

VRSTA

Boris Kryštufek

Univerza na Primorskem
Prirodoslovni muzej Slovenije

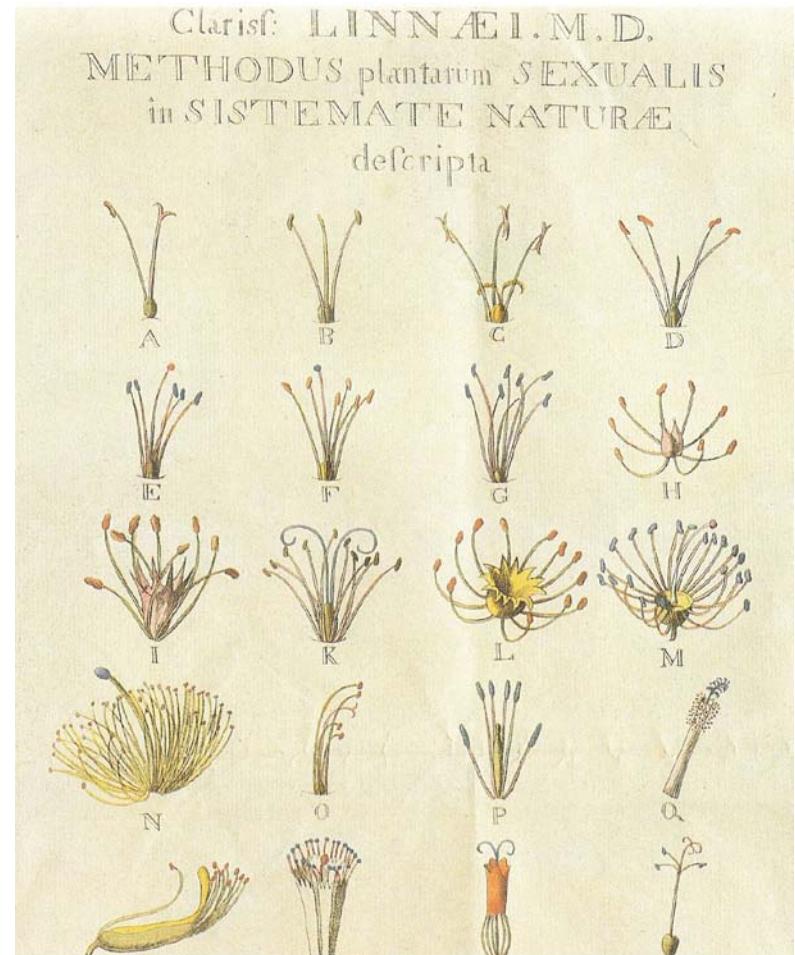

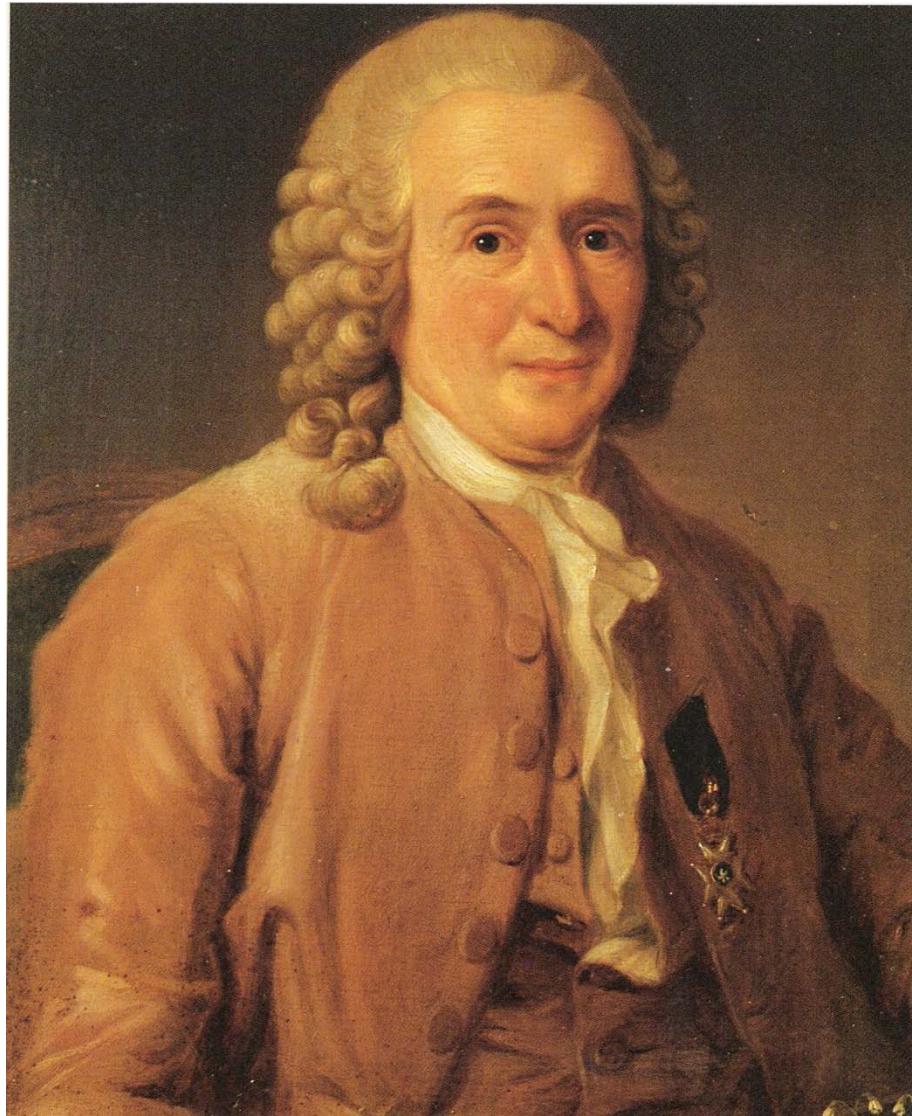

Vrsta je v biologiji ena temeljnih enot, po pomenu primeljiva s konceptom gena, celice, ekološke niše itd.

“species mean many things to
many people”

Konceptualno

Species are separately
evolving (segments of)
metapopulation
lineages

Genetski koncept vrste

“Genetska vrsta” je skupina genetsko kompatibilnih naravnih populacij, ki so genetsko izolirane od drugih podobnih skupin.

Baker, R.J., Bradley, R.D. 2006. Speciation in mammals and the genetic species concept. J. Mammalogy 87: 643-662.

Do genetske izolacije pride, ko se dva genoma razideta do točke, v kateri sta genetsko različna in nič več ne delita skupne evolucijske usode.

Genetska variabilnost

	Znotraj vrst	Med vrstami
<i>Spermophilus</i>	0.0 – 4.0	1.3 – 11.3
<i>Microtus</i>	0.2 – 4.4	4.3 – 11.1
