

Technology at work: The future of employment

Michael A Osborne @maosbot

Why would we want a machine to learn and act rather than a human?

Judges are significantly more lenient after a food break (Danziger et al 2011).

Please list what it would it
take for an algorithm to
automate your job.

Please try to convince your partner that **their job is automatable.**

Retail and sales jobs will be increasingly affected by automation.

The Innovators:
by Walter Isaacson
Average Customer
Available for down

Big data analysis is automating **paralegal, contract law and patent law** tasks.

OXFORD
MARTIN
SCHOOL

“a lot of people who used to be allocated to conduct document review are no longer able to be billed out” [NYTimes, 2011].

Robotic process automation is automating clerical work.

OXFORD
MARTIN
SCHOOL

Accounting and auditing are also being automated by smart software.

Halo for Journals

Overview | What Halo can do | How Halo works

intuit®

TurboTax® 

Many **logistics tasks** are now being automated with the use of machine learning and mobile robotics technologies.

Vehicles will be **recording their environment constantly**, generating big data with consequences for insurance, law enforcement, mining and meteor detection.

Chelyabinsk, 2013

So, if machines can drive, serve customers,
and look through data, for **what are humans
still good?** We suggest:

creativity

**and social
intelligence.**

Autonomous manipulation is also hard.

OXFORD
MARTIN
SCHOOL

Precisely, manipulation in unstructured environments is difficult to automate.

Will an **algorithm steal your job?** Perhaps an **algorithm can tell us!** We used a Gaussian process to classify the automatability of occupations using data from the US.

Job Title	Persuasion	Originality	Social Perceptiveness	Fine Arts
Administrative Services Managers	46	41	52	0
Tax Examiners and Collectors and Revenue Agents	45	39	43	0
Accountants and Auditors	45.5	41	44.5	0
Budget Analysts	37	41	41	0
Loan Officers	45	30	43	0
Tax Preparers	37	34	37	0

What is the probability of automatability for US insurance underwriters?

1. Between 0.00 and 0.25.
2. Between 0.25 and 0.50.
3. Between 0.50 and 0.75.
4. Between 0.75 and 1.00.

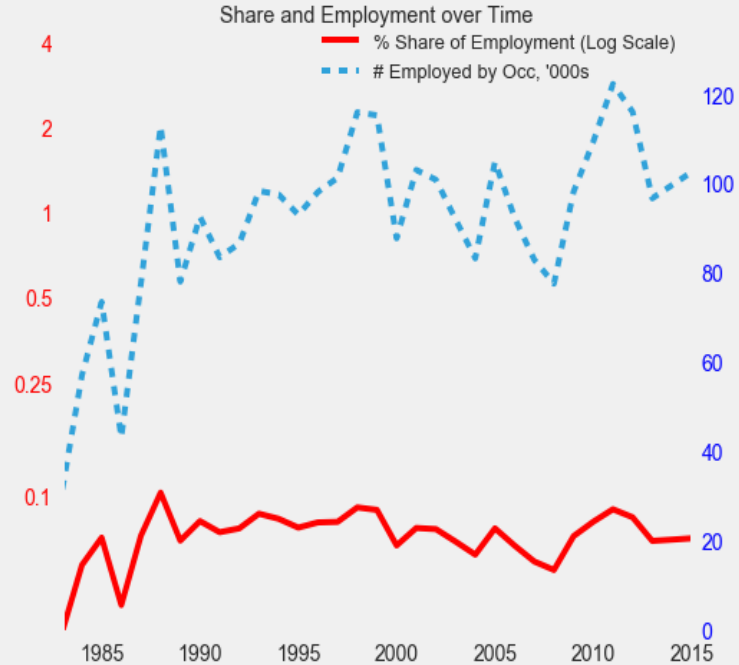

What is our probability of automatability for US insurance underwriters?

1. Between 0.00 and 0.25.
2. Between 0.25 and 0.50.
3. Between 0.50 and 0.75.
4. Between 0.75 and 1.00: the probability is 0.99!

Insurance Underwriters (13-2053.00)

What is the probability of automatability for US mechanical engineers?

1. Between 0.00 and 0.25.
2. Between 0.25 and 0.50.
3. Between 0.50 and 0.75.
4. Between 0.75 and 1.00.

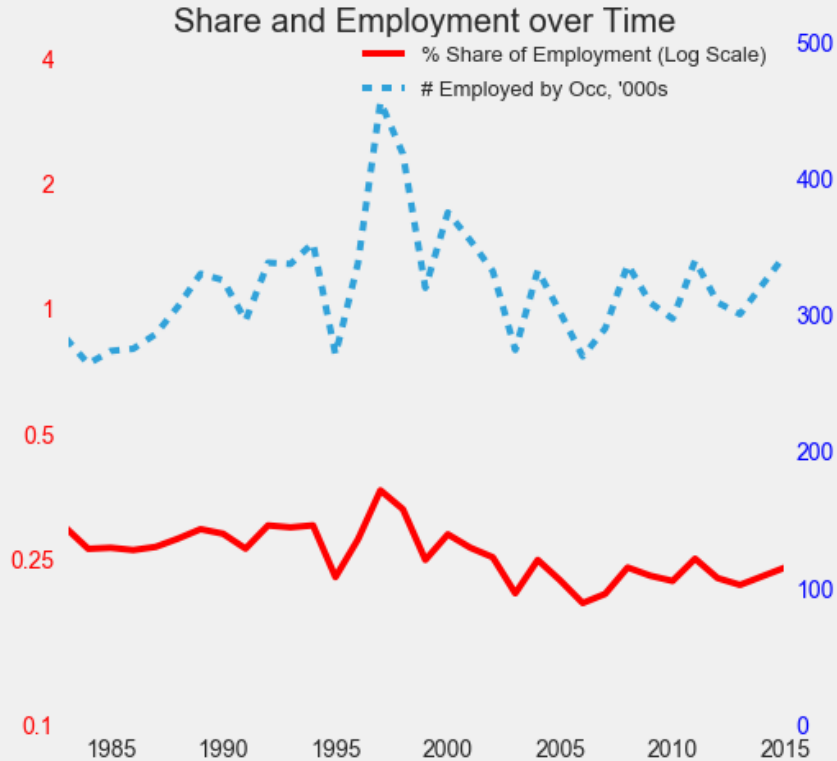

What is our probability of automatability for US mechanical engineers?

1. Between 0.00 and 0.25: the probability is 0.01.
2. Between 0.25 and 0.50.
3. Between 0.50 and 0.75.
4. Between 0.75 and 1.00.

Mechanical Engineers (17-2141.00)

EMPLOYMENT SHARES

Occupation	Label	Probability
Data Entry Keyers	1	0.99
Tax Preparers		0.99
Umpires and Referees		0.98
Paralegals and Legal Assistants	1	0.94
Waiters and waitresses	0	0.94
Slaughterers		0.60
Economists	0	0.43
Financial Analysts		0.23
Lawyers	0	0.03
Choreographers		0.00

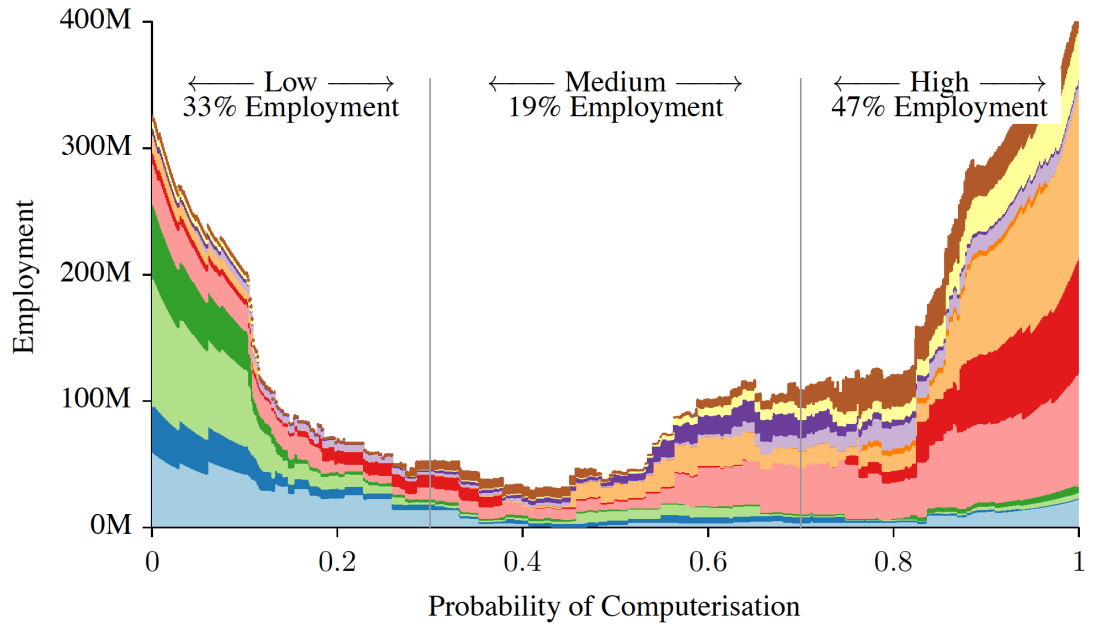

We predict that **high-skilled jobs are relatively resistant** to computerisation.

- Management, Business, and Financial
- Computer, Engineering, and Science
- Education, Legal, Community Service, Arts, and Media
- Healthcare Practitioners and Technical
- Service
- Sales and Related
- Office and Administrative Support
- Farming, Fishing, and Forestry
- Construction and Extraction
- Installation, Maintenance, and Repair
- Production
- Transportation and Material Moving

USA

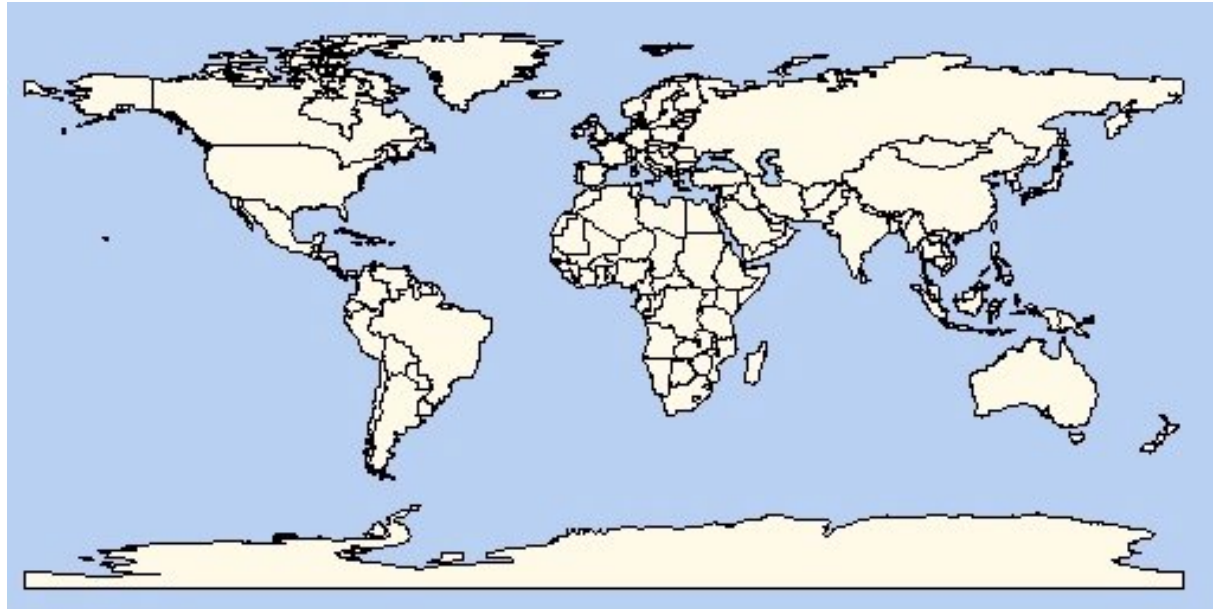

Which country has the greatest fraction of jobs at high risk of automation?

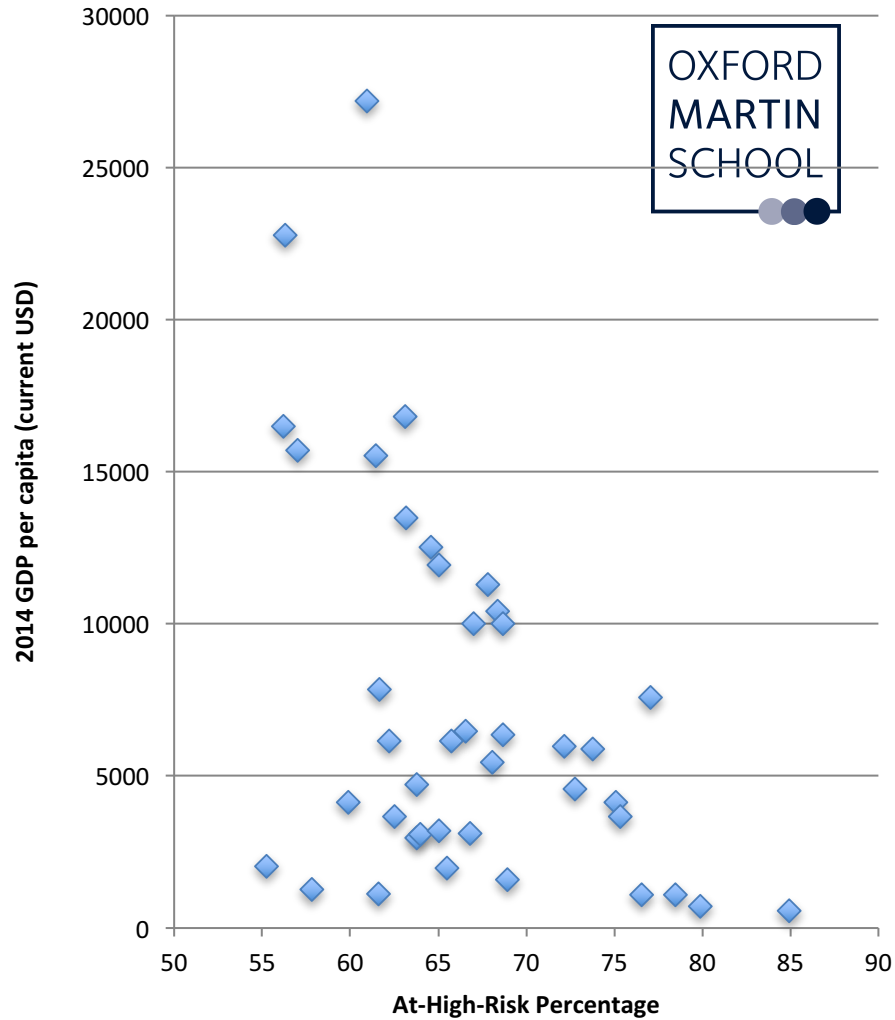

1. Albania
2. Bangladesh
3. Ethiopia
4. Uzbekistan

Which country has the greatest fraction of jobs at high risk of automation?

1. Albania
2. Bangladesh
3. Ethiopia
4. Uzbekistan

In 1900, 40% of US workers were farmers; in 1999, the figure was 2%.

In 1900, unemployment was 5%; in 1999, it was 4.2%.

Will new technologies threaten the historical pattern of employment resisting technological change?

UK, 2000-2015

New occupations are being created.

New occupations are being created.

New industries have emerged, but they're not employing many.

Decade

Fraction of the US workforce
employed in new industries

1980s

8.2%

1990s

4.4%

2000s

0.5%

In 1910 A.J Fischer was granted a patent for the first electric-powered washing machine

Laundresses employed in private U.S. households (in hundreds)

Source: Sobek, Matthew , "Detailed occupations – all persons: 1850–1990 in Historical Statistics of the United States, Earliest Times to the Present: Millennial Edition.

Household income has stagnated in the US.

Data Source: Based on data from the Luxembourg Income Study.

It was some time until the **English industrial revolution** benefited most workers.

Income inequality in the UK over 700 years (1290-2010)

Share of total income going to the top 5% of income earners

All series refer to *pre-tax* incomes

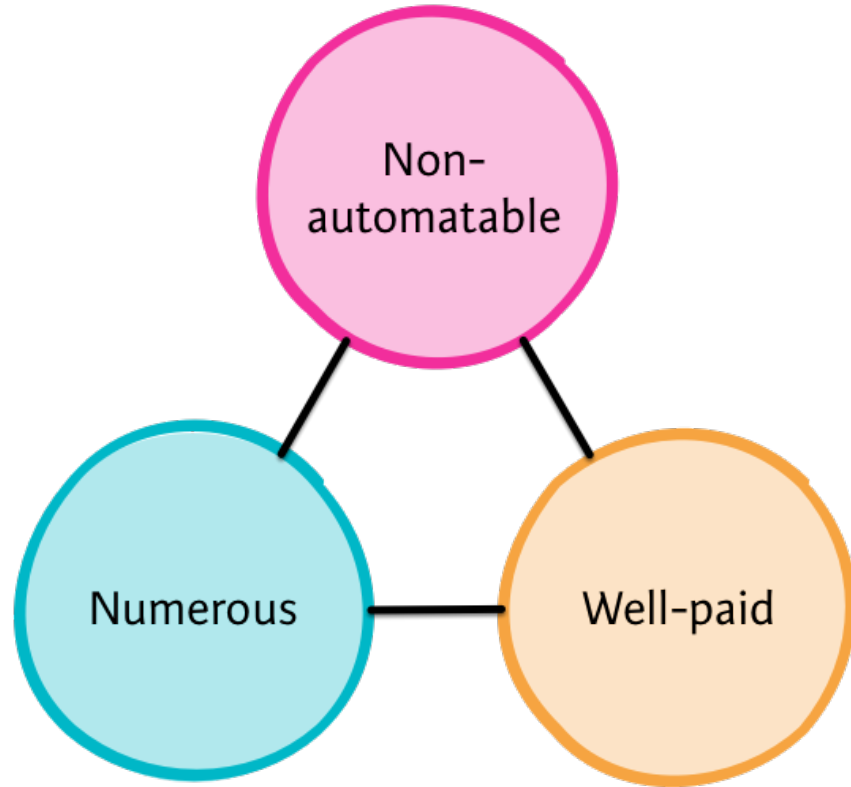

If we choose to try to automate the i th occupation, our expected utility is

$$\mathbb{E}(U(i)) = p_i N_i W_i,$$

where p_i is the probability of automation, N_i is employment, and W_i is wage.

Jobs can possess only **two of three features**.
