Music with Taste

August 2nd, 2007

Do you know Soul Coughing -> en.wikipedia.org/wiki/Soul_Coughing - Damn great!

And (!) now I know what my music taste is called: 'Big Beat' en.wikipedia.org/wiki/Big_beat - good to know!

Posted in Nonsense | No Comments »

I made it: 10k palatinate cross country running!

July 13th, 2007

I Made It!
Yesterday was sport day at uni. So I attended cross country running! For the first time I took on the 10km route which I finished in 56:22 min. Yeah! I'm still alive and had lots of fun!

Stöckchen: Tobi ist...

June 24th, 2007

ok, ich mach auch mit, ist lustig:

Tobi ist...
...kein Prinz, eher das Gegenteil
...sehr gemein zu tieren! (mit videobeweis)
...unwichtig!
...auf der Flucht
...eine Lusche beim Putten

How much weight does categories derived by tags have?

October 14th, 2007

As a result of the questions "what category does this tag belong to?" on encyclopedias knowledge we obtain a list of categories. But in what extent does this count in the interestprofile? The Formula beneath trys to calculate some weight.

$$g_{categorie} = \frac{1}{c_{categorie}} \sum_{\forall tags} \sum_{\forall services} c_{tag,\,service} \cdot g_{tag} \cdot g_{service}$$

c stands for count, g for weight. the formula reads as follows: " The weight of a category arises by its invers count of appearance multiplied with the sum of all tags in all services weighted by the count of appearance of one tag in a service, the weight of the tag an the weight of the service".

Weigth of service measures if tags are rarely used in a serive (e.g. delicius vs. flickr).
Weight of tag measures how important ist a tag, but this needs to be improved, it is not exactly clear how to detect important tags. Maybe you got any ideas?

Posted in identity matters | No Comments »

What nature can tags be of?

October 12th, 2007

The approach to use only tags for interest determination brings some new questions.

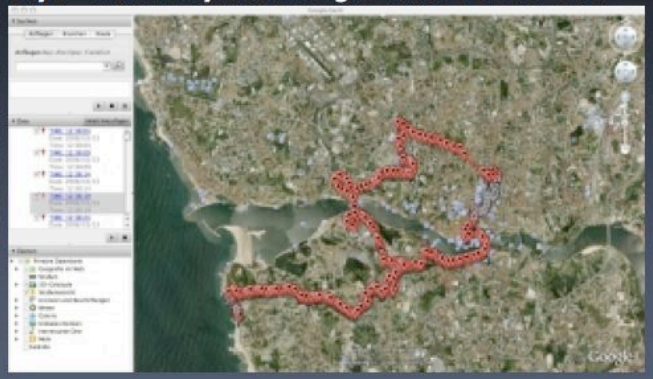
Day9 - Part II: Fly like an eagle - 08:42 14.10.2008



I check frequently the blog stats to see what you -the audience- are interested in. I guess I have to work on the download section. Hereby I promise to find an arrangment either with Fabien and INESC or Nico and the DFKI how to manage to get some space on a machine with fast connection. The first thing to upload will be the .kmz files that enable you to interact with the trip data using Google Earth. You should once try the playback button to fly over the trail!

In the meantime I offer just an insight: Yesterday I recorded a trip relying on different local transportation systems. The noise level, feeling comfy or not, the originality of the chosen vehicle may be covered in this 3GB of data.

PS: Fly like an eagle by the Steve Miller Band was covered by Seal back in the times including an awesome Hammond lick! Sorry, I am still a musician ...

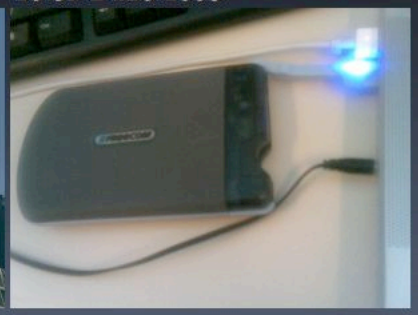
Day19: Wrap-up, Backup, Crunch - 10:37 24.10.2008



Day 19 of my mission. 19 sessions have been recorded. 45 hours of urban sound, sounds in the GHz range, GPS trails any physiological data. 180 hours of data.

Today I am working at INESC to wrap up with Fabien about the things achieved so far and about ideas for next steps. Summer Schools, SMC2009, missions in other cities, improvements of the hardware, software, methodological approach, potential collaborations with academic institutions as well as commercial players, etc. We have already a lot of very concrete points on the list. Good. Very good.

In addition to the wrap-up I am giving a backup of 41.5 GB of data to INESC. They intend to work on it for different purposes. Audio analysis, MIR, sonic interaction design, etc. Fabien takes care of providing the data to the other academic partners at Porto, e.g. UCP- Escola das Artes or Faculdade de Belas Artes on demand. In a couple of minutes I will meet Rui who has already been working on sonifying the biodata.

I am very happy that so many people already start to show interest or work with the data. So much for the dissemination and potential exploitation.

To find more answers to the scientific questions a couple of weeks will be needed in November -back home at DFKI- to crunch the data for the correlations between the different data streams. Since my colleagues at DFKI already did recently data mining of huge data sets with Rapidminer. I am optimistic to get ahead with this issue very soon. Unsupervised clustering of the audio stream will be another issue Christian at the DFKI site in Saarbrücken has promised to work on. And I am looking forward to discuss a little bit with Randy Goebel of University of Alberta about my mission.

PS: Tomorrow is the first day I will take a day-off. No Urban Sync. Just relaxing without digital ego-surveillance. I need it!

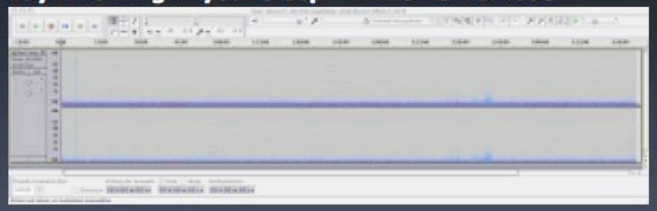
Day7: Talking in your sleep - 12:25 13.10.2008



I told you already. This mission is sometimes exhausting. Technology is still not mature enough to give me a release. Anyway I did a recording of my sleep: 03.30 - 07.00. You can see a clear peak at the beginning which is just putting the device on the bedside cabinet. The little burst at 02.40 is much more interesting. Next time I will extract and upload the audio of this moment for you...

Please remind: Clicking on the images offers access to the full image resolution!

PS: I was a little bit afraid of recording the intimacy .. a nice association came to my mind: The Romantics.
