Walter Benjamin

Walter Benjamin in Paris 1937, photographer unknown

- From archive: dhm berlin

"The Translator's Task" (1923) ("Die Aufgabe des Übersetzers")

Benjamin posits that translation is **not** about achieving a stylistic or expressive fidelity to the original text . . .

"[a] real translation is transparent."

It renders the original in a "**pure language**,"

- See Walter Benjamin, "The Task of the Translator" (introduction to a Baudelaire translation, 1923; *text translated by Harry Zohn, 1968*)

“a real translation is transparent”
like looking at the text through a window

Book Art created by Frances Kiernan

- See <http://www.franceskiernan.co.uk/page10.htm>

“transparent rendering” is mostly how we think about translation as a legal matter

Original author
owns the work

Translation is merely
a re-rendering, the
more faithful and
accurate the better

- Translations are governed by Copyright Law
- Treated as “derivative” or “adaptation” of original
- Original Author has exclusive rights to authorize translations

FAHQT: Fully Automated High Quality Machine Translation

GAZETTE PHONE 4-4141

SCHENECTADY GAZETTE, FRIDAY, JANUARY 8, 1954

Newest Electronic Brain Even Translates Russian

NEW YORK, Jan. 7 (AP)—The International Business Machines Corp. put its ingenious electronic brain to work on language today and came up with a new kind of translator.

Give the brain a sentence—any old sentence—such as this one in Russian:

* * *

"MYEZHDUNARODNOYE panyimaniye yavlyayetsya vazhnim faktorom v Ryeshyeniye polityicheskix voprosov."

It'll be tossed back at you in English in 10 seconds.

The arrangement is mostly the doing of Dr. Leon Dostert, chairman of Georgetown University's Institute of languages and linguistics.

tics, and Dr. Cuthbert C. Hurd, director of IBM's applied science division.

What Dostert, Hurd and their aides have done is produce an electronic "pony"—that little book you used back in high school to help you pass your Latin course. This one's a bit larger, though.

It consists of 12 machines weighing tons each and was introduced last year by IBM as its Type 701 electronic data processor. Type 701 is the rig that takes seconds to do an equation that would take you a lifetime.

* * *

JOINING IN 701'S public unveiling as a translator at IBM headquarters today was Thomas J. Watson, IBM board chairman.

"I see in this an instrument that will be helpful in working out the problems (of world peace)," he declared. "We must do everything possible to get the people of the world to understand each other—as quickly as possible."

Dostert, who was in charge of installing the original simultaneous translation system at the United Nations, echoed the thought.

SKI TRAILS

By

LLOYD LAMBERT

The snow that took over in this area this past weekend ranged from two to four inches; it even had the audacity to fall in places where there were no ski tows. However, Speculator received about six inches, putting the Oak Mountain Ski Center in business. Alpine Meadows had only a two-inch coverage; Pico Peak received about the same, and was unable to turn a wheel on either the lift or the tow.

* * *

EARLY SUNDAY MORNING, I took off for Mad River Glen at Whitefield, Vt. Rain started to fall by the time I arrived at Glens Falls, and as I neared Rutland I must have passed through the cold front, because the rain began to freeze on the road and the windshield, making driving a bit hazardous. On the way up the mountain to Pico, the low-hanging clouds brought the visibility down near zero, but as I started up route 100 the weather cleared, and I even had a peek at the rising

mid-station down to the base. Both trails were rather worn, but it was possible to enjoy yourself by picking your way down.

During the past summer, the Catamount had been groomed by grading and blasting; otherwise, it would have been impossible to ski it with so little snow. There was as much as twenty inches of snow earlier in the season, but rain had washed some of it away. The snow that fell while I was there improved conditions considerably; that bare grass I saw in the morning had been completely covered before I left. There was no waiting at the

Flexible Price

By OVID A. MARTIN
WASHINGTON, Jan. 7 (AP)—President Eisenhower told congress today future farm programs should use flexible price supports—rather than present mandatory, high-level floors—to stimulate consumption of crops now piling up in government hands.

But, he said, a shift to the flexible system—now set to go into effect next year unless congress directs otherwise—should avoid any abrupt slump in government price guarantees.

* * *

THE PRESIDENT, in his message on the State of the Union, said full details of the administration's new farm program will be laid before lawmakers in a special message next Monday.

But he outlined enough of the program today to indicate that it may be headed for rough sledding on Capitol Hill. Farm leaders in and out of congress are sharply divided over the issue of price supports. Some, including most members of the house agriculture committee, favor present high-level props.

Others, including Chairman Aiken (R, Vt.) of the senate agriculture committee and Sen. Anderson (D, NM), former secretary of agriculture, favor flexible supports. Both

Warren Weaver to Rockefeller Foundation

July 15, 1949

The attached memorandum on translation from one language to another, and on the possibility of contributing to this process by the use of modern computing devices of very high speed, capacity, and logical flexibility, has been written with one hope only - that it might possibly serve in some small way as a stimulus to someone else, who would have the techniques, the knowledge, and the imagination to do something about it.

I have worried a good deal about the probable naivete of the ideas here presented; but the subject seems to me so important that I am willing to expose my ignorance, hoping that it will be slightly shielded by my intentions.

Warren Weaver
The Rockefeller Foundation

New York 20, New York

The attached memorandum on translation ... by the use of modern computing devices of very high speed, capacity, and logical flexibility, has been **written with one hope only** - that it might possibly serve in some small way as a **stimulus to someone else, who would have the techniques, the knowledge, and the imagination to do something about it.**

“In **1954** IBM and Georgetown University demonstrated the translation of more than 60 sentences from Russian into English. The IBM press release, dated January 8, 1954, glowed: “Russian was translated into English by an electronic ‘brain’ today for the first time.” **The military defense community and computer scientists expected routine machine translation within five years**, but it never materialized.”

From: “The Elusive Goal of Machine Translation” by Gary Stix

- *Scientific American* (March 2006)

“Transparent” is the goal Reality is translucent

FAHQT - Fully-Automated, High Quality Translation

NHQ - Near Human Quality

MATPUT - Maximum Assistance in Text Processing, Understanding and Translating

MAHT -- Machine-Aided Human Translation

HAMT -- Human-Aided Machine Translation

What inspired Weaver?

WARREN WEAVER: "A most serious problem, for UNESCO and **for the constructive and peaceful future of the planet**, is the problem of translation, as it unavoidably affects the communication between peoples."

NORBERT WIENER: "**mechanization of language...seems very premature.**

By the way, I have been fascinated by ... the wiring diagram of [this] apparatus [that] turns out to be surprisingly like the microscopic analogy of the visual cortex in the brain."

Norbert Wiener Father of Cybernetics

Globalization driver

“...the intensification of worldwide social relations which link distant localities in such a way that local happenings are shaped by events occurring many miles away and vice versa.”

Anthony Giddens, Director of the London School of Economics

Over 7,000 languages in the world

- English (800 MM to 1.8 bn)
- Chinese (1.3 bn users)
- Hindi (800 MM users)
- Arabic (530 MM)
- Spanish (350 MM)
- Russian (280 MM)
- Urdu (180 MM)
- French (175 MM)
- Japanese (130 MM)

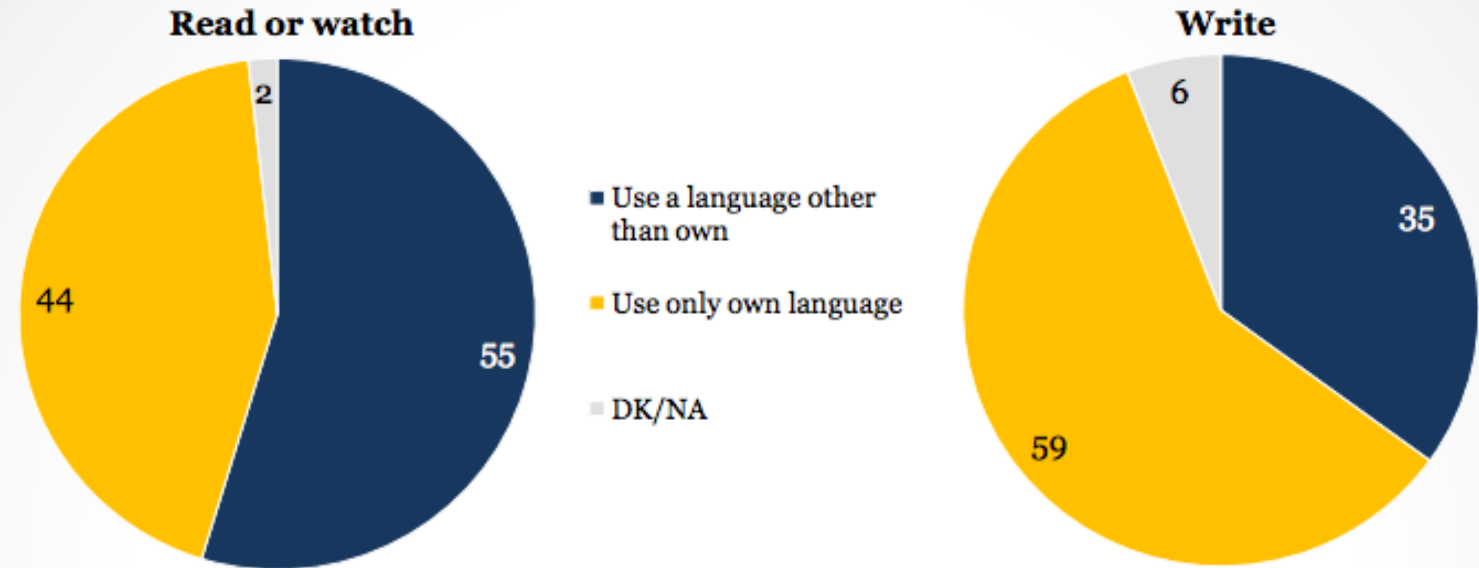

90% of world

According to Census of India of 2001:

- 30 languages spoken by one million+ native speakers
- 122 by more than 10,000
- Over 2000 dialects

Languages, other than respondents' own, that are used on the Internet

9 in 10 Internet users in the EU said that, *when given a choice of languages, they always visited a website in their own language*. Only half would accept using an English version of a website if it was not available in their own language.

From "Flash Eurobarometer: User Language

- Preferences Online, Gallup (May 2011)

Salvador Oliva
Translator of
Shakespeare into
Catalan

“with regard to the issue of the reception levels, I have the following theory: if you translate properly, **the resulting text should include all the possible readings...**”

Translation as a “Mirror”

- From *The Magic Mirror Book*, by Marion Walter, Scholastic, 1971

“A real translation is transparent; it does not cover the original, does not black its light, but allows the pure language, as though **reinforced by its own medium to shine upon the original** all the more fully.”

Prior to circa 1910, a translation was *not* a “copy” under Copyright Law

Judge in 1853 opinion in *Stowe vs. F.W. Thomas* over German translation of *Uncle Tom's Cabin*:

*“a translation **required genius in its construction**...where the genius of the translator is called forth, there he is himself an author and **his translation an original work**”*

(quoted by *The spread of novels: translation and prose fiction in the eighteenth century* By Mary Helen McMurrin (p 179, n 93))

Copyright (i.e., as intangible property right) is a “modern” concept

~450
years

- 1450 – Gutenberg Press invented
- 1501 – Printing presses in 280+ European cities
- 1710 – England enacts “Statute of Anne”
- 1886 – Berne Convention
- 1896 – Berne Revision
- 1908 – Another Berne Revision
- 1909 US & 1911 UK Copyright

~20
years

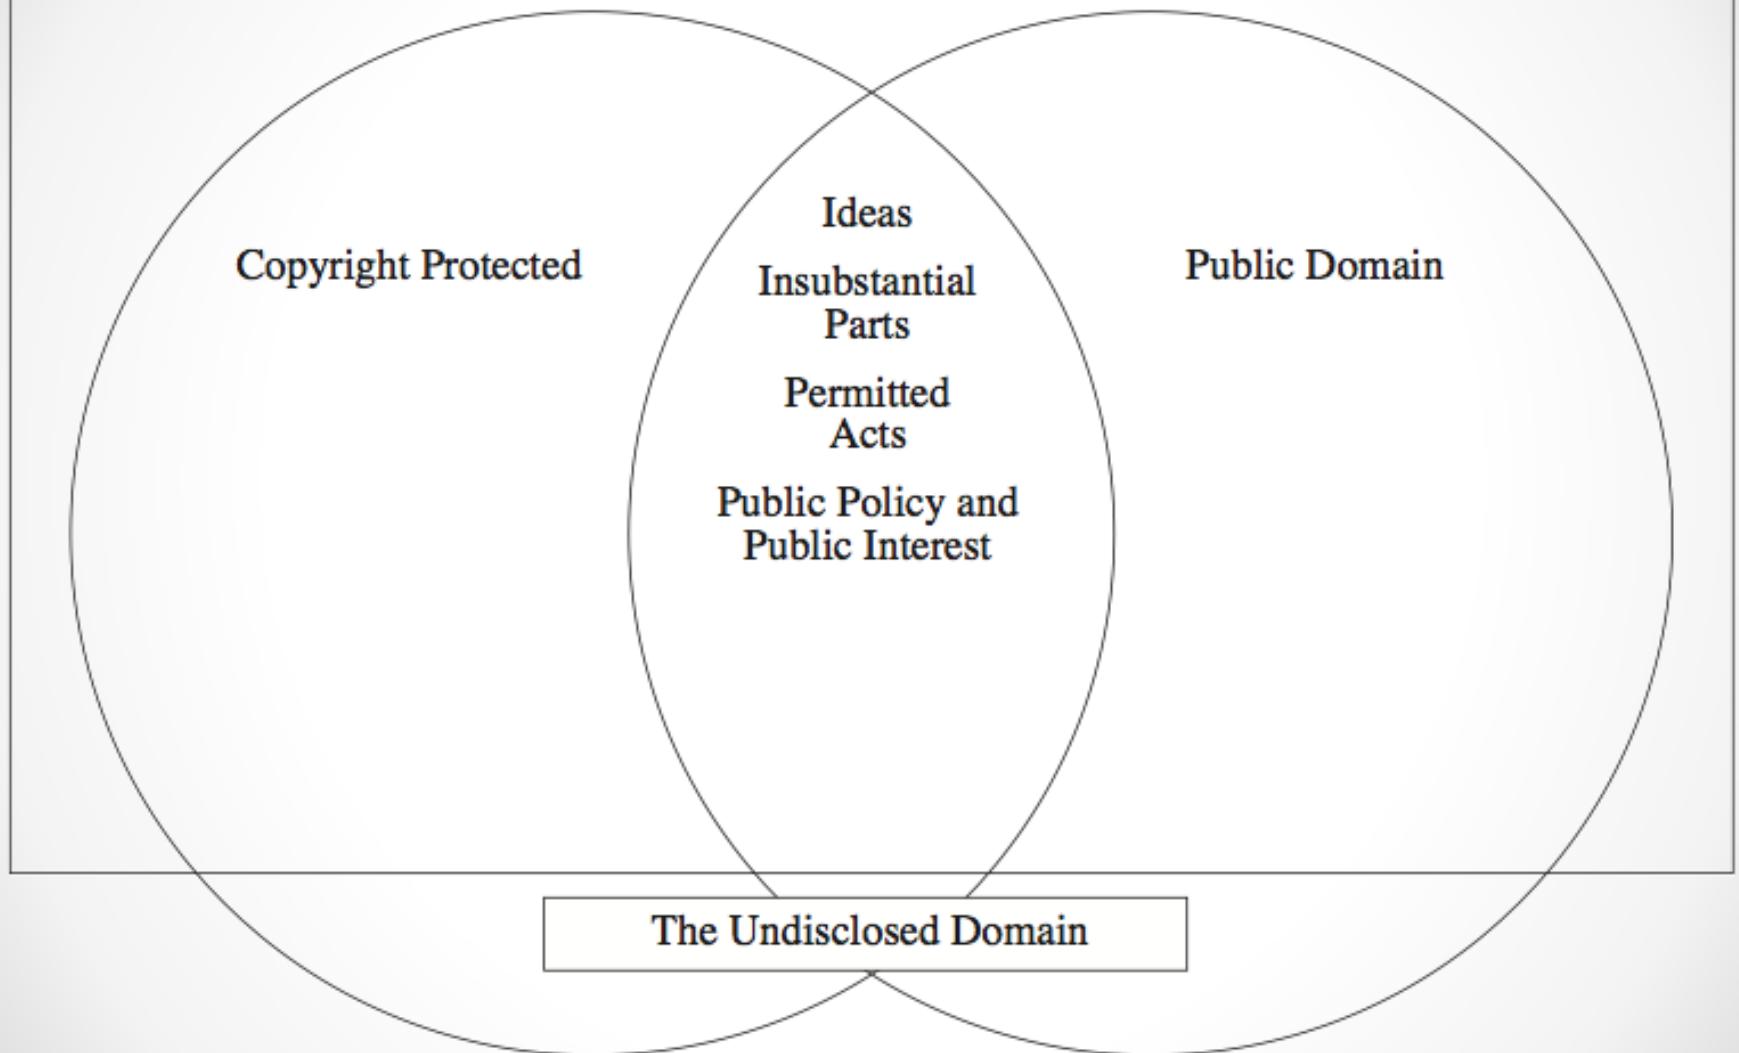

Despite wavering from 1886 to 1908, Berne finally settled on clear rights ... or maybe not

- *Article 2(3):* Translations ... shall be protected as original works without prejudice to the copyright in the original work.
- *Article 8:* Authors ... shall enjoy the exclusive right of making and of authorizing the translation of their works throughout the term of protection of their rights in the original works.

Ambivalence arising out of a balancing of competing policies/concerns

Original Work	↔	Derivative Work
Expression	↔	Ideas/Facts
Author Monopoly	↔	Knowledge Commons
Past Economics	↔	Future Economics
Authenticity	↔	Accuracy
Work of “genius”	↔	Workman-like (for-Hire)
Art	↔	Science
Exporters	↔	Importers

THE INTELLECTUAL COMMONS

Translation (the old fashioned way)

- According to the U.S. Bureau of Labor Statistics, translators and interpreters are one of the fastest growing occupations, through 2018.
- In May 2010, ~44K “translators and interpreters” making average \$24/hour, averaging annual salary of ~US\$50,000
- It all adds up: Global market for translation estimated at **US\$3 billion** (supporting nearly 60k people and 45k businesses) (IBISWorld)

Top 5 Translation Service Providers

Rank	Company	HQ Country	Revenue in US\$M	Employ	Offices
1	Lionbridge Technologies	US	US\$ 405.0	4000	50
2	L-3	US	US\$ 372.3	n/a	n/a
3	SDL International	UK	US\$ 142.9	1500	50
4	TransPerfect/ Translations	US	US\$ 74.0	385	30

Translation as a “dagger”

Translation as a scalpel

“**A real translation is transparent;** it does not cover the original, does not black its light, but allows **the pure language**, as though reinforced by its own medium to shine upon the original all the more fully. This may be achieved, above all, by a literal rendering of the syntax which proves **words rather than sentences to be the primary element of the translator.**”

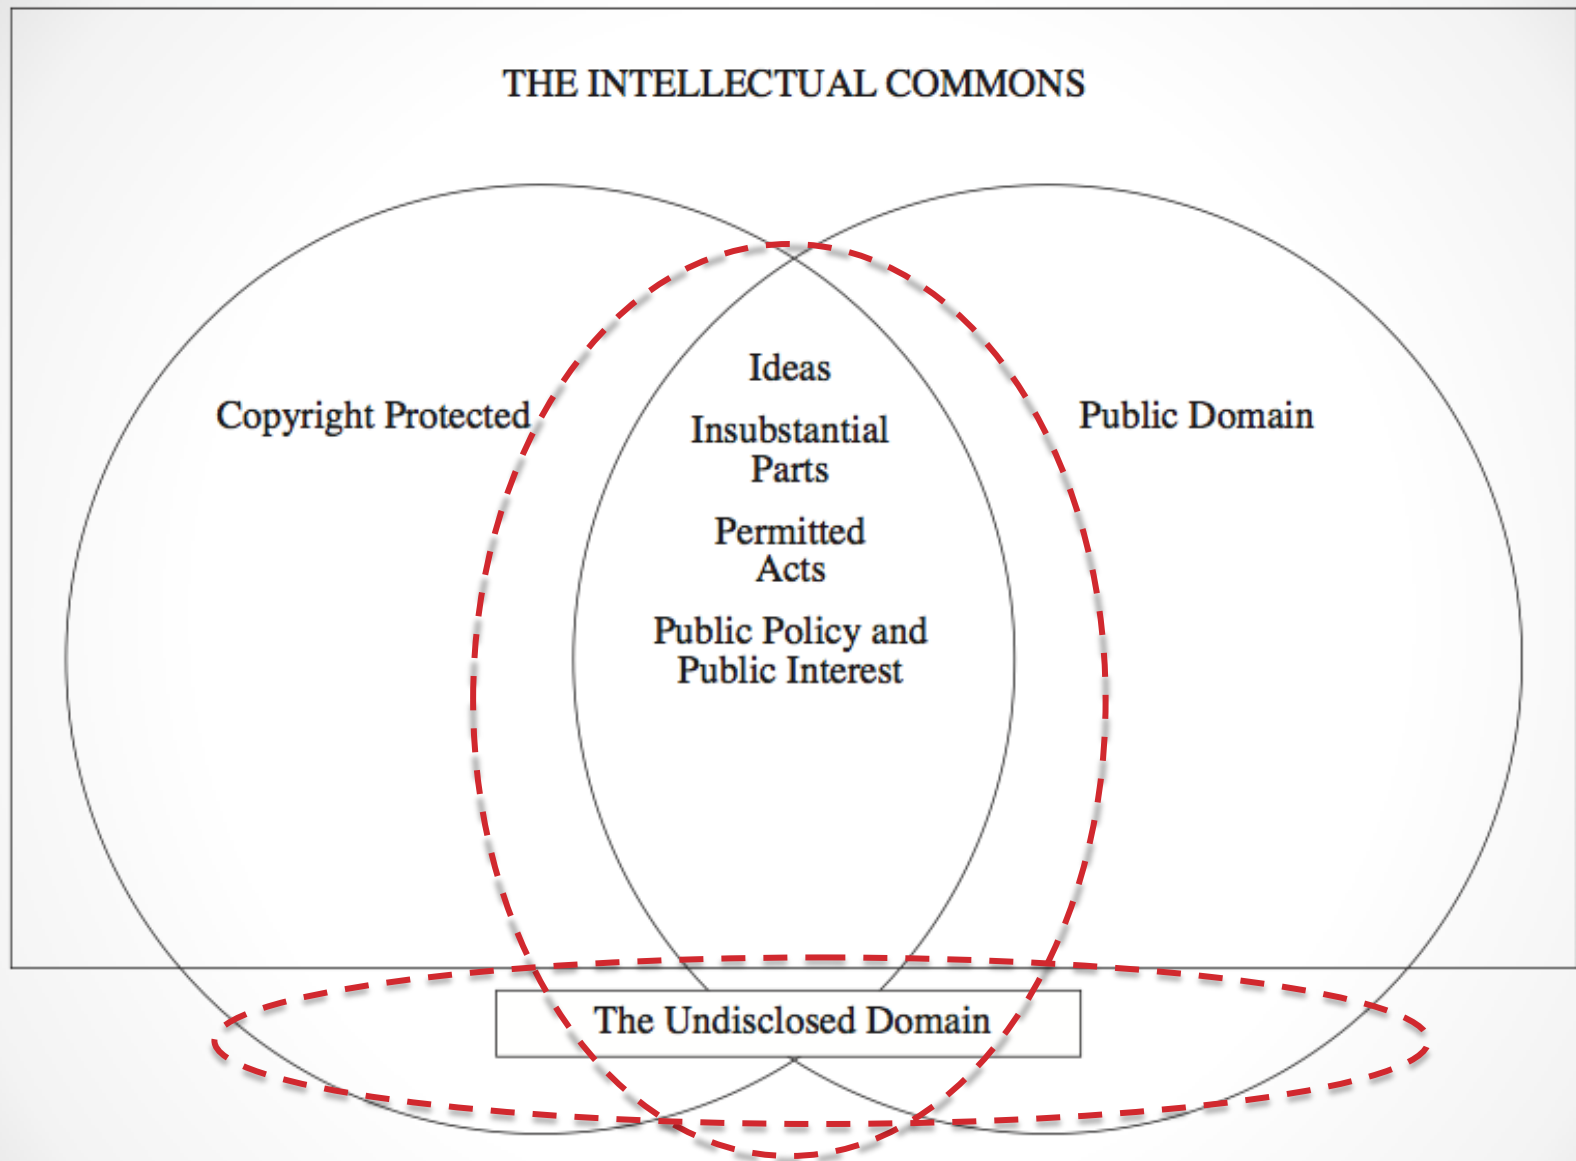

“words rather than sentences”

- © Su Blackwell See <http://www.sublackwell.co.uk/portfolio-book-cut-sculpture/>

“Scalpel”ing the essential ideas out of the realm of language

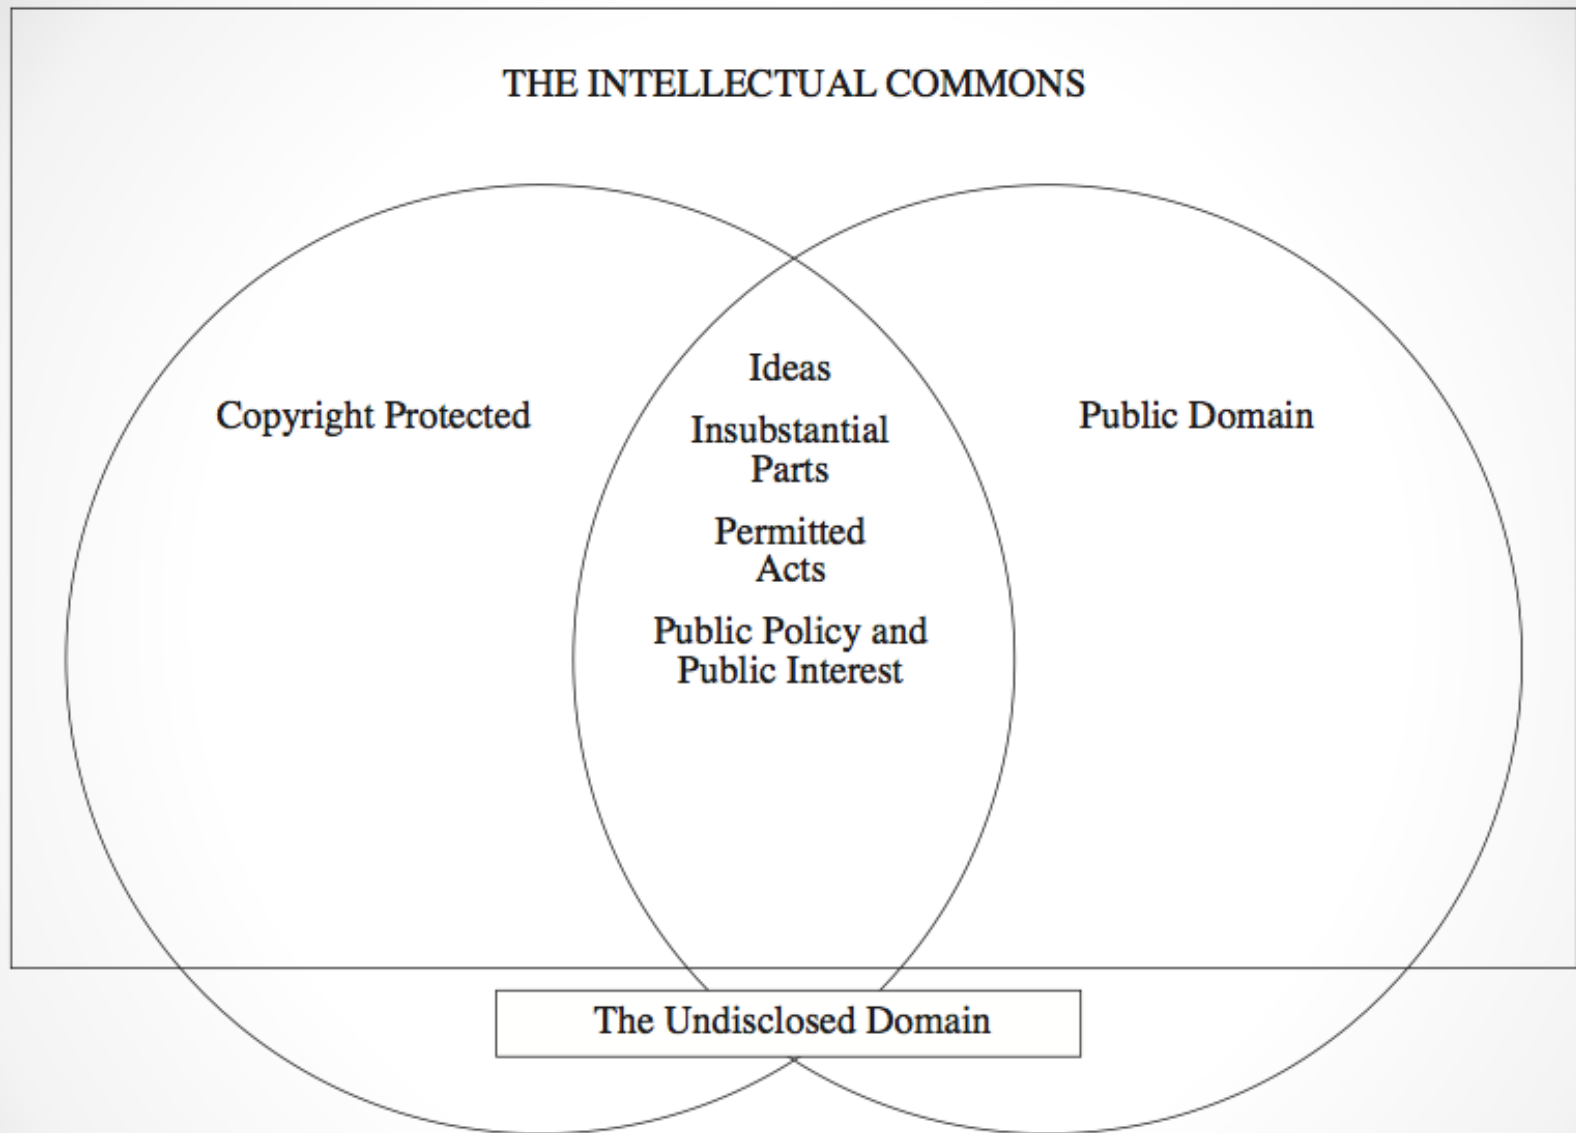

Value of “open” knowledge

Study by Computer & Communication Industry Association based on 2007 data

- Fair use access generated est. **\$4.4 trillion in revenue**
- Accounts for about one sixth of U.S. gross domestic product (GDP)
- Employing more than 17 million workers

Person who operates the machine

Person who builds the machine

The machine

“Computer-Generated Works”

“In the case of a literary, dramatic, musical or artistic work *which is computer-generated*, the author shall be taken to be *the person by whom the arrangements necessary for the creation of the work are undertaken.*”

U.K. Copyright, Designs and Patents Act, 1988, ch.48, §§ 9(3)

U.S. Copyright Office's "Compendium"

"In order to be entitled to copyright registration, a **work must be the product of human authorship**. Works produced by mechanical processes or random selection without any contribution by a human author are not registrable."

No one owns what the machine creates

Anticipates (and reflects) our ambivalence over a cybernetic future

“I have **worried a good deal about the probable naivete of the ideas** here presented; but the subject seems to me so important that **I am willing to expose my ignorance, hoping that it will be slightly shielded by my intentions.**”

The attached memorandum on translation from one language to another, and on the possibility of contributing to this process, by the use of modern computing devices of very high speed, capacity, and logical flexibility, has been written with one hope only - that it might possibly serve in some small way as a stimulus to someone else, who would have the techniques, the knowledge, and the imagination to do something about it.

I have worried a good deal about the probable naivete of the ideas here presented; but the subject seems to me so important that I am willing to expose my ignorance, hoping that it will be slightly shielded by my intentions.

Warren Weaver
The Rockefeller Foundation
49 West 49th Street
New York 20, New York

“Where a text is identical with truth or dogma, where it is supposed to be “the true language”... this text is unconditionally translatable. In such case translations are called for **only because of the plurality of languages**. Just as, in the original, **language and revelation are one without any tension...**”
