woronezh* and been re-joined around *Orsha* and *Wladis*, had always marched with the army.*

## Research Experience for Undergraduates in Collaborative Data Visualization Applications

Purdue Polytechnic Institute Computer Graphics Technology Department invites undergraduates with an interest in visualization to participate in cutting-edge undergraduate research at Purdue University.

**The VisREU Experience:** 8-Weeks, Paid Research, Professional Development, Network Building, Developing Lifetime Transferrable Skills

### What is Visualization

Visualization is the process of transforming raw data into a visual representation of relationships that exist within the data. Visualization leads to insight, better understanding of relationships between variables that exist in the data. Regardless of your academic major, at some point during your academic life you will have a need to visualize something. The VisREU Site is the perfect opportunity to learn about the visualization pipeline, applications and tools to help you create impactful visualizations.

### About the Program

The program identifies research collaborators with visualization needs and assigns each student to a

# Visualization

Visualization is the tool that will take us forward from the traditional output of high performance computing (HPC) that we are used to into a visual medium that allows researchers to *collaborate* and *elaborate* on the finding's they've got.

***Tim Carroll***

# Scientific Visualization

- Primarily concerned with the visualization of three-dimensional phenomena (architectural, meteorological, medical, biological, etc.),

# Scientific Visualization

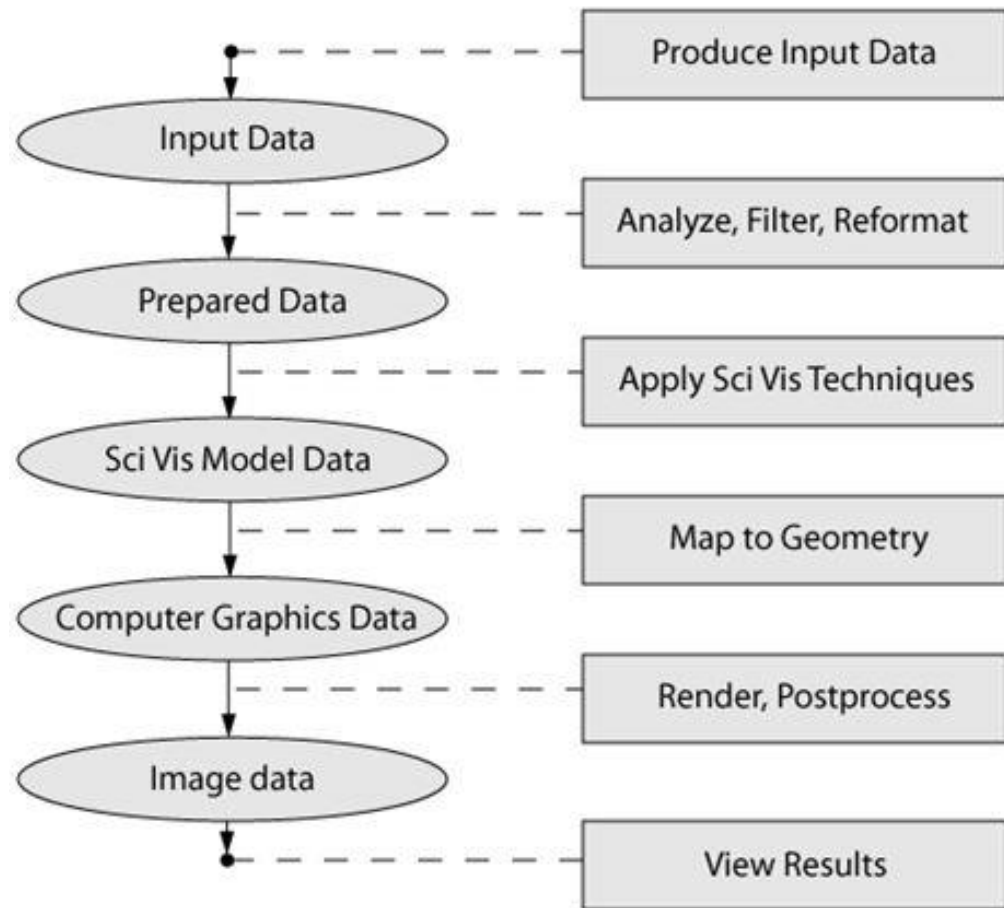

- Primarily concerned with the visualization of three-dimensional phenomena (architectural, meteorological, medical, biological, etc.),
- Where the emphasis is on realistic renderings of volumes, surfaces, illumination sources, and so forth, perhaps with a dynamic (time) component.

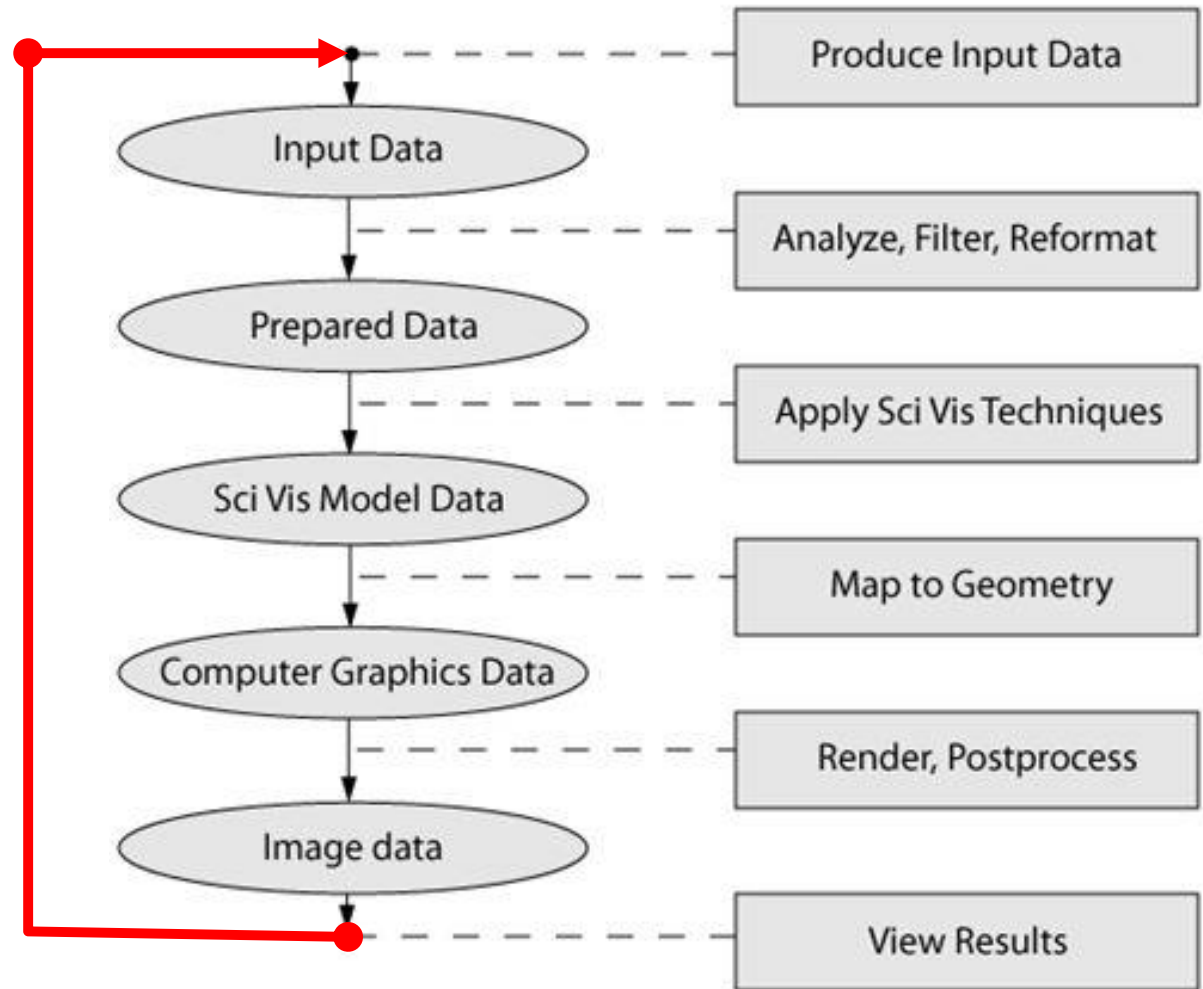

# Scientific Visualization Pipeline

What's Missing?

# Scientific Visualization Pipeline

# Scientific Visualization Pipeline: Step 1 . . .

## Produce Data

- Simulated Data
- Images
- Numerical
- Some measured value
- Observed Phenomena

# Scientific Visualization Pipeline:

## Step 2 . . .

# Analyze, Filter, Reformat

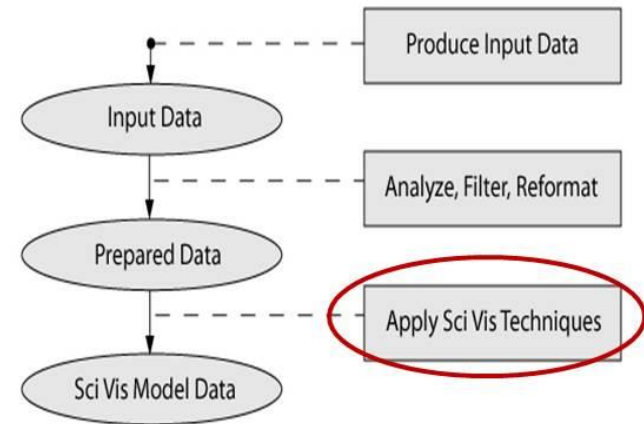

- Cleaning up the data
  - Removing noise
  - Replacing missing values
  - Clamping values to be within a specific range of interest
- Performing operations to yield more useful data

# Scientific Visualization Pipeline: Step 3

## Apply SciVis Techniques

- Converts raw information into something more understandable
- Visually extracting meaning from a scientific data set using various techniques

# Scientific Visualization Pipeline: Step 3

## Apply SciVis Techniques

- Converts raw information into something more understandable
- Visually extracting meaning from a scientific data set using various techniques

# Visualization Scales with HPC

Large data produced by large simulations produce large visualization results and require large visualization resources

# Visualization Toolkit (VTK)

- Open source, multiplatform
- Supports distributed computation models
- Extensible modular architecture
- Available for 3D computer graphics, image processing and visualization
- Collection of C++ libraries
- Leveraged by many applications
- Divided into logical areas
  - Filtering
  - Information Visualization
  - Volume Rendering
- Cross platform, using OpenGL
- Wrapped in Python, Tool Command Language (Tcl) and Java

# Visualization Toolkit (VTK)

**ParaView** is an end-user application with support for

- Parallel Data Archiving
- Parallel Reading
- Parallel Processing
- Parallel Rendering
- Single node, Client-Server, MPI Cluster Rendering

# Introduction to Scientific Visualization Using

- Multi-platform parallel data analysis and visualization application
- Mature, feature-rich interface
- Good for general purpose, rapid visualization

Mac

Windows

Linux

- Open Source . . . It's Free!
- <http://www.paraview.org/>
- Built upon the Visualization Toolkit (VTK) library
- Primary contributors:
  - Kitware, Inc.
  - Sandia National Laboratory
  - Los Alamos National Laboratory
  - Army Research Laboratory

## Uniform Rectilinear (Image Data)

A uniform rectilinear grid is a one- two- or three- dimensional array of data. The points are orthonormal to each other and are spaced regularly along each direction.

**Grid** – regular structure, all voxels (cells) are the same size and shape

## Curvilinear (Structured Grid)

Curvilinear grids have the same topology as rectilinear grids. However, each point in a curvilinear grid can be placed at an arbitrary coordinate (provided that it does not result in cells that overlap or self intersect). Curvilinear grids provide the more compact memory footprint and implicit topology of the rectilinear grids, but also allow for much more variation in the shape of the mesh.

**Curvilinear** – regularly gridded mesh shaping function applied

## Unstructured Grid

Unstructured data sets are composed of points, lines, 2D polygons, 3D tetrahedra, and nonlinear cells. They are similar to polygonal data except that they can also represent 3D tetrahedra and nonlinear cells, which cannot be directly rendered.

**Unstructured grid** – irregular mesh typically composed of tetrahedra, prisms, pyramids, or hexahedra

- Point data
- Polygonal data
- Images
- Multi-block
- Adaptive Mesh Refinement (AMR)
- Time series support

# SUPPORTED VISUALIZATION ALGORITHMS

- Isosurfaces
- Cutting planes
- Streamlines
- Glyphs
- Volume rendering
- Clipping
- Height maps
- & more

- Supports derived variables
- Scriptable via Python
- Saves animations
- Can run in parallel / distributed mode for large data visualization

# ParaView **SUPPORTED FILE FORMATS**

- ParaView Data (.pvd)
- VTK (.vtp, .vtu, .vti, .vts, .vtr)

# VISUALIZATION PIPELINE

- All processing operations (filters) produce data sets
- Can further process the result of every operation to build complex visualizations
  - Extract a cutting plane,
  - Apply glyphs (i.e. vector arrows) to the result
    - Gives a plane of glyphs through your 3D volume

# DEMONSTRATION

- WRF weather forecast data set
  - Rectilinear grid
  - Multiple scalar and vector variables
  - Time series
- Can show:
  - Clouds
  - Wind
  - Temperature

# VISUALIZING DATA USING PARAVIEW

## Three Basic Steps:

- First your data must be **read** into ParaView
- Next, you may apply any number of **filters** that process the data to generate, extract, or derive features from the data
- Finally, a viewable image is **rendered** from the data

# ParaView 5.0.0

## Let's get started . . . .

**STOP!**

**This means YOU.**

## Sanity Check

- ✓ **Software Installed?**
- ✓ **Data Sets downloaded?**
- ✓ **Can you locate the datasets?**

<http://web.ics.purdue.edu/~vbyrd/trainingData.html>

# Tutorial Datasets

- Clip

## Should see

- Clip object in Pipeline Browser
- Clipping Plane

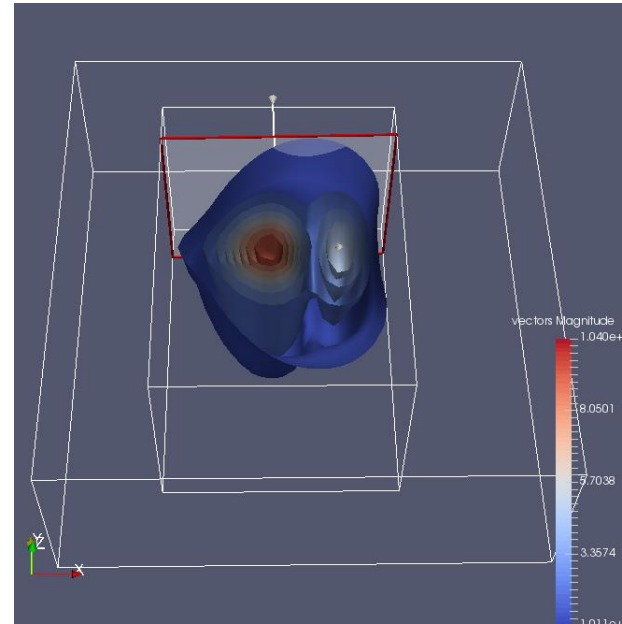

If you do not see the clipping plane click the properties button

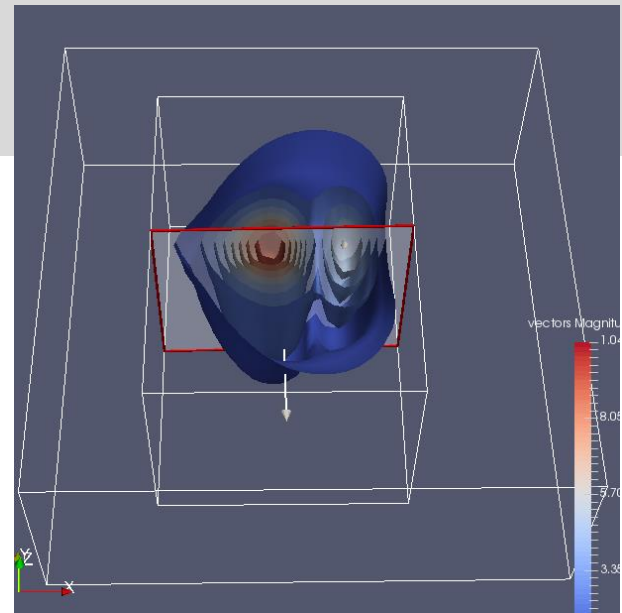

# POSITION THE CLIPPING PLANE

- Using the mouse, hover over the arrow head (will change color – red)
- Press the mouse button, keep it pressed and rotate the clipping plane; arrow points out of the screen towards you

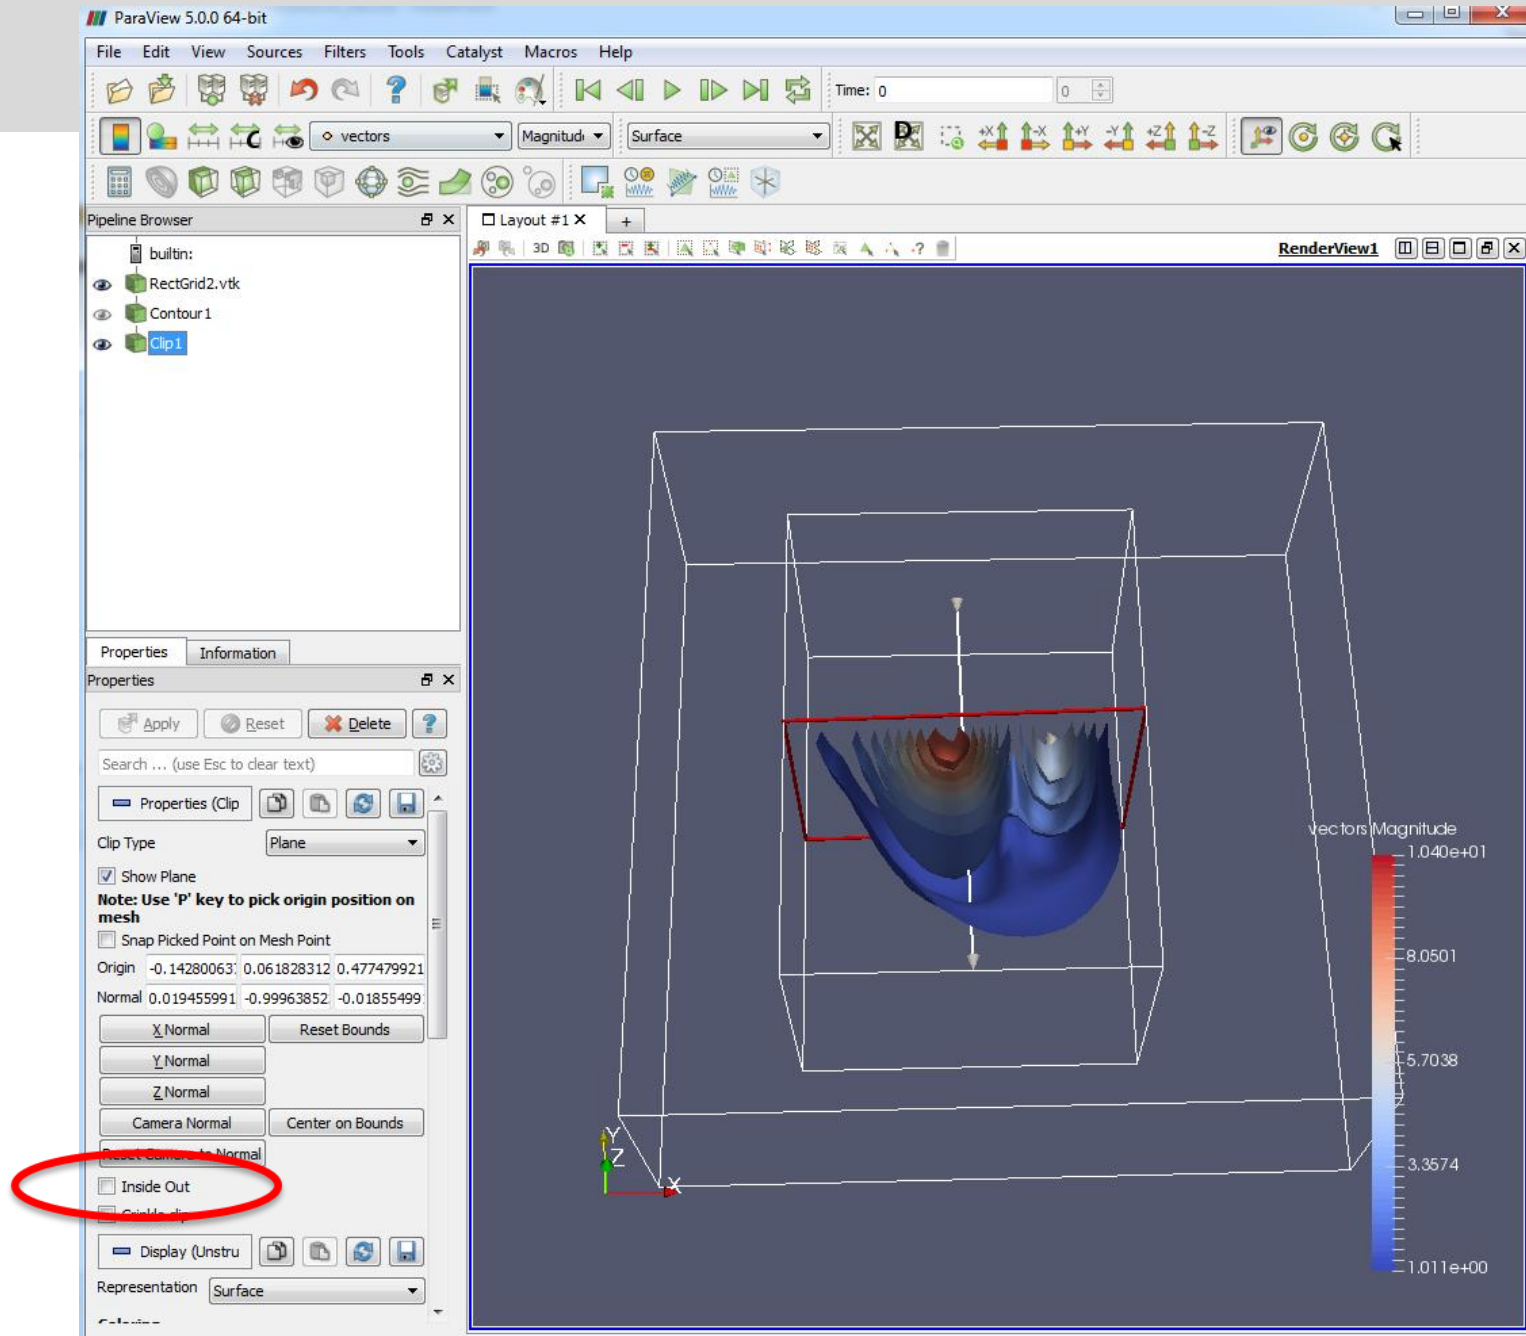

When done: Click **Apply**

➤ Click the **Inside Out** box to switch the clipping plane

➤ Click **Apply**

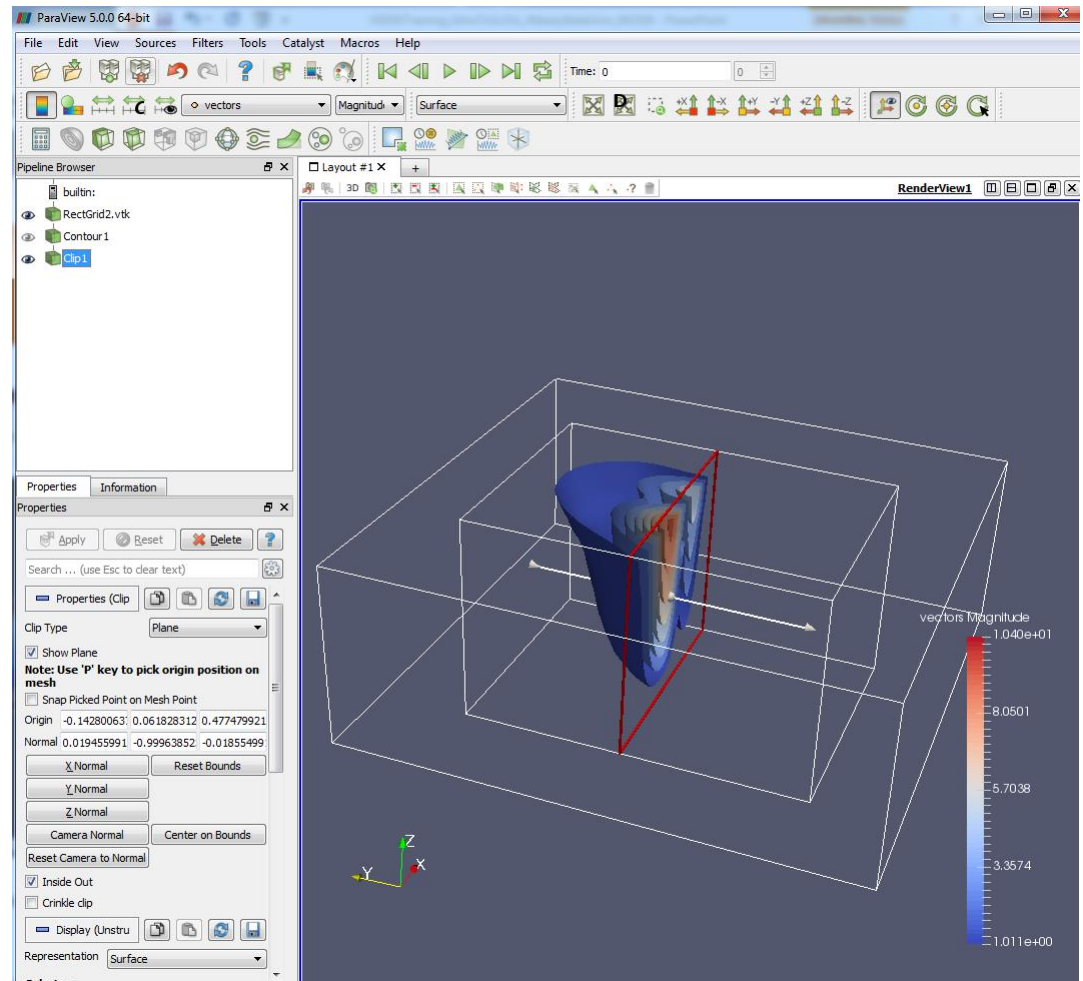

# INSIDE OUT FEATURE

# CLIP ISOSURFACES

## SUMMARY OF STEPS

- Click **+Y** view button
- Click **Filters** → **Common** → **Clip**
- Position the clipping plane (move arrow point to desired position)
- Click **Apply**
- Check **Inside Out** check box to switch the clipping plane view

# Slice Isosurfaces

**Slice – Intersects the geometry with a plane. The effect is similar to clipping except that all that remains is the geometry where the plane is located.**

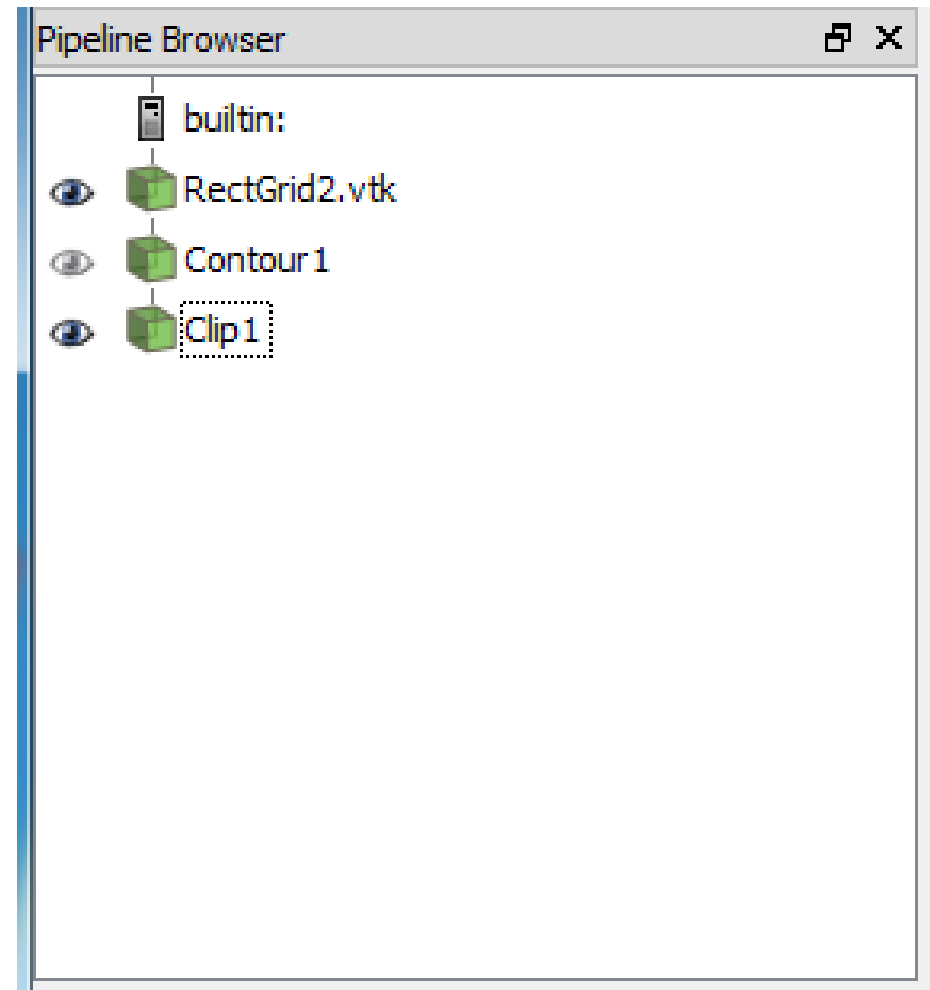

➤ Make visible

➤ RectGrid2.vtk

➤ Clip1

➤ To make an object visible click the eye icon to the left of the object

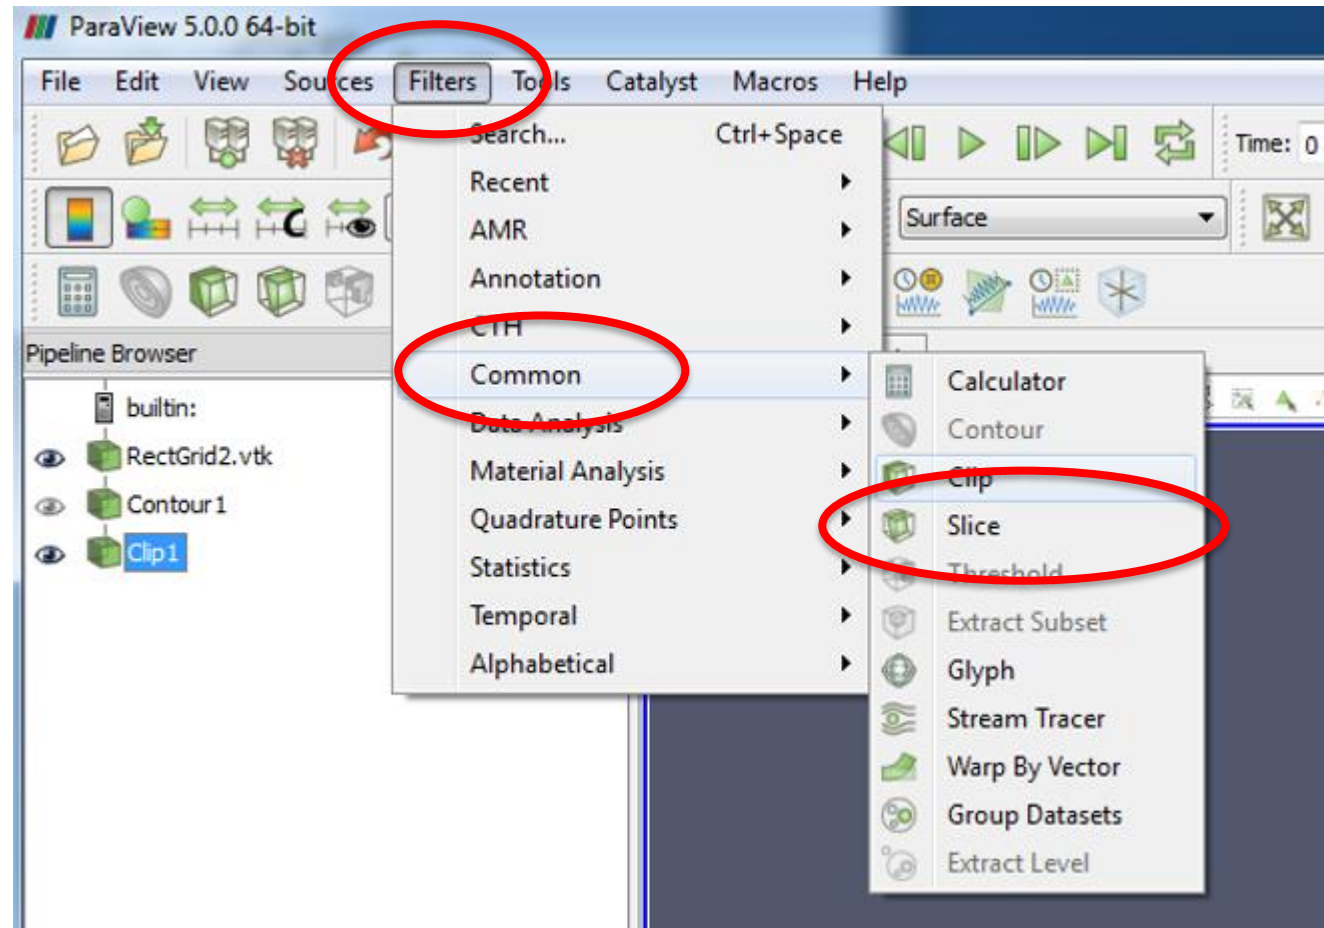

➤ Contour 1 should **NOT** be visible for the next task

# SLICE ISOSURFACE

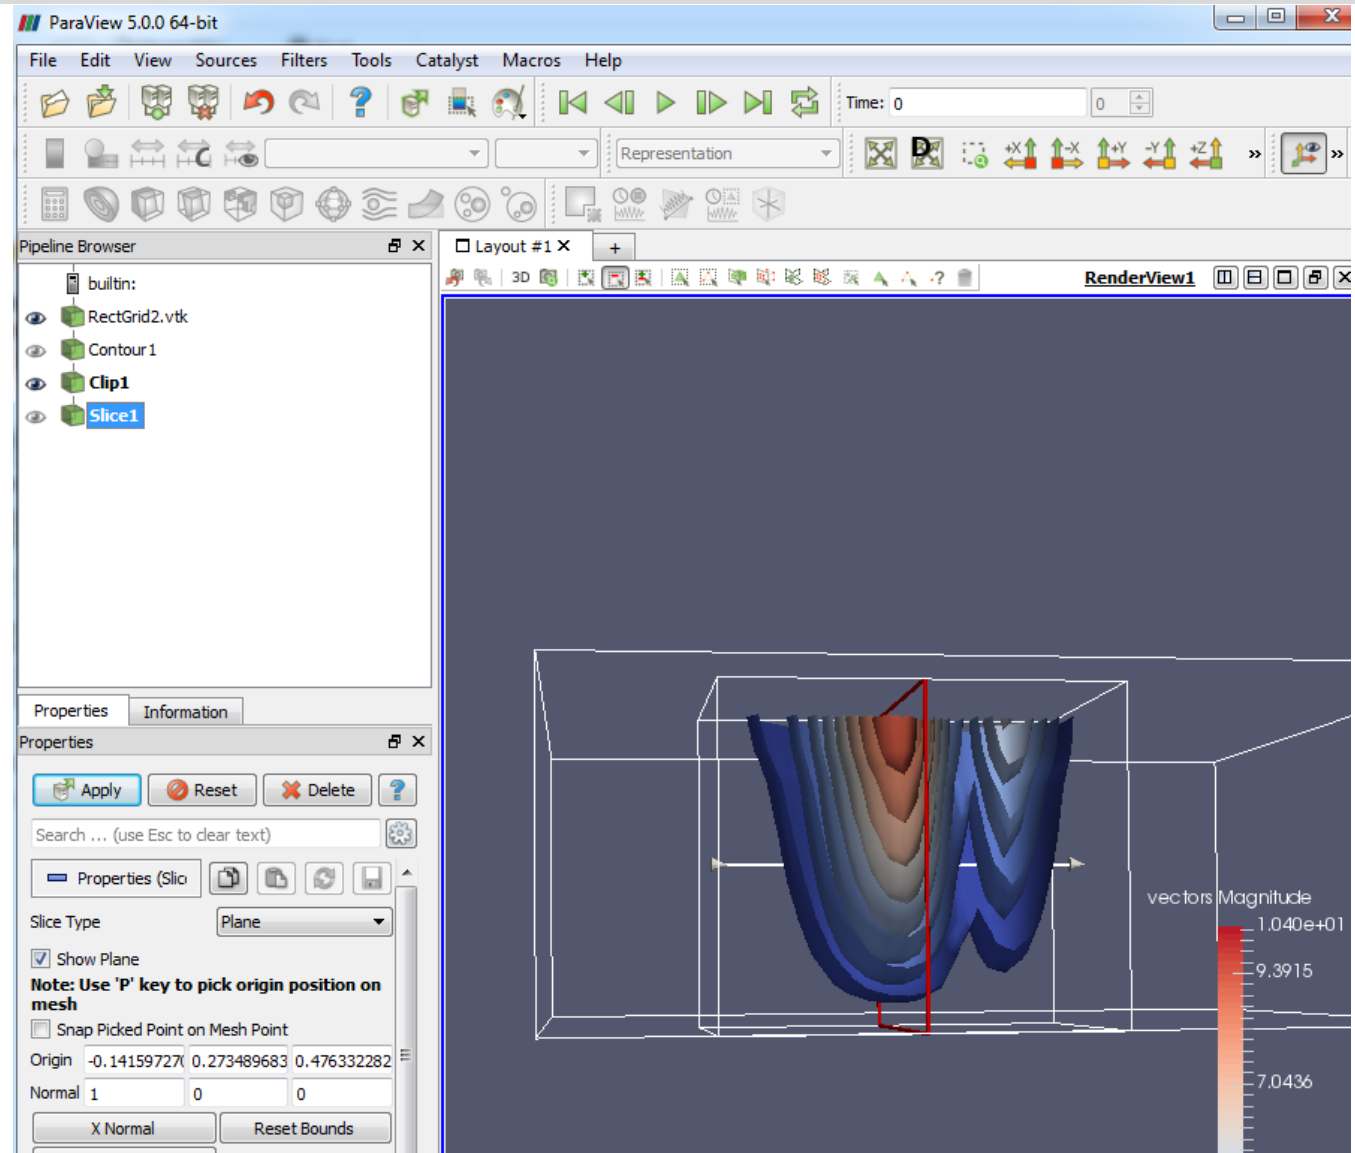

## Select Clip 1

- Filters
- Common
- Slice

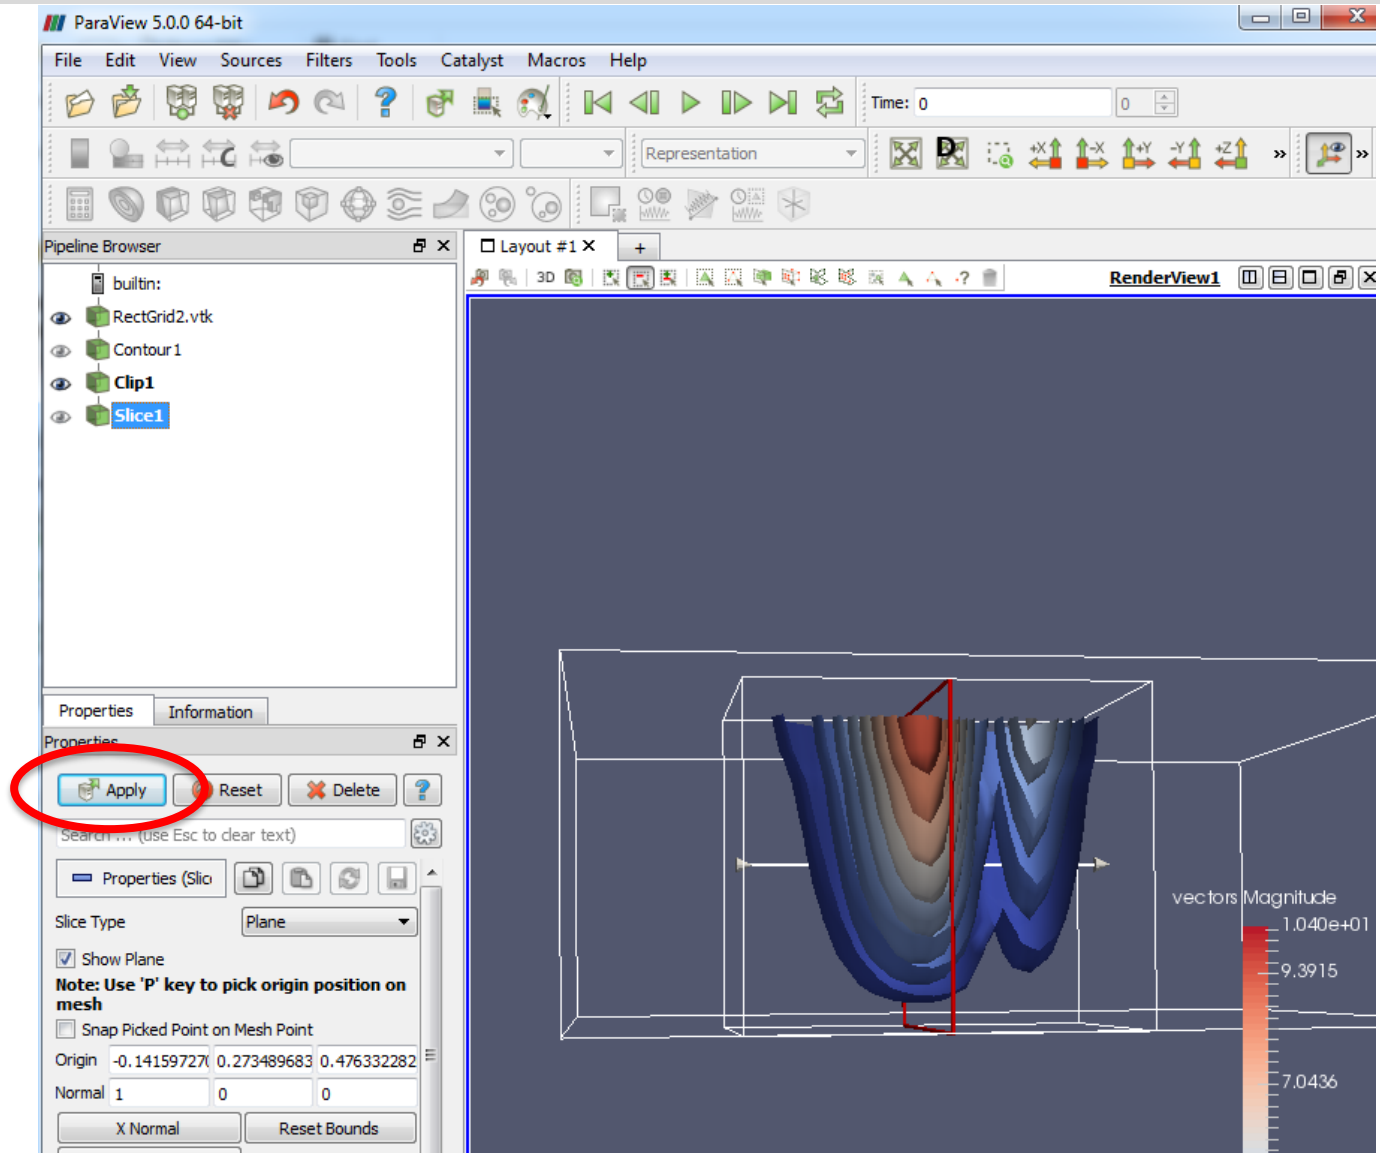

Should see

- Slice1 object in Pipeline Browser
- Slicing Plane with arrow in 3D window

Position the slicing plane (move arrow point to desired position)

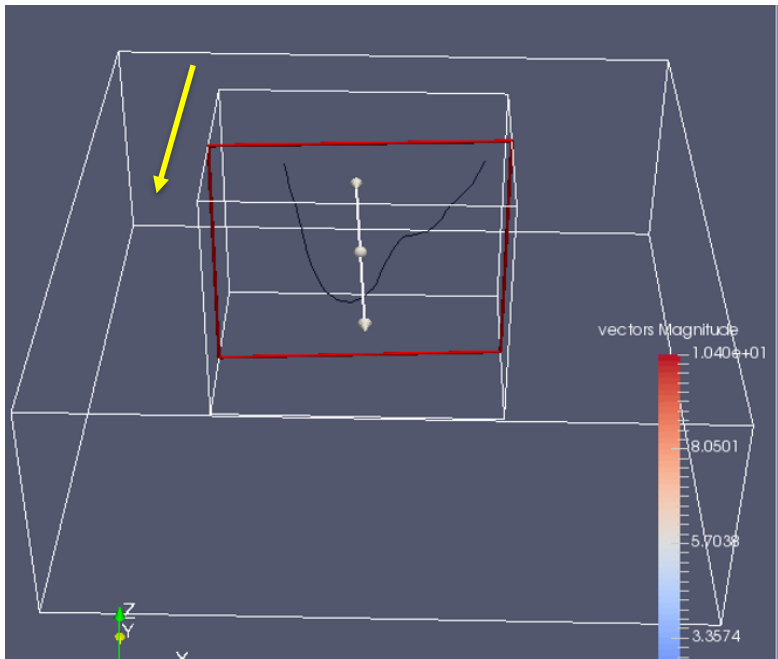

Click **Apply**

You can move the slicing plane along the axis to see a different slice

Click **Apply** to see changes

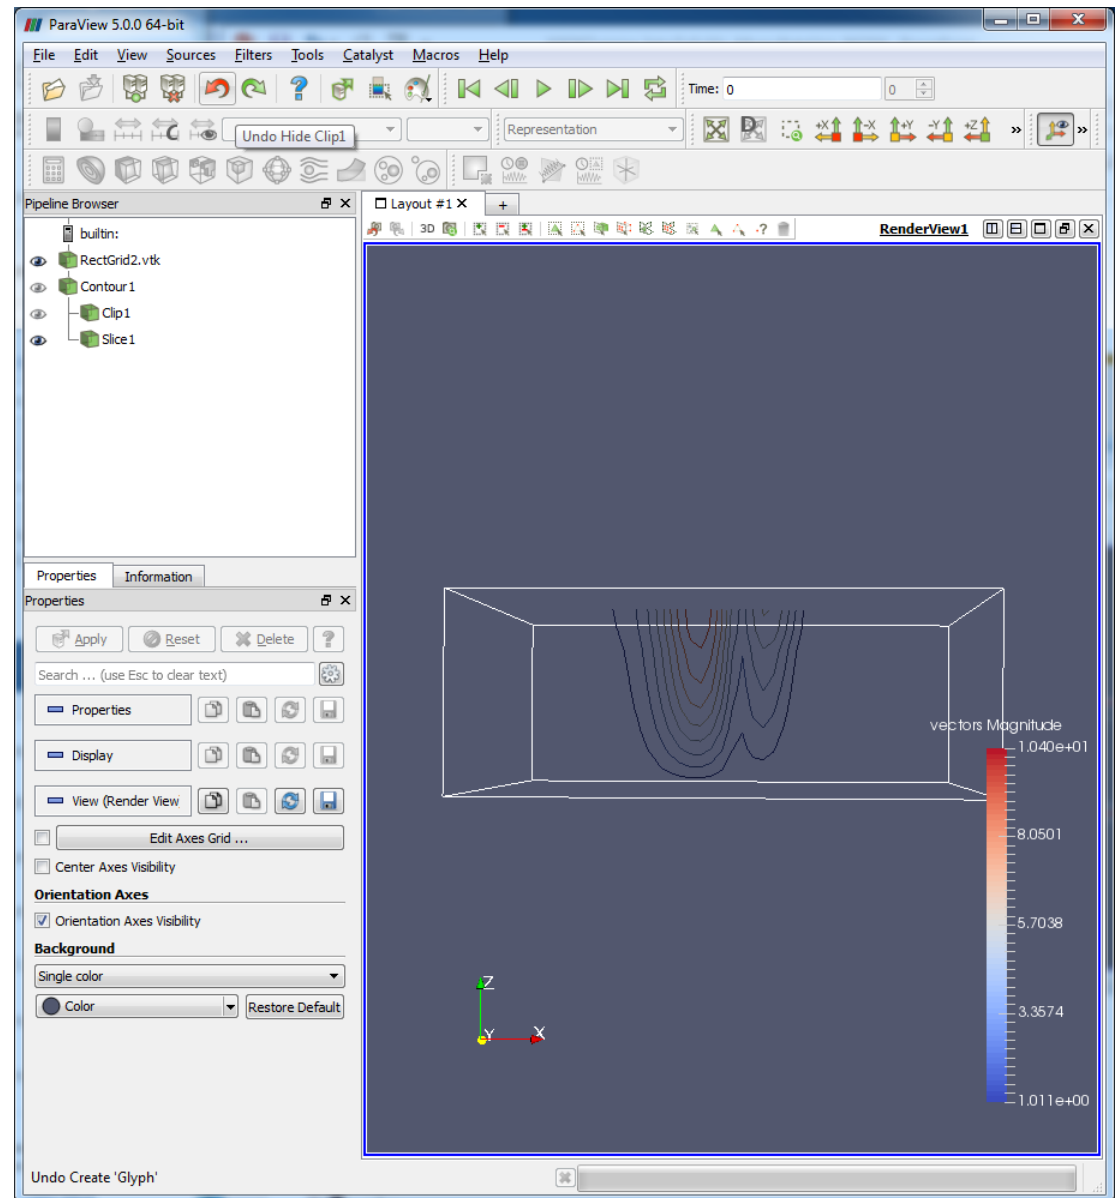

# SLICE ISOSURFACE

## SUMMARY OF STEPS

- Select **Clip1** Object
- Select **Filter**
- Select **Common**
- Select **Slice**
- Position Slicing Plane
- Click **Apply**

**Slice** - Intersects the geometry with a plane. The effect is similar to clipping except that all that remains is the geometry where the plane is located

# What have we done?

## Recall Three Basic Steps:

- First your data must be **read** into ParaView
- Next, you may apply any number of **filters** that process the data to generate, extract, or derive features from the data
- Finally, a viewable image is **rendered** from the data

Opened simple data file  
**RectGrid2.vtk**

Applied filters:  
**Contour, Slice, Clip**

# Let's try a more complex data set

**headsq.vti**

# In preparation for the next section

You should be here

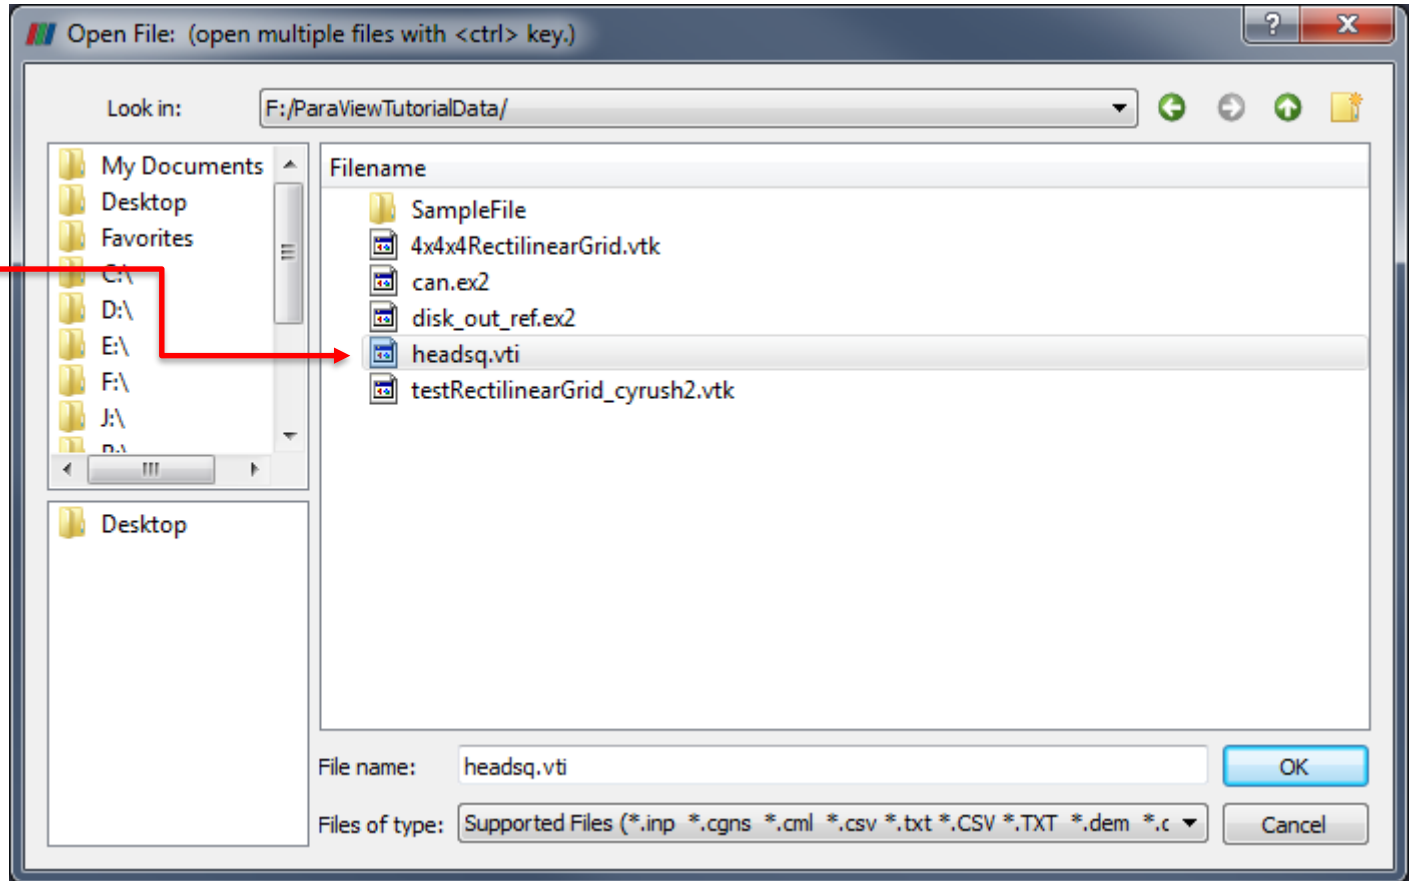

- Delete all objects in the Pipeline Browser
- Select an object in the Pipeline Browser
- Click the Delete button (or right click, then Delete)
- To select multiple objects press and hold the CTRL key while selecting objects

# Locate File: headsq.vti

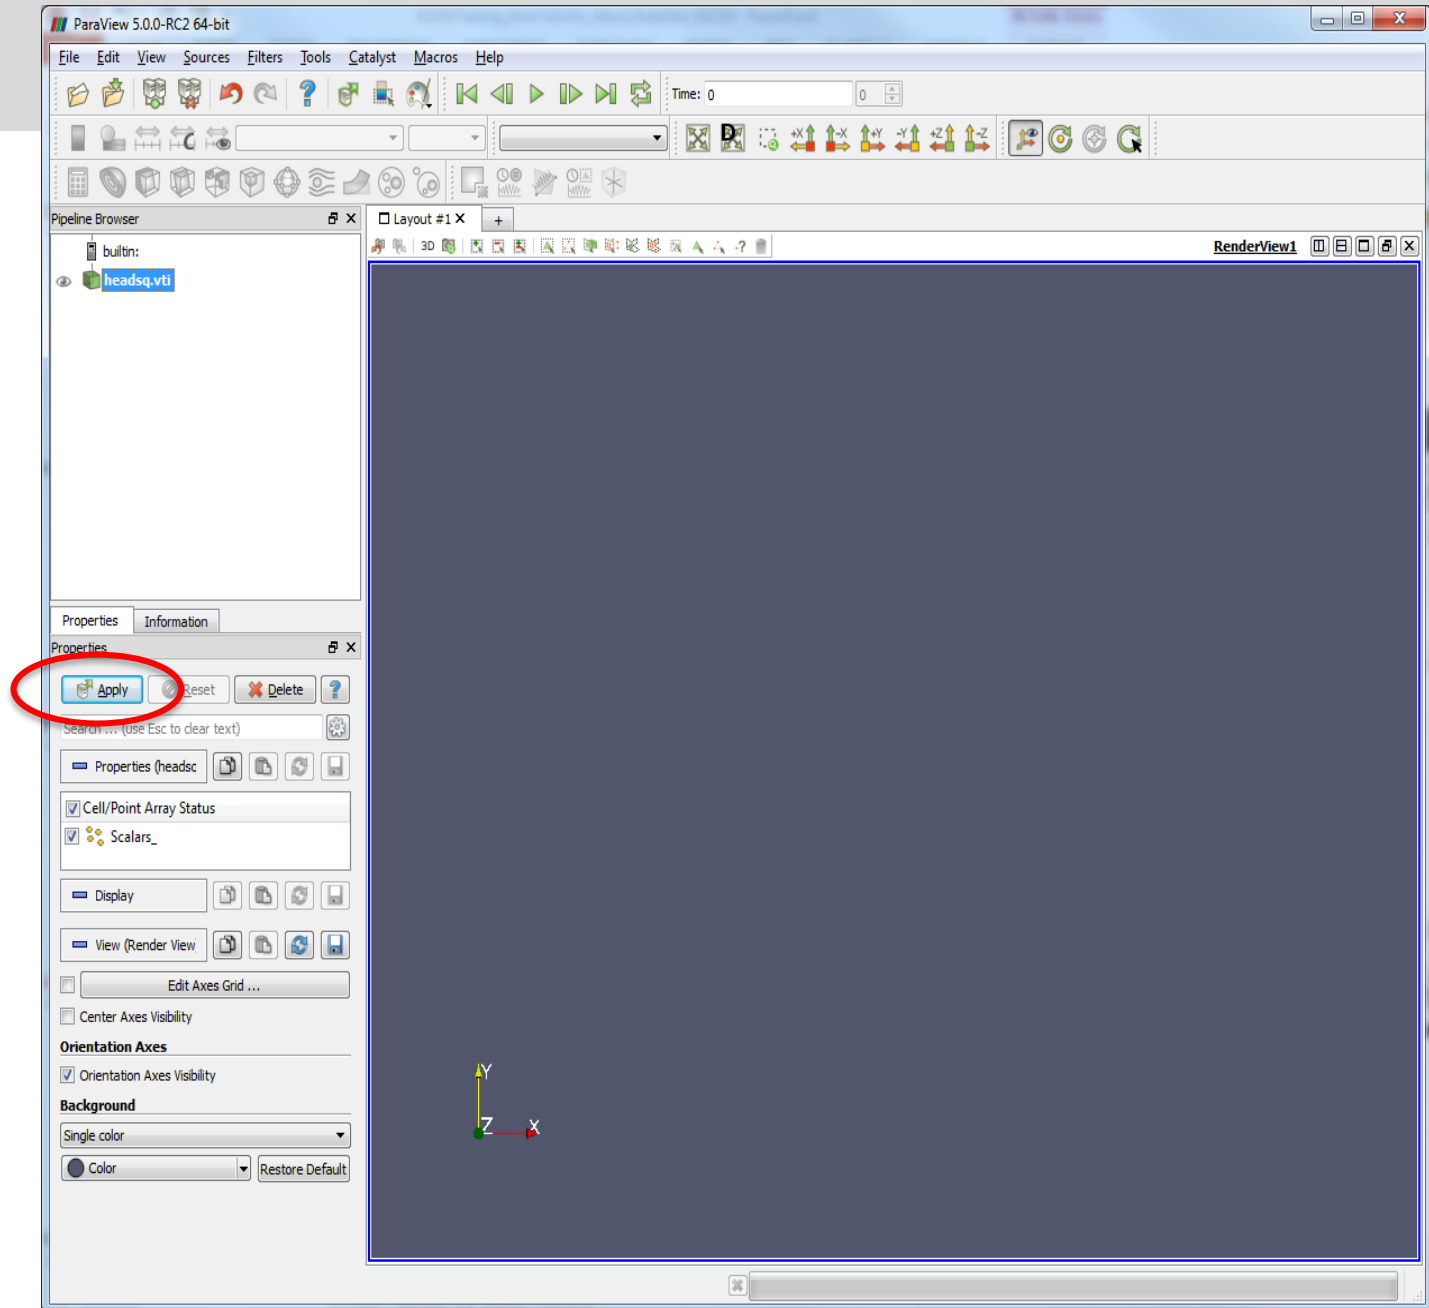

File  
Open

headsq.vti

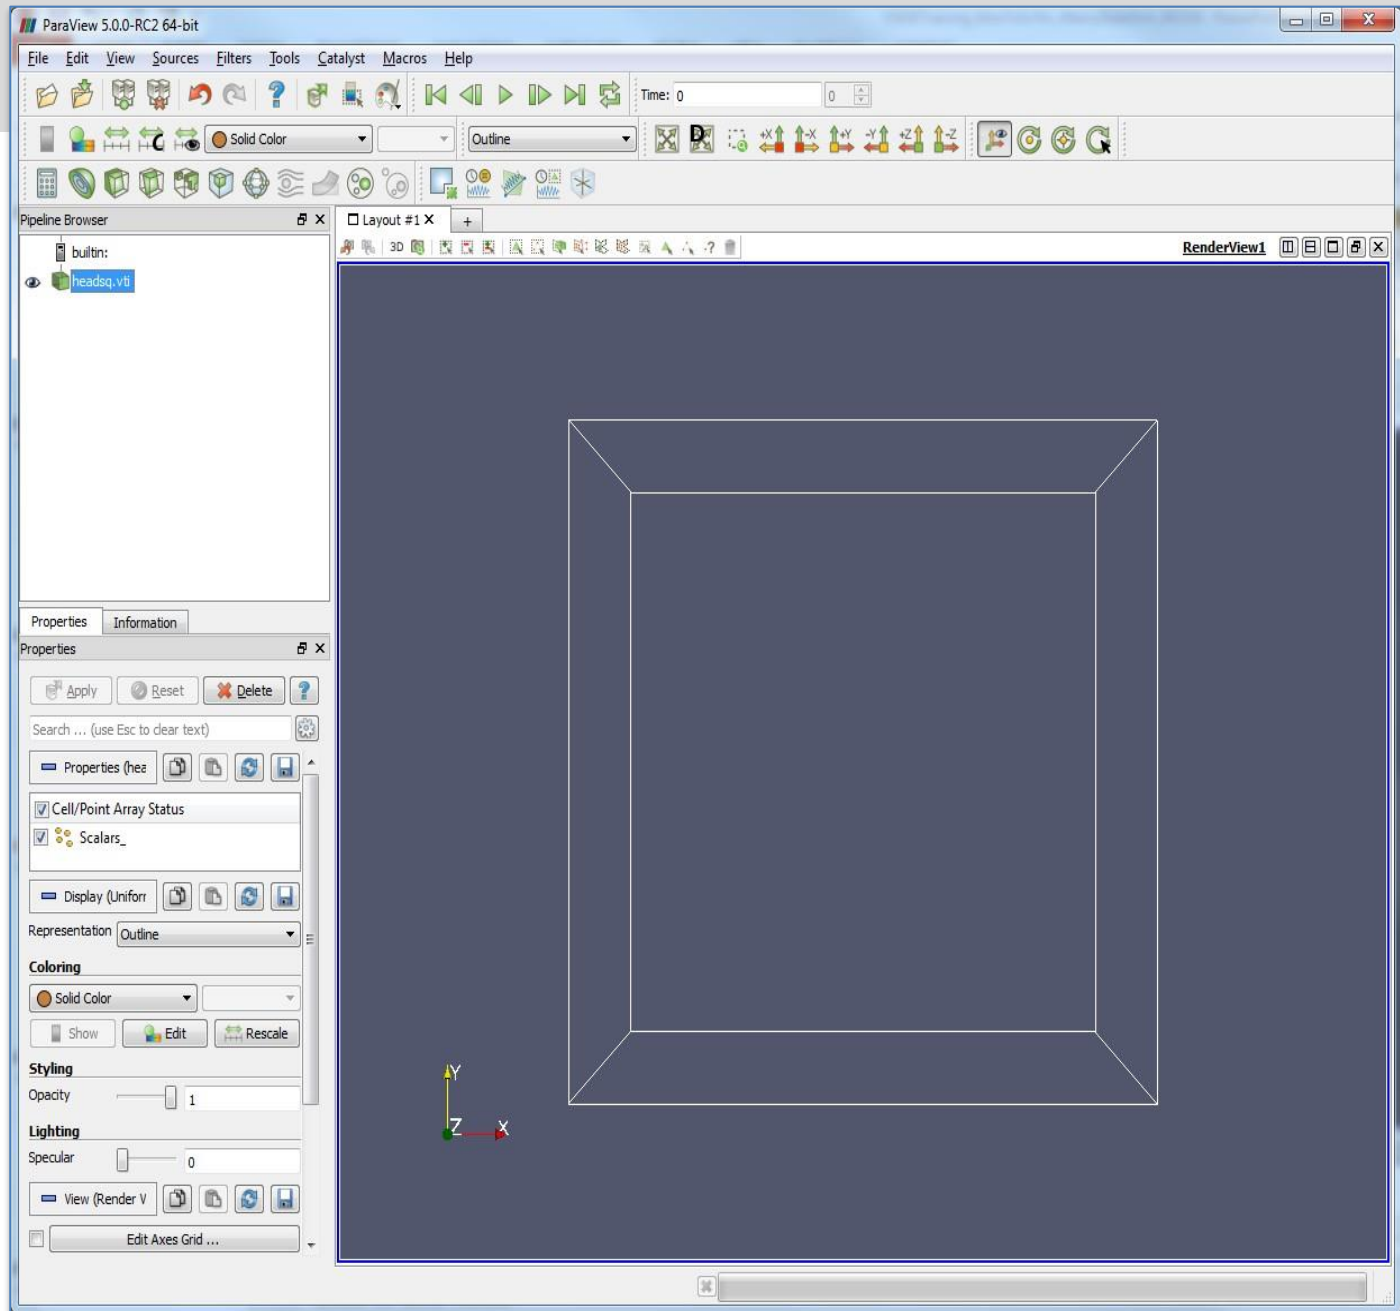

➤ New Object in Pipeline Browser

➤ Click **Apply**

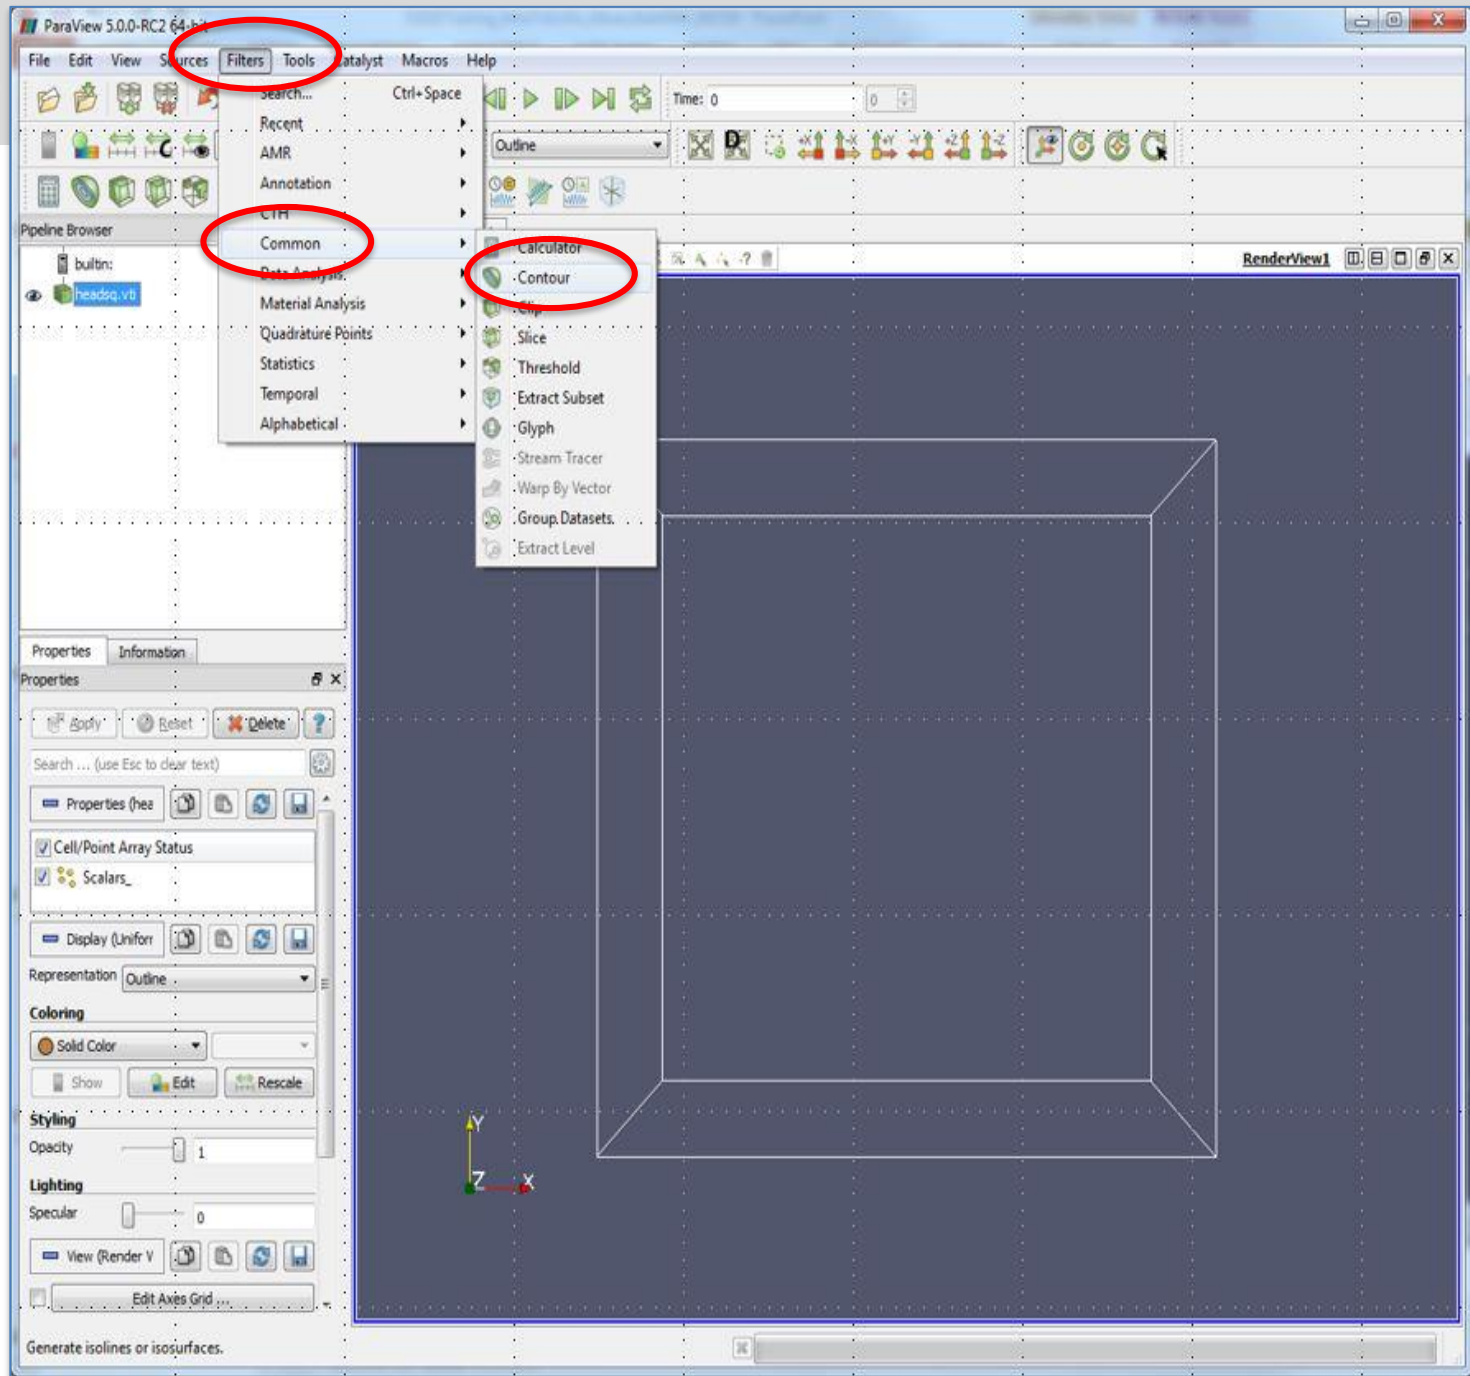

- Should see a bounding box in the 3D viewer window

# Create an Isosurface

Select:

- Filters
- Common
- Contour

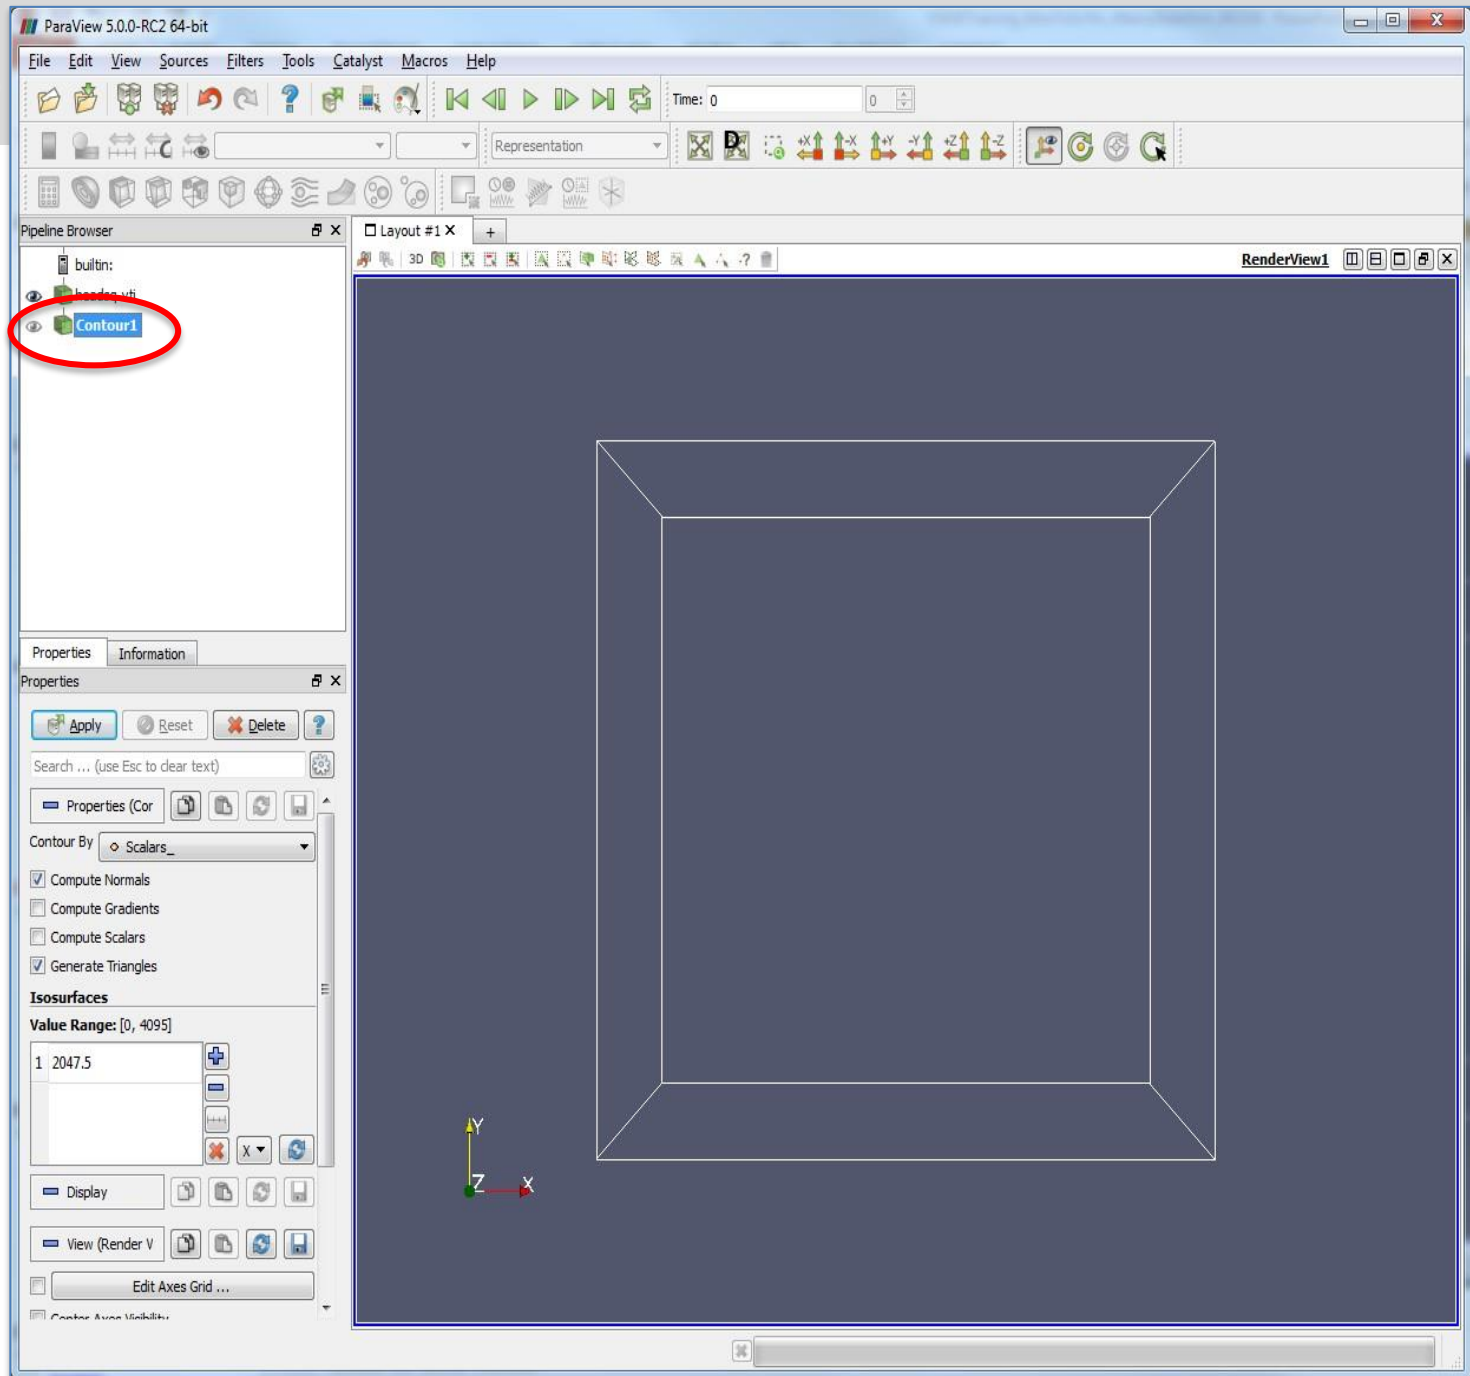

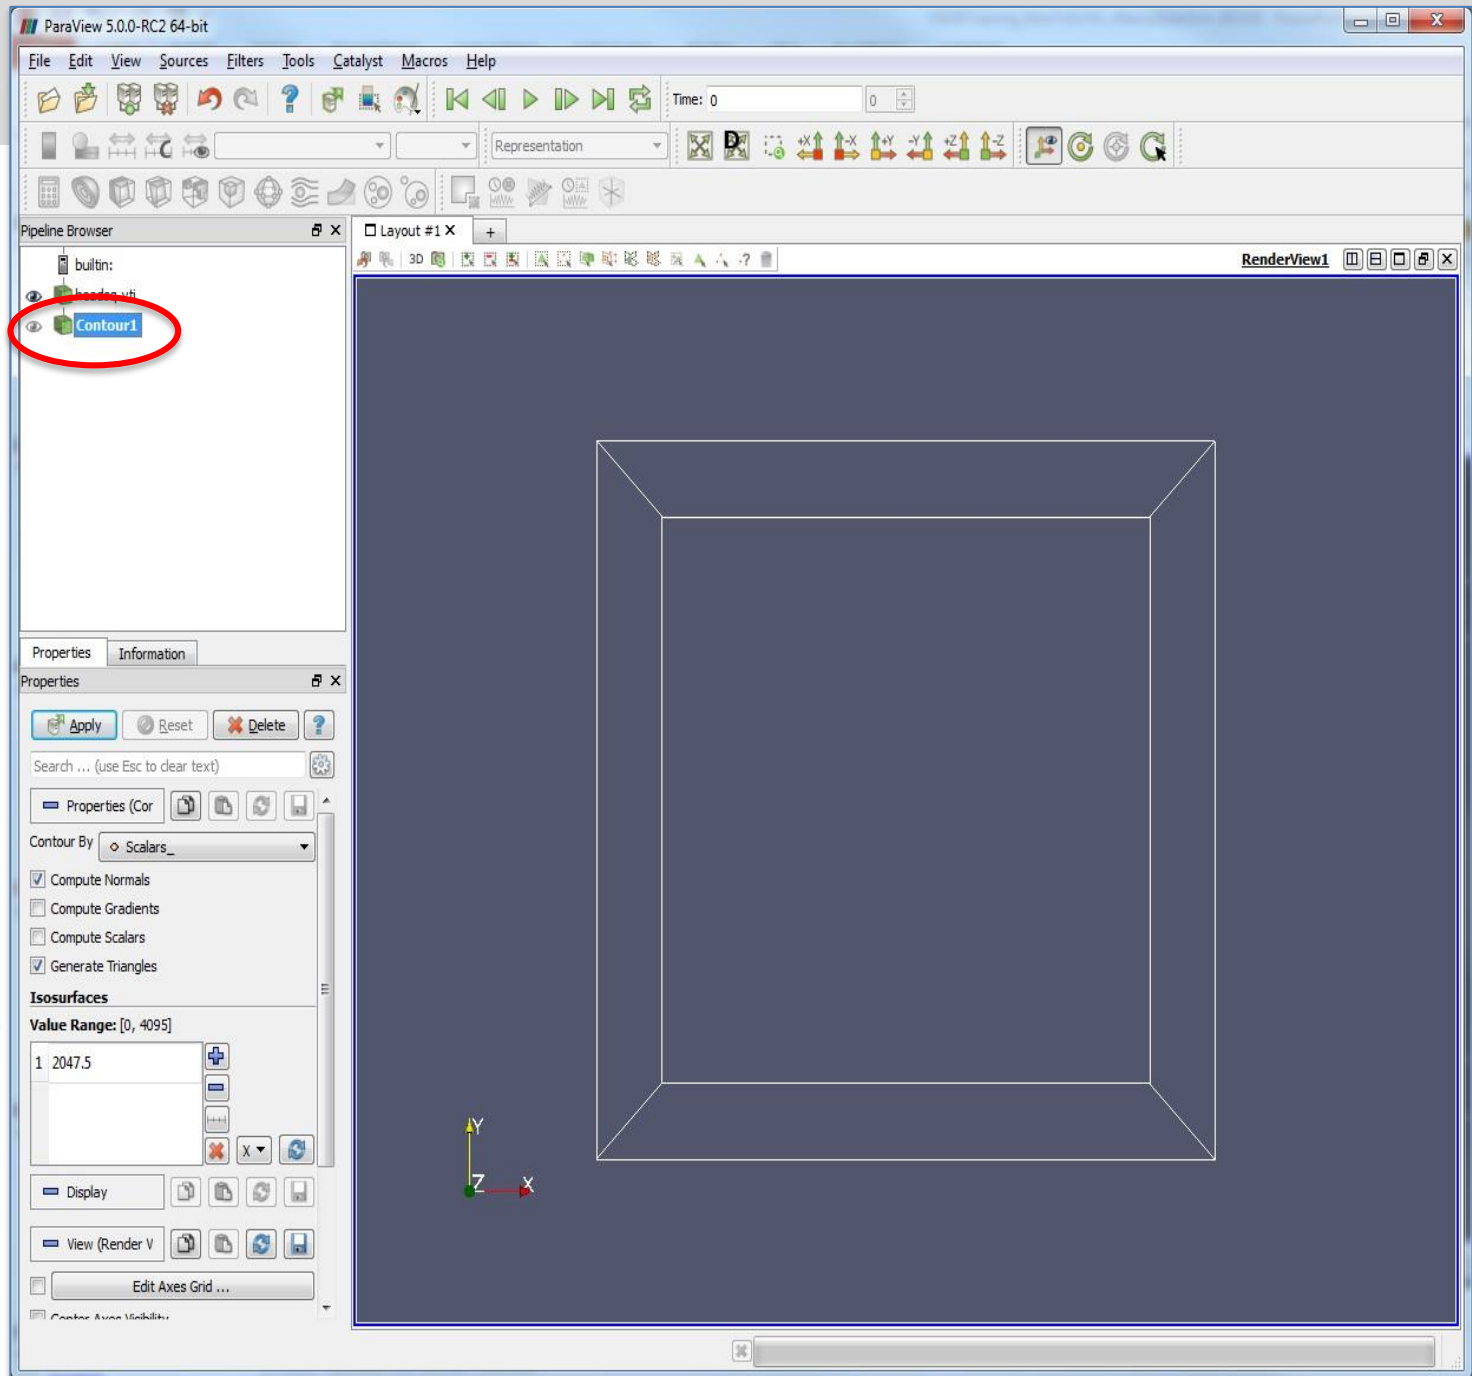

➤ A new object appeared in the pipeline browser (Contour 1)

**Contour** – Extracts the points, curves, or surfaces where a scalar field is equal to a user-defined value.

The surface is often also called an *isosurface*.

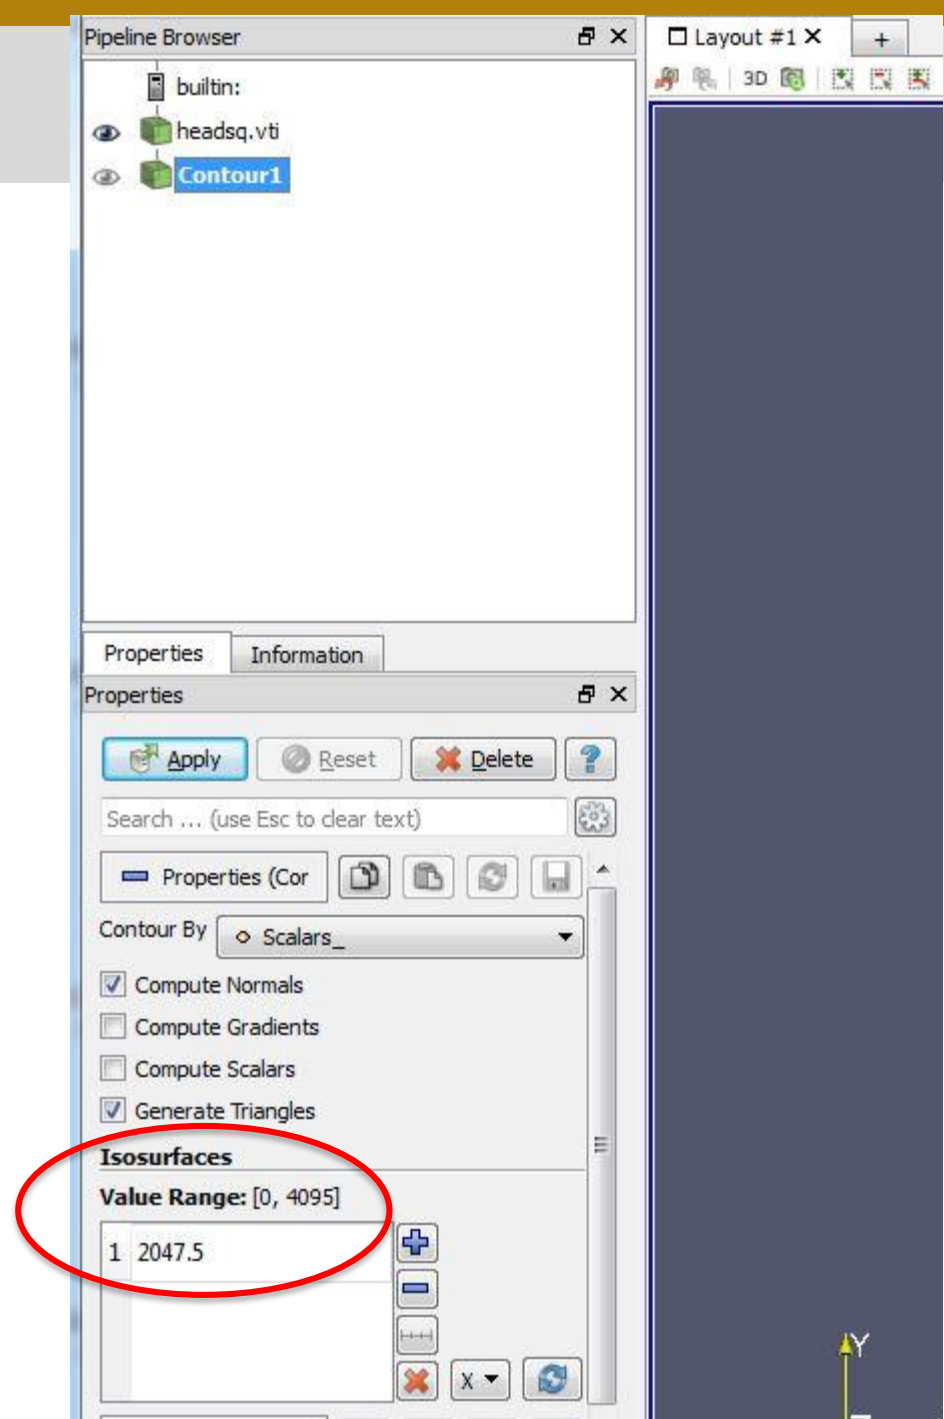

➤ Value Range for the data set is now visible

- Value Range for the data set is [ 0, 4095 ]
- Only one value is showing: 2047.5

The screenshot shows the ParaView interface. The Pipeline Browser on the left displays a pipeline with three nodes: 'builtin:', 'headsq.vti', and 'Contour1'. The 'Contour1' node is selected. The Properties panel on the right shows the 'Properties' tab for the selected node. The 'Contour By' dropdown is set to 'Scalars\_'. The 'Isosurfaces' section is highlighted with a red circle and shows a 'Value Range: [0, 4095]' and a table with one entry: '1 2047.5'.

# Many Options to Save Your Work

# Save Your Work

## Save State

save the state of the visualization pipeline itself, including all the pipeline modules, views, their layout, and their properties.

This is referred to as the application state or, just, state.

In paraview, you can save the state using the File Save State. . . menu option.

Conversely, to load a saved state file, you can use File Load State. . . .

# Save Your Work

## Save Data

You can save the dataset produced by any pipeline module in ParaView, including sources, readers, and filters.

To save the dataset in paraview, begin by selecting the pipeline module in the Pipeline browser to make it the active source.

For modules with multiple output ports, select the output port producing the dataset of interest.

To save the dataset, use the File Save Data menu or the button in the Main Controls toolbar. You can also use the keyboard shortcut Ctrl + S (or + S ).

The Save File dialog will allow you to select the filename and the file format. The available list of file formats depends on the type of the dataset you are trying to save.

# Save Your Work

## Save Screenshot

To save the render image from a view in paraview, use the File Save Screenshot menu option. This will pop up the Save Screenshot Options dialog (Figure 8.3).

This dialog allows you to select various image parameters, such as image resolution and image quality (which depends on the file format chosen).

# Save Your Work

## Save Screenshot continued . . .

The dialog also provides an option to change the color palette to use to save the image using **Override Color Palette**.

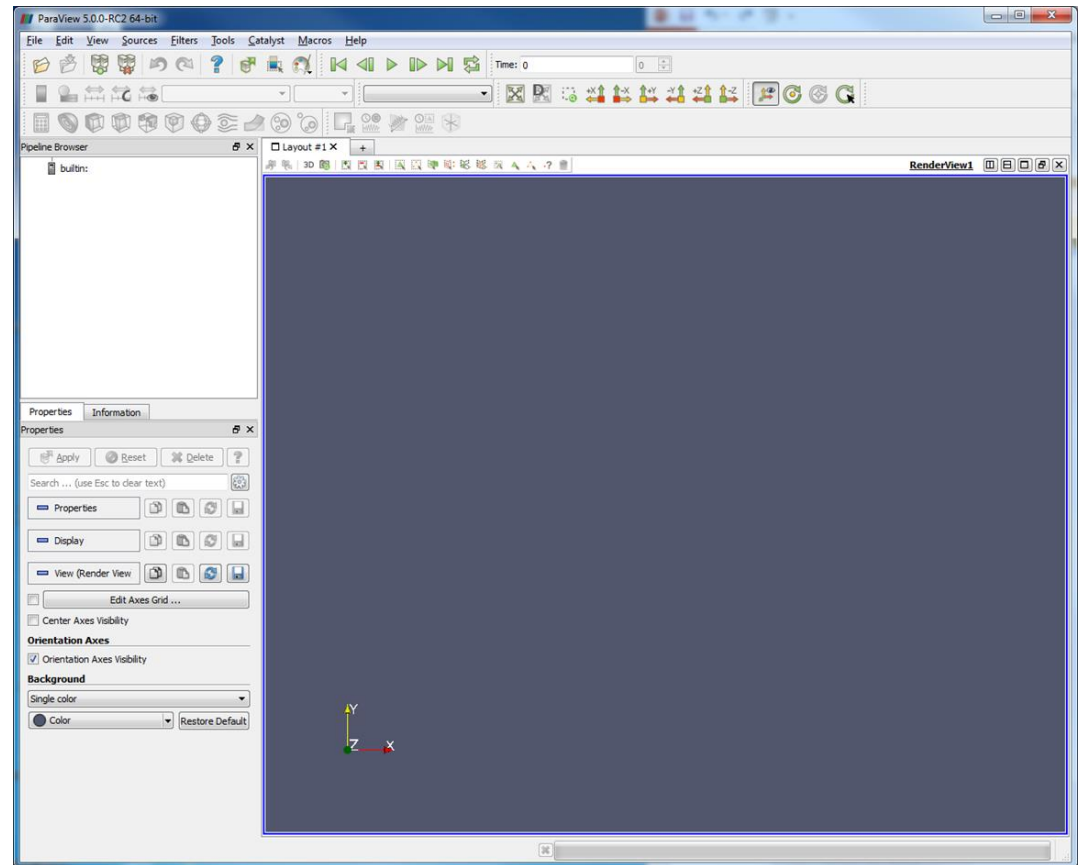

By default, paraview will save rendered results from the active view. Optionally, you can save an image comprising of all the views layed out exactly as on the screen by unchecking the **Save only selected view** button.

# In preparation for the next section

You should be here

- Delete all objects in the Pipeline Browser
- Select an object in the Pipeline Browser
- Click the Delete button (or right click, then Delete)
- To select multiple objects press and hold the CTRL key while selecting objects

# Getting Your Data Into VTK File Format

## Sample File

# Supported Data Formats

- VTK (<http://www.vtk.org/VTK/img/file-formats.pdf>)
- EnSight
- Plot3D
- Various polygonal formats
- Users can write data readers to extend support to other formats
- Conversion to the VTK format is straightforward

# VTK Simple Legacy Format

VTK simple legacy format (<http://www.vtk.org/VTK/img/file-formats.pdf>)

- ASCII or binary
- Supports all VTK grid types
- Easiest for data conversion

```
# vtk DataFile Version 2.0           ](1)
Really cool data                       ](2)
ASCII | BINARY                         ](3)
DATASET type                          ](4)
...
POINT_DATA n                          ](5)
...
CELL_DATA n
...
```

**Part 1:** Header

**Part 2:** Title (256 characters maximum, terminated with newline `\n` character)

**Part 3:** Data type, either ASCII or BINARY

**Part 5:** Dataset attributes. The number of data items *n* of each type must match the number of points or cells in the dataset. (If *type* is FIELD, point and cell data should be omitted.)

**Part 4:** Geometry/topology. *Type* is one of:

```
STRUCTURED_POINTS
STRUCTURED_GRID
UNSTRUCTURED_GRID
POLYDATA
RECTILINEAR_GRID
FIELD
```

# Simulated Temperature

## The data

- Simulated temperature values
- Sample size: 100 x 100
- Rectilinear Grid

| 100   | 100   |       |       |       |       |       |       |  |
