

V muzejih moramo ohranjati tudi genomski zapis primerkov

mag. Slavko Polak

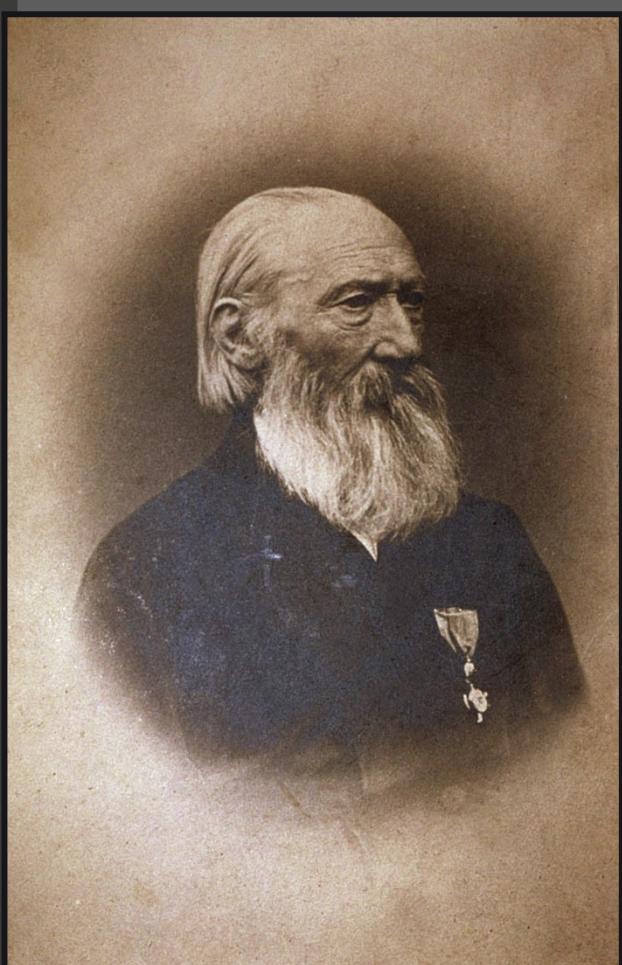

Notranjski muzej Postojna

V Prirodoslovnem muzeju Slovenije
Ob Evropskem letu kulturne dediščine

četrtek, 7. junij 2018

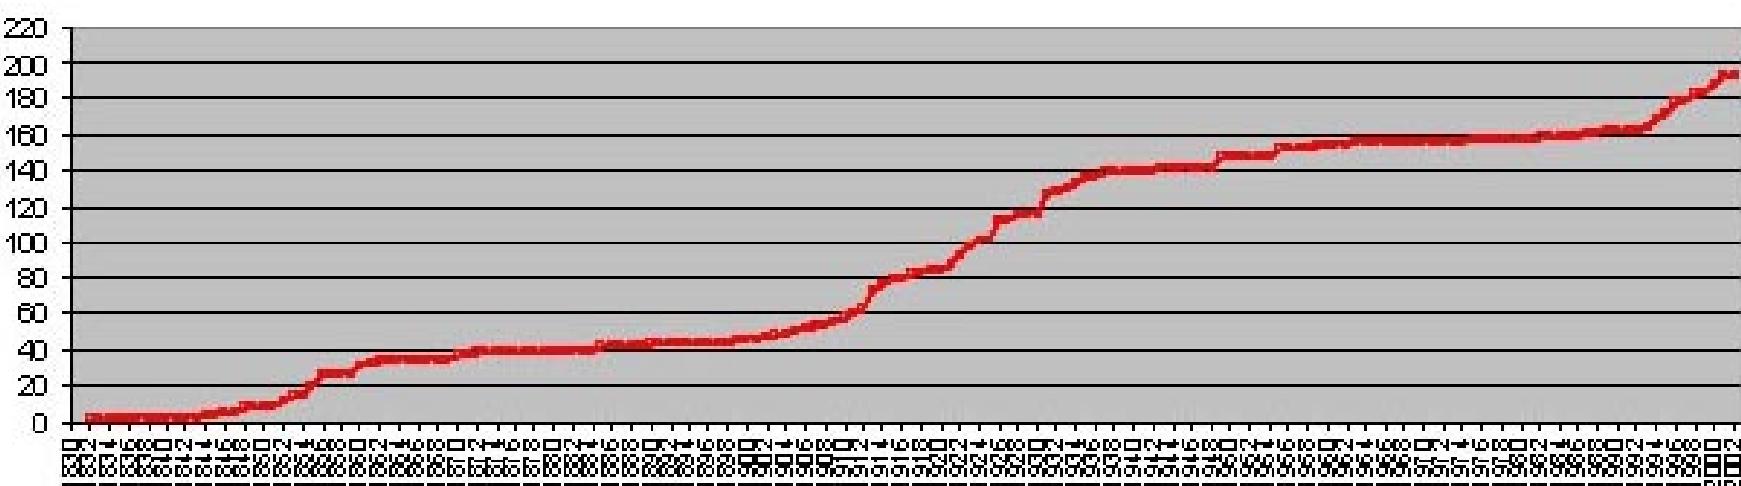

V muzejih moramo ohranjati tudi genomski
zapis primerkov

*Leptodirus
hochenwartii*, Schmidt
1832

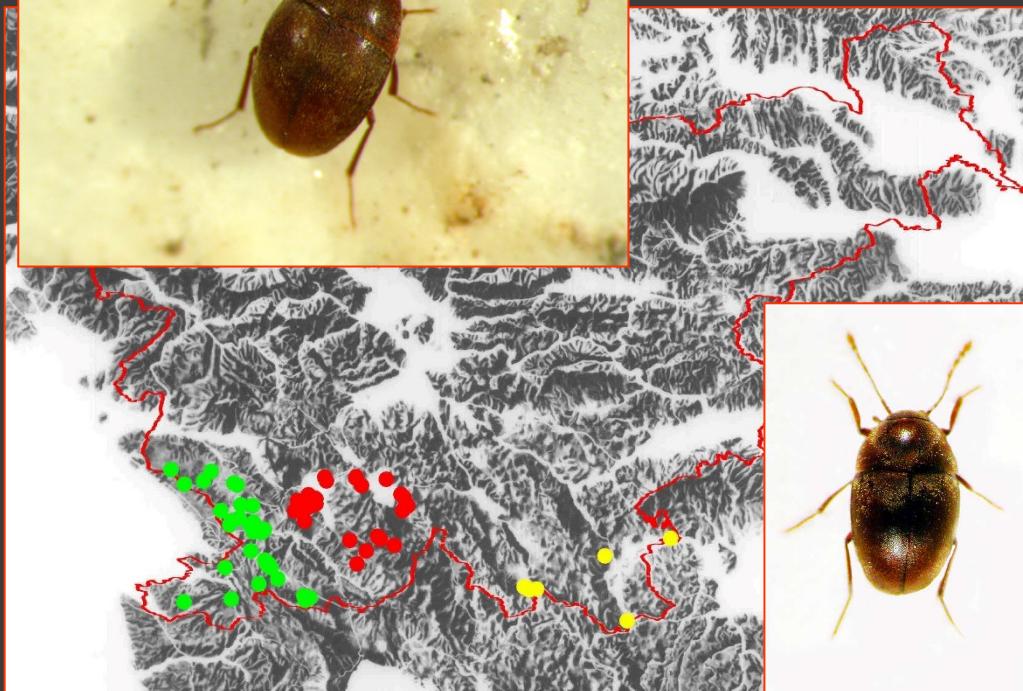

V muzejih moramo ohranjati tudi genomski zapis primerkov

V muzejih moramo ohranjati tudi genomski zapis primerkov

Bathysciotes khevenhuelleri L. Miller, 1851

- No. vrst : 1 podvrst: 2 (3)
- Status: troglobiont,
- Biogeografija:
- SZ dinarska
- 142 podatkov
- 78 lokalitet
- n.m.višina:
- *B. k. khevenhuelleri*
- 504 - 1145 m
- *B. k. tergestinus*
- 95 - 585 m
- *B. k. ssp*
147 - 530 m
- Izbira habitata: kapniške jame, MSS

V muzejih moramo ohranjati tudi genomski zapis primerkov

Ahthroherponina Jeannel, 1910; Bathysciina Horn, 1880; Bathysciotina Guéorguiev, 1974; Leptodirina Lacordaire, 1854; Pholeuina Reitter, 1886, Spelaeobatina Guéorguiev, 1947 & Platycholeina Horn, 1880.

Jamski hrošči PODZEMLJARJI (Leptodirini)

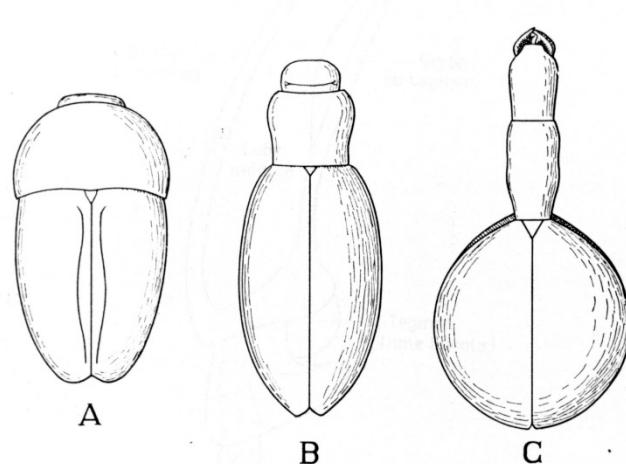

FIG. V. — Formes du corps chez les Bayhysciinae.

A. Forme bathyscioïde (*Bathysciola*).

B. Forme pholeuonide (*Pholeon*).

C. Forme leptodiroïde (*Leptodirus*).

D. Forme scaphoïde (*Remyella* mâle).

Jamski hrošči PODZEMLJARJI (Leptodirini)

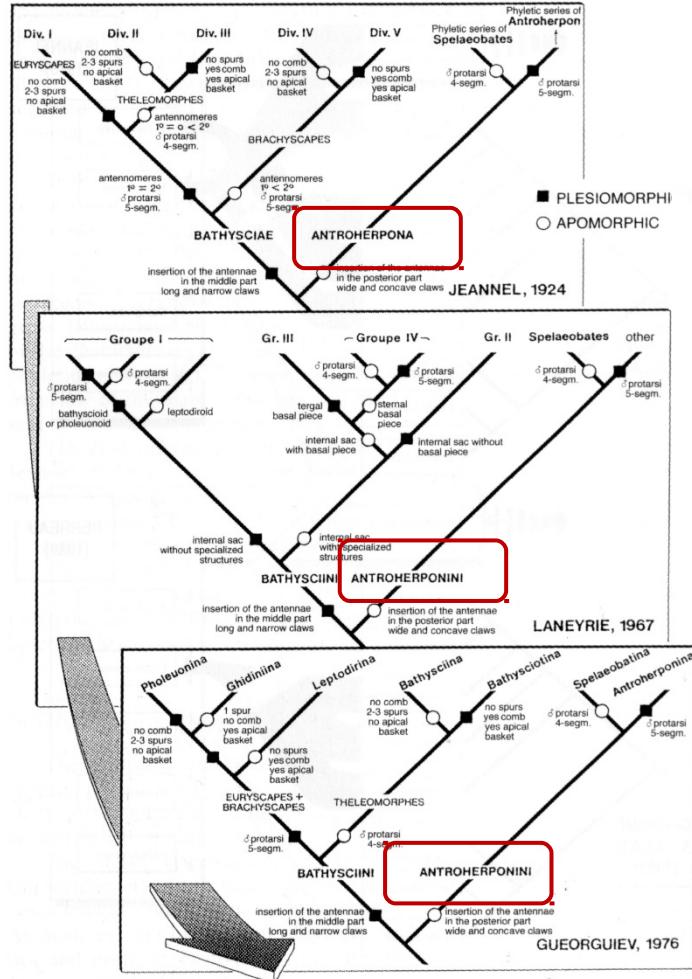

Fig. 2 - Classifications of subfam. Leptodirinae, transformed into phylogenetic trees, as proposed by Jeannel (1924), Laneyrie (1967) and Guéorguiev (1976) (from Casale et al., 1991).

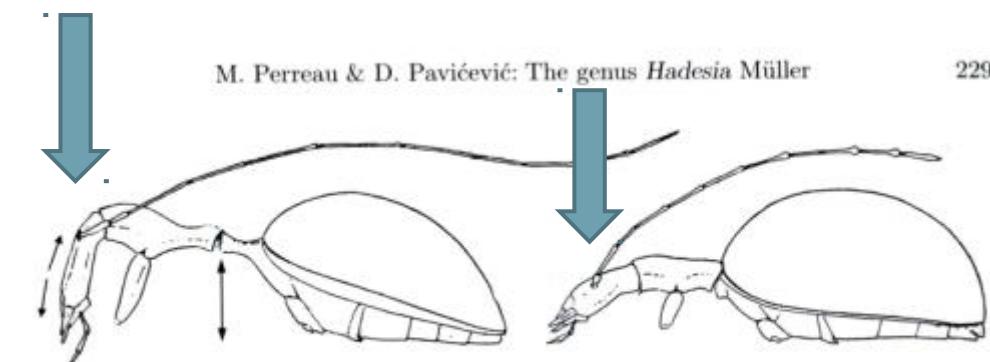

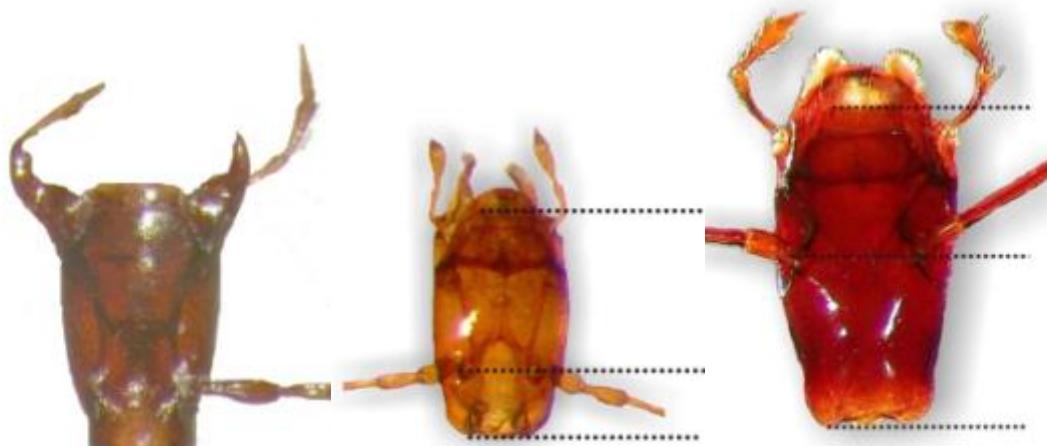

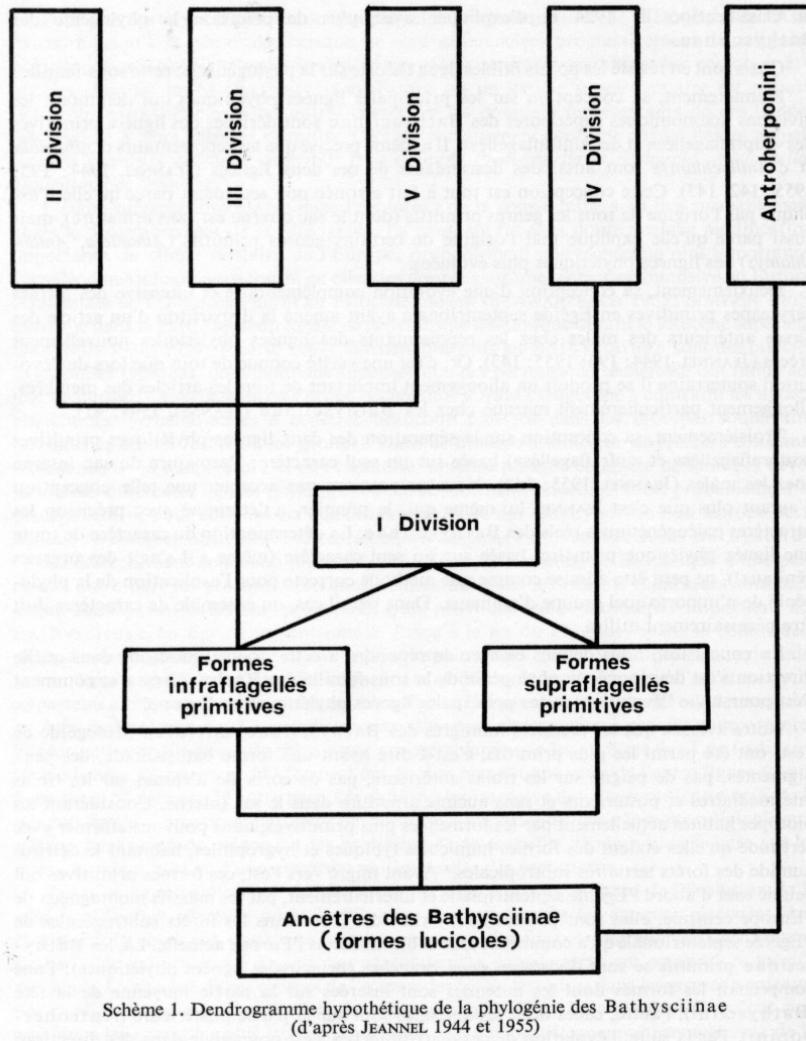

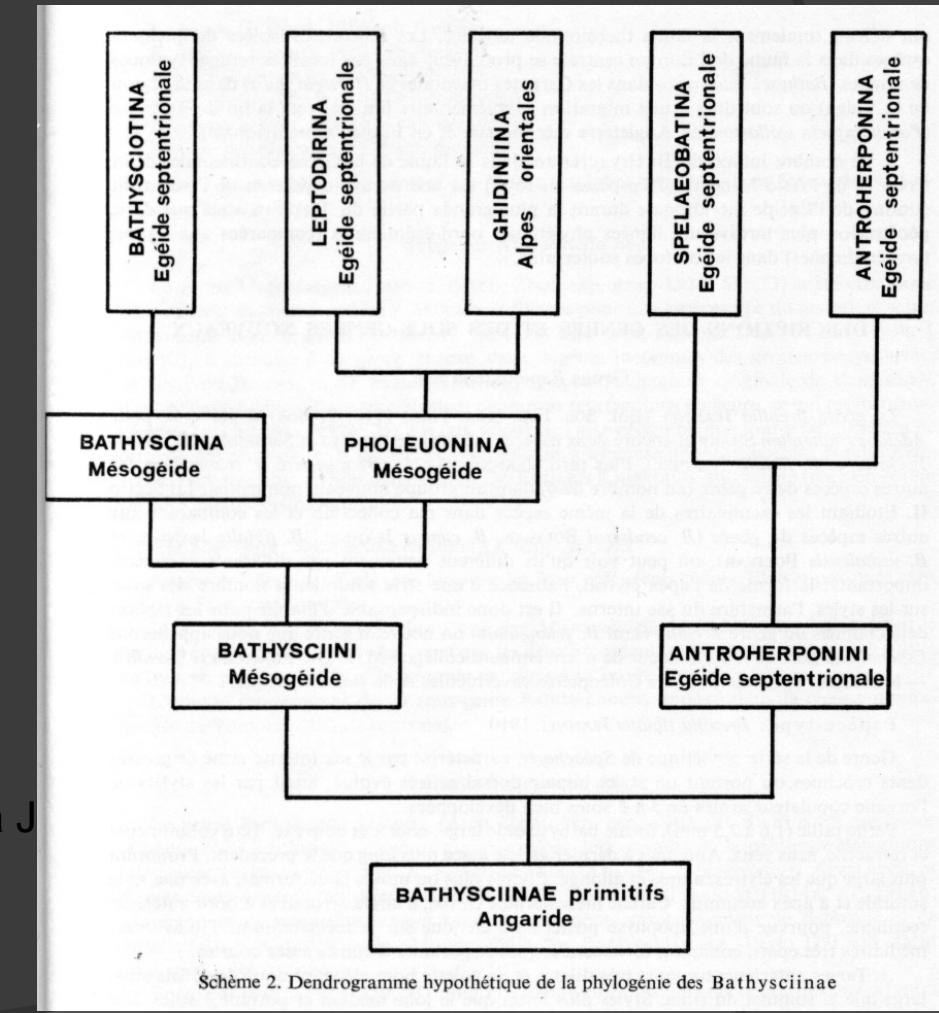

Figure 38. Right: lateral view of *Leptodirus hochewarti* Schmidt, head horizontal. Left: lateral view of *Anthroherpon primitivum* Absolon, head vertical, with elongation of the forehead (from Jeannel, 1924, modified).

V muzejih moramo ohranjati tudi genomski zapis primerkov

Schème 1. Dendrogramme hypothétique de la phylogénie des Bathysciinae
(d'après JEANNEL 1944 et 1955)

Schème 2. Dendrogramme hypothétique de la phylogénie des Bathysciinae

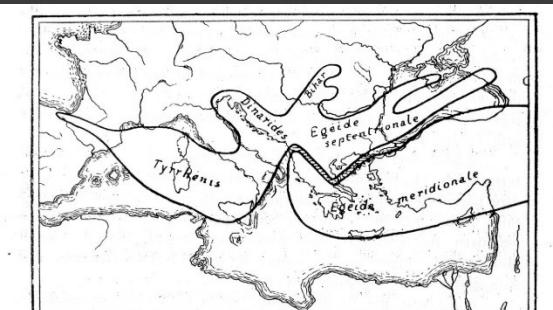

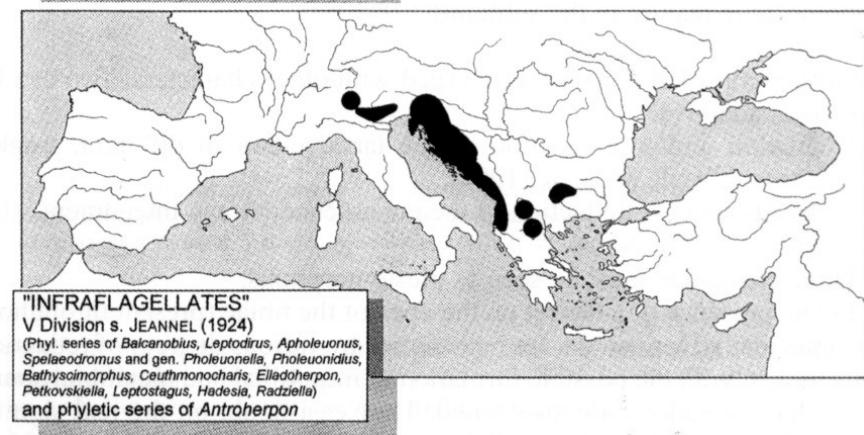

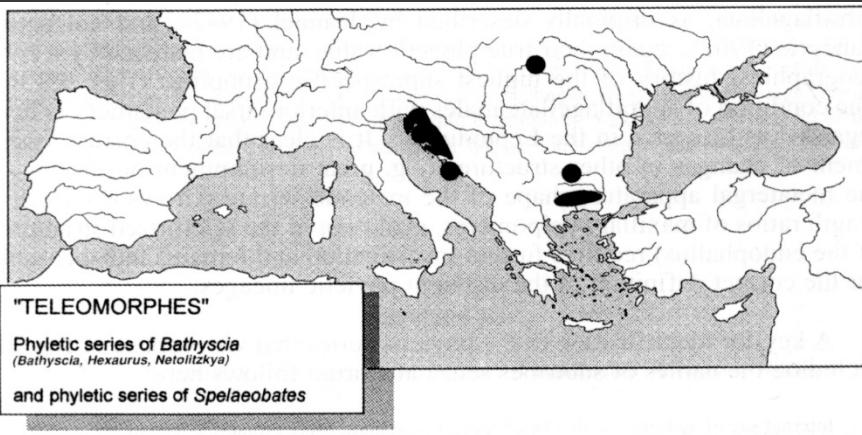

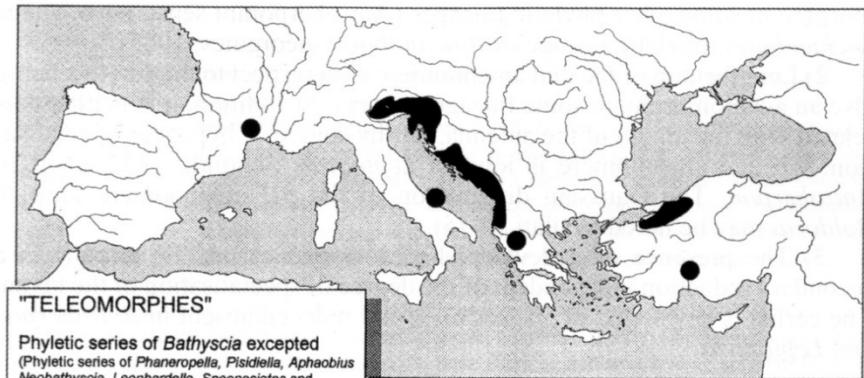

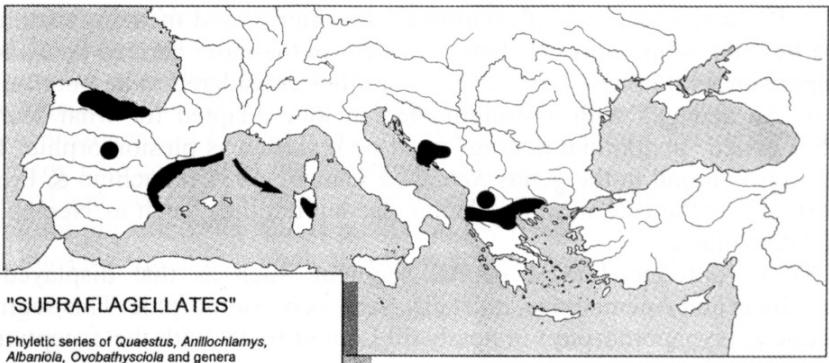

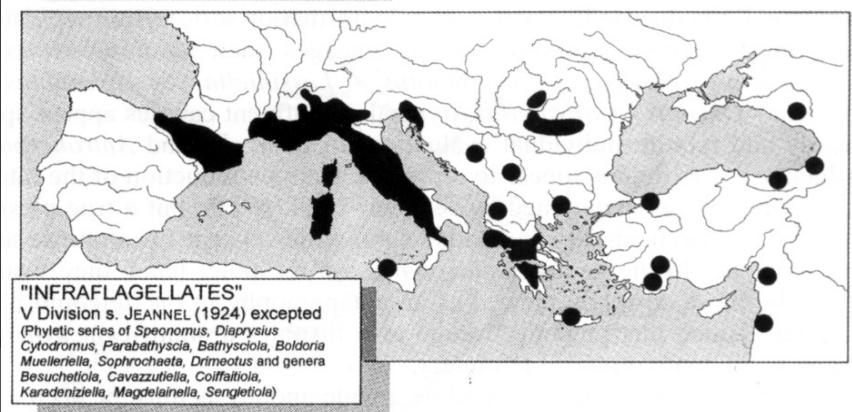

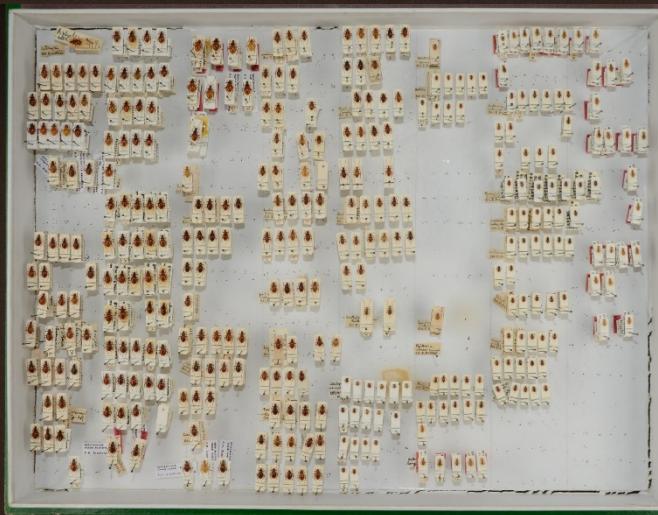

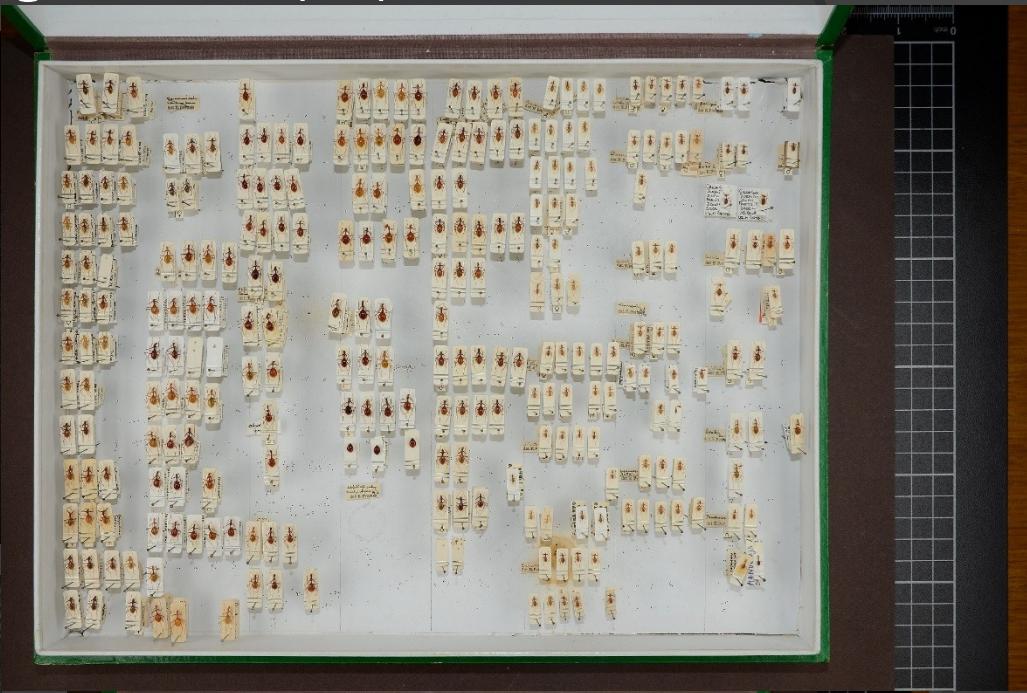

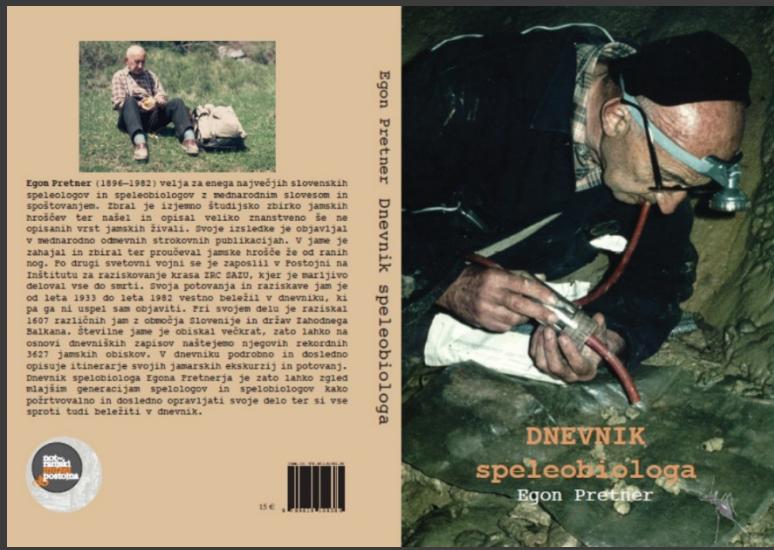

Fig. 1. -- Le continent méditerranéen pendant les périodes géocratiques du Nummulitique. — Le Sillon Transégeen isole l'Égée méridionale de la septentrionale, elle-même unie au Caucase, au Banat et au Bihar, aux Dinarides, à la Tyrhénis et aux Pyrénées.

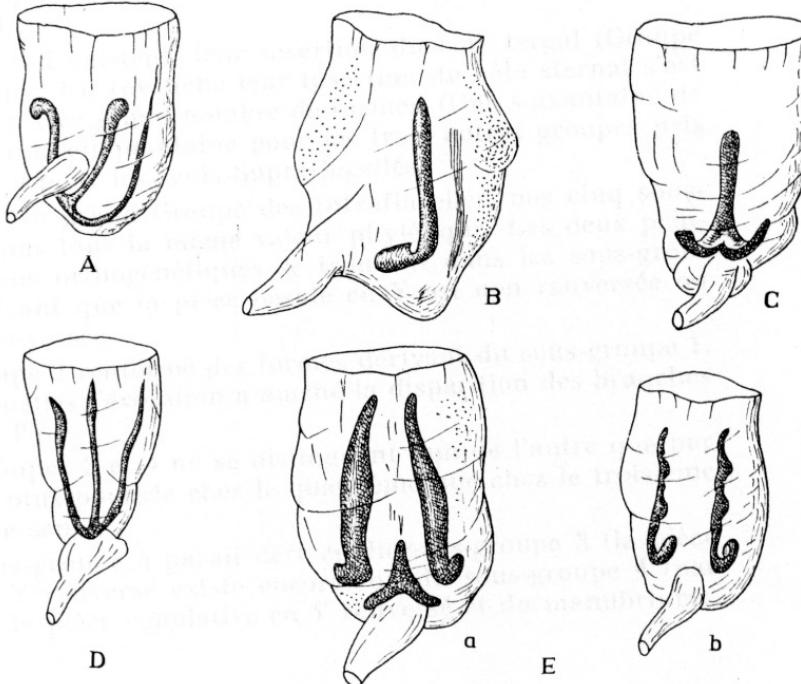

FIG. IV. — Cul-de-sac basal du sac interne de l'édeage des Infragellés (Groupe IV).

- A. Sous-groupe 1. Pièce en Y complète ; les branches de l'Y se soudent sous le canal éjaculateur. Ici : *Speonomus nitens*.
- B. Sous-groupe 2. Evolution du sous groupe 1. Les branches de l'Y ont disparu ; seul le manubrium subsiste. Ici : *Leonhardella angulicollis*.
- C. Sous-groupe 3. Pièce en Y renversé ; les branches de l'Y se soudent au dessus du canal éjaculateur. Ici : *Apholeuonus nudus*.
- D. Sous-groupe 4. Evolution du sous groupe 3. Amincissement extrême des parties de l'Y renversé. Ici : *Aphaeobius milleri*.
- E. Sous-groupe 5. Autre évolution du sous-groupe 3. Il existe de grosses ou grandes phanères latérales en baguettes :
 - a) soit avec conservation d'une petite pièce en Y renversé. Ici : *Speoplana giganteus*.
 - b) soit avec disparition de la pièce en Y. Ici : *Pisidiella ovoïdea*.
