

3D media

SSMS'08: Summer School on Multimedia Semantics

geometric representations for 3D media
metadata and ontologies for 3D media (AIM@SHAPE)

Intro ▶ 3D media ▶ 3D analysis ▶ 3D retrieval ▶ 3D annotation ▶ conclusions

- ✓ 3D shapes are digital representations of either physically existing objects or virtual objects that can be processed by computer applications

.. created by design ..

5/9/2008 Semantics and 3D Media 2

Intro ▶ 3D media ▶ 3D analysis ▶ 3D retrieval ▶ 3D annotation ▶ conclusions

- ✓ 3D shapes are digital representations of either physically existing objects or virtual objects that can be processed by computer applications

.. created by acquisition ..

5/9/2008 Semantics and 3D Media 3

Intro ▶ 3D media ▶ 3D analysis ▶ 3D retrieval ▶ 3D annotation ▶ conclusions

- ✓ developed for the CAD/CAM industry first, with focus on **solid and rigid objects**
- ✓ wireframe models
- ✓ 1970 – .. **geometric models**, such as boundary representations (B-reps) and CSG
- ✓ Terminology and definitions of the foundations of geometric modelling were introduced in the seminal of Requicha, 1980

Aristides G. Requicha, *Representations for Rigid Solids: Theory, Methods, and Systems*, ACM Computing Surveys, 4(12), 1980

5/9/2008 Semantics and 3D Media 4

Intro ▶ 3D media ▶ 3D analysis ▶ 3D retrieval ▶ 3D annotation ▶ conclusions

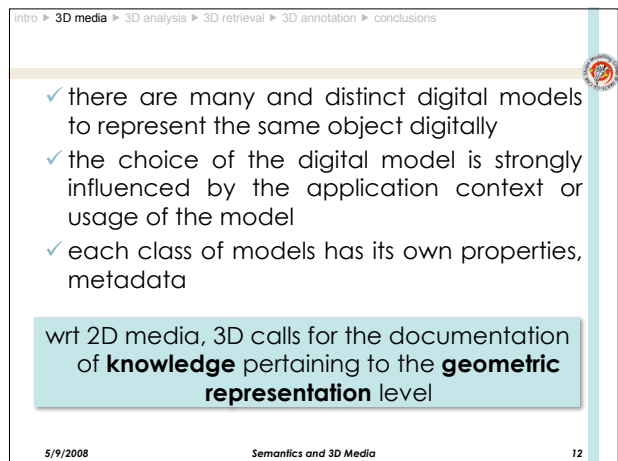

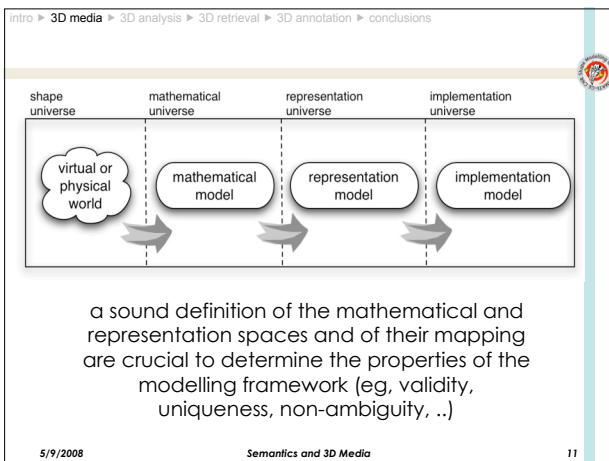

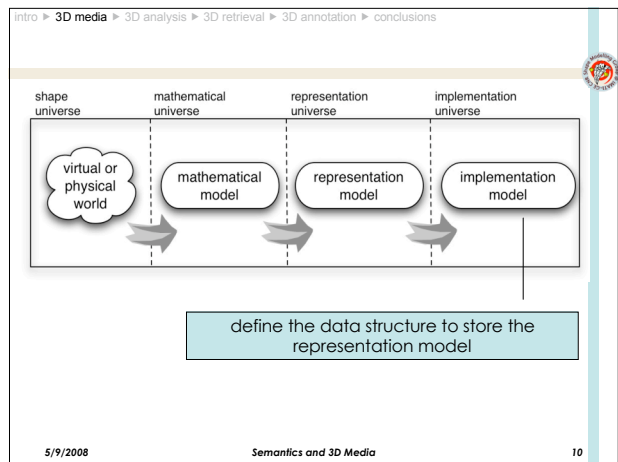

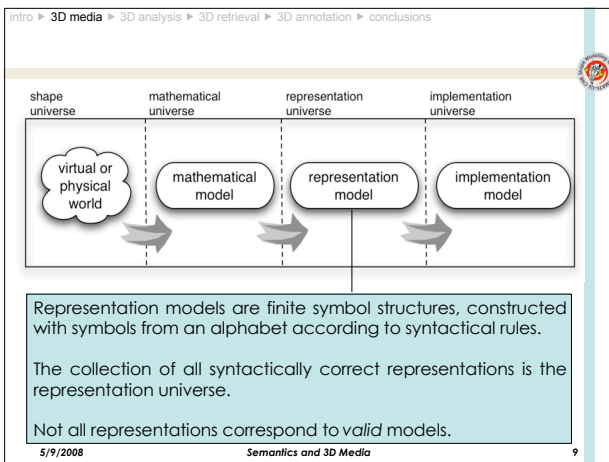

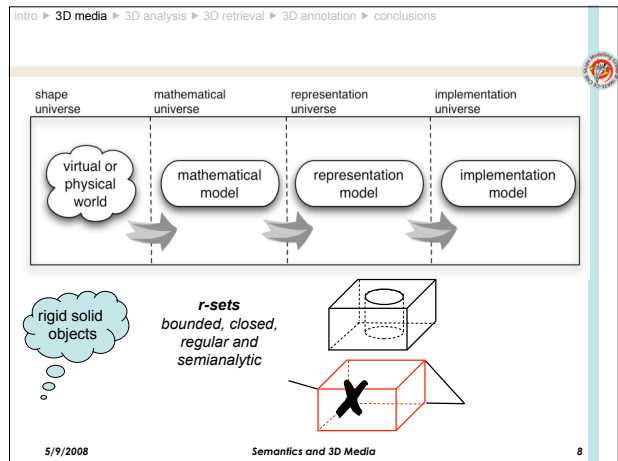

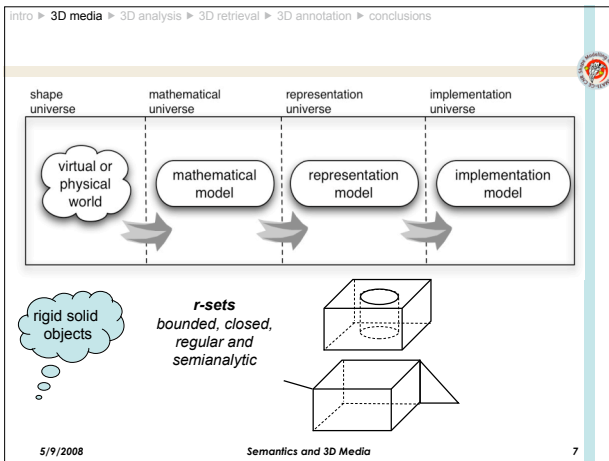

the modelling pipeline is based on the abstraction of the **geometric** nature and properties of 3D objects

5/9/2008 Semantics and 3D Media 5

Intro ▶ 3D media ▶ 3D analysis ▶ 3D retrieval ▶ 3D annotation ▶ conclusions

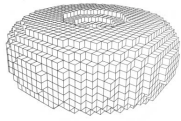

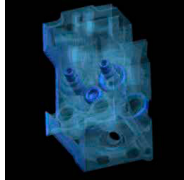

identify the class of subsets of the Euclidean 3D space whose properties corresponds to the properties of the objects to be modelled

5/9/2008 Semantics and 3D Media 6

intro ▶ 3D media ▶ 3D analysis ▶ 3D retrieval ▶ 3D annotation ▶ conclusions

- ✓ Cell decompositions
 - spatial occupancy enumeration (voxels, regular space partitioning,...)
 - object-based (tetrahedra, octrees)
- ✓ Constructive Solid Geometry (CSG)
- ✓ Boundary models
 - triangle meshes
 - B-reps
- ✓ Sweeps
 - generalized cylinders, generic sweeps

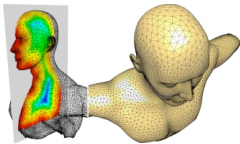

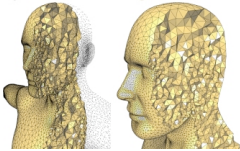

courtesy of Tom Funkhouser

5/9/2008 Semantics and 3D Media 13

intro ▶ 3D media ▶ 3D analysis ▶ 3D retrieval ▶ 3D annotation ▶ conclusions

- ✓ Cell decompositions
 - spatial occupancy enumeration (voxels, regular space partitioning,...)
 - object-based (tetrahedra, octrees)
- ✓ Constructive Solid Geometry (CSG)
- ✓ Boundary models
 - triangle meshes
 - B-reps
- ✓ Sweeps
 - generalized cylinders, generic sweeps

5/9/2008 Semantics and 3D Media 18

intro ▶ 3D media ▶ 3D analysis ▶ 3D retrieval ▶ 3D annotation ▶ conclusions

- ✓ different representation models can be used for representing the same object
- ✓ different file formats can be used for the same representation model
 - triangle meshes: WRL, OFF, PLY, 3Dmax, COLLADA, ..

1987: from solid rigid CAD to ..
deformable (re)-active models !!!

Dimitri Terzopoulos SIGGRAPH Award winning paper

5/9/2008 Semantics and 3D Media 19

intro ▶ 3D media ▶ 3D analysis ▶ 3D retrieval ▶ 3D annotation ▶ conclusions

- ✓ different representation models can be used for representing the same object
- ✓ different file formats can be used for the same representation model
 - triangle meshes: WRL, OFF, PLY, 3Dmax, COLLADA, ..

1990: from CAD models to ..
Marilyn Monroe !!!

Virtual Marilyn : MIRALab, University of Geneva
Nadia Magnenatt-Thalmann

5/9/2008 Semantics and 3D Media 20

intro ▶ 3D media ▶ 3D analysis ▶ 3D retrieval ▶ 3D annotation ▶ conclusions

nowadays, not only rigid solids..

- ✓ dynamic shapes
- ✓ elastic and deformable models
- ✓ animation of natural objects and/or natural phenomena (eg. humans, water, clouds, plants, cloths)
- ✓ from geometric models to physically-based models (already embed some kind of semantics)
- ✓ more elaborate and especially higher-level representation of the shape

5/9/2008 Semantics and 3D Media 21

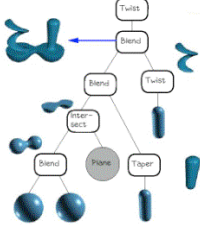

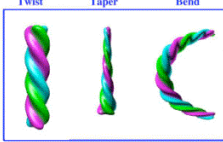

intro ▶ 3D media ▶ 3D analysis ▶ 3D retrieval ▶ 3D annotation ▶ conclusions

nowadays, not only rigid solids..

- ✓ implicit models
 - $F(x,y,z)=0$
- ✓ CSG "new generation"
 - Blob tree

Bill Lorensen
SIGGRAPH 99
Course #4 Notes

courtesy of Brian Wyvill

5/9/2008 Semantics and 3D Media 22

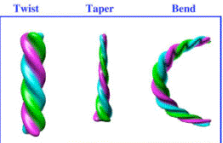

intro ▶ 3D media ▶ 3D analysis ▶ 3D retrieval ▶ 3D annotation ▶ conclusions

intro ▶ 3D media ▶ 3D analysis ▶ 3D retrieval ▶ 3D annotation ▶ conclusions

nowadays, not only rigid solids..

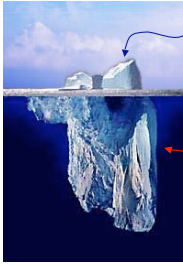

- ✓ Skeleton-based implicit surfaces

courtesy of Marie-Paule Cani

5/9/2008 Semantics and 3D Media 24

intro ▶ 3D media ▶ 3D analysis ▶ 3D retrieval ▶ 3D annotation ▶ conclusions

- ✓ "polygon soups" are very common in non-professional environments
- ✓ NURBS, B-reps, implicits, parametric, "high-quality" triangle meshes are used in professional domains for scientific and entertainment applications

5/9/2008 Semantics and 3D Media 25

intro ▶ 3D media ▶ 3D analysis ▶ 3D retrieval ▶ 3D annotation ▶ conclusions

first efforts toward semantics 3D

- ✓ sophisticated representations of the shape of 3D objects: what is missing to make them more easy to model, more *intelligent* in interactive virtual environments, more "self-descriptive" about what is their content & meaning ?

2004 : AIM@SHAPE
(actually, started much earlier ...)

- ✓ semantics and/or knowledge maybe related to various aspects of 3D media
 - the object itself (real or virtual)
 - the digital representation of the object
 - the use or purpose of the object in a given application context

5/9/2008 Semantics and 3D Media 26

intro ▶ 3D media ▶ 3D analysis ▶ 3D retrieval ▶ 3D annotation ▶ conclusions

www.aimatshape.net

- ✓ knowledge technologies & shape modelling
 - AIM@SHAPE project: the 1st big effort towards the coupling shape modelling with knowledge technologies
 - 4 years (2004-2008), ≥ 6Mio €, 13 partners, coordinated by Bianca
 - tangible results: the Digital Shape Workbench with its Shape Repository
 - models with certified properties
 - documentation of models and tools via ontologies
 - promotion of benchmarking

5/9/2008 Semantics and 3D Media 27

intro ▶ 3D media ▶ 3D analysis ▶ 3D retrieval ▶ 3D annotation ▶ conclusions

- ✓ key issue: knowledge technologies as the way to promote and adopt
 - (better) documentation of existing algorithms and methods
 - culture of replicability of results
 - benchmarking
- ✓ benefits for the SM community
 - avoid re-inventing the wheel, better focus on really open research issues instead of incremental work
 - more scientific approach

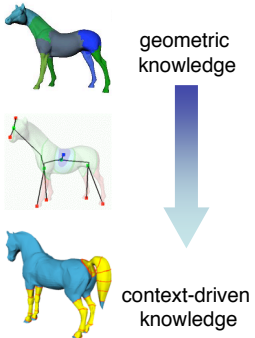

5/9/2008 Semantics and 3D Media 28

intro ▶ 3D and semantics ▶ 3D analysis ▶ 3D retrieval ▶ 3D annotation ▶ conclusions

the AIM@SHAPE view

- ✓ Geometry
 - properties of the representation model
 - properties of the surface/volume that defines the model
- ✓ Structure
 - simpler parts of the model and their configuration and/or composition
- ✓ Context
 - Interpret the geometry and/or structure in a context to annotate high-level features (semantics)

5/9/2008 Semantics and 3D Media 29

intro ▶ 3D media ▶ 3D analysis ▶ 3D retrieval ▶ 3D annotation ▶ conclusions

the AIM@SHAPE experience

- ✓ not easy to convince the CG community about the usefulness of knowledge technologies such as metadata/ontologies
- ✓ research activities focused on method to segment, analyse and interpret shapes
- ✓ concentrate on learning how to use and develop ontologies to supports researchers in computer graphics in their activities
 - sharing shape models
 - high-quality models with certified properties
 - benchmarking
 - services for processing shapes

... if we are lucky, "demo" ...

5/9/2008 Semantics and 3D Media 30

the AIM@SHAPE success !!

- ✓ the keyword "semantics" appears more frequently in our shape analysis papers, more concern about the *meaning of the segmentation task*
- ✓ great success of the shape repository, related ontologies and *smart* services for model search, retrieval and "selective" downloading

questions ?
