**Claire Cardie, Robert Kleinberg**

*Cornell University*

July 10, 2013

# Outline

- 1 Polarization: a Social Science Concept
- 2 Previous Work: Modularity and its drawbacks
- 3 Measure 1: Community Boundaries
- 4 Case Study: Gun Control debate on Twitter
- 5 Measure 2: Concentration of Popular Nodes in the Boundary
- 6 Conclusions and Ongoing work

# Polarization: a Social Science Concept

Polarization: a Social Science Concept

Previous Work: Modularity and its drawbacks

Measure 1: Community Boundaries

Case Study: Gun Control debate on Twitter

Measure 2: Concentration of Popular Nodes in the Boundary

Conclusions and Ongoing work

Social process whereby a social group is divided into two opposing sub-groups having **conflicting** positions and viewpoints

Figure: 2004 U.S. Political Blogosphere [Adamic et al. 2005]

Figure: 2010 U.S. Political Twitter Network [Conover et al. 2010]

# Polarization: a Social Science Concept

Polarization: a Social Science Concept

Previous Work: Modularity and its drawbacks

Measure 1: Community Boundaries

Case Study: Gun Control debate on Twitter

Measure 2: Concentration of Popular Nodes in the Boundary

Conclusions and Ongoing work

- Politics – parties
- Public Policies – same-sex marriage, abortion, gun control
- Sports – supporters of rival clubs

Key aspects:

- **antagonism**
- **extreme, biased opinions**

# Why study polarization in social media?

- 1. Polarization causes **segregation** and **conflict** in the society [Paul DiMaggio 1996; Mouw and Sobel 2001].
- 2. Polarization can be a key information for **opinion analysis** [Calais et al 2011, Tan et al 2011]
- 3. Polarization → strong **bias** on opinions [Walton 1991]

Polarization: a Social Science Concept

Previous Work: Modularity and its drawbacks

Measure 1: Community Boundaries

Case Study: Gun Control debate on Twitter

Measure 2: Concentration of Popular Nodes in the Boundary

Conclusions and Ongoing work

# Outline

Polarization: a Social Science Concept

Previous Work: Modularity and its drawbacks

Measure 1: Community Boundaries

Case Study: Gun Control debate on Twitter

Measure 2: Concentration of Popular Nodes in the Boundary

Conclusions and Ongoing work

- 1 Polarization: a Social Science Concept
- 2 Previous Work: Modularity and its drawbacks
- 3 Measure 1: Community Boundaries
- 4 Case Study: Gun Control debate on Twitter
- 5 Measure 2: Concentration of Popular Nodes in the Boundary
- 6 Conclusions and Ongoing work

# How is polarization measured on OSNs?

Polarization → Cohesive and dense subgroups [Conover et al. 2011, Adamic et. al. 2005, Scott et. al, 2009, Zhang et. al 2010]

- clusters having many internal connections among nodes
- few connections to the other group

Polarization: a Social Science Concept

Previous Work: Modularity and its drawbacks

Measure 1: Community Boundaries

Case Study: Gun Control debate on Twitter

Measure 2: Concentration of Popular Nodes in the Boundary

Conclusions and Ongoing work

# How is polarization measured on OSNs?

Polarization: a Social Science Concept

Previous Work: Modularity and its drawbacks

Measure 1: Community Boundaries

Case Study: Gun Control debate on Twitter

Measure 2: Concentration of Popular Nodes in the Boundary

Conclusions and Ongoing work

- **Modularity** [Newman 2006]

- Measures the **strength** of division of a network into modules
- Compares the number of edges inside a cluster with the expected on a **random graph**

$$Q = \frac{1}{2m} \sum_{ij} \left[ A_{ij} - \frac{k_i k_j}{2m} \right] \frac{s_i s_j + 1}{2} \quad (1)$$

- range:  $[-1/2, 1)$

# How is polarization measured?

- high modularity  $\rightarrow$  polarization [Conover et al. 2011, Adamic et. al. 2005, Scott et. al, 2009, Zhang et. al 2010]

Polarization: a Social Science Concept

Previous Work: Modularity and its drawbacks

Measure 1: Community Boundaries

Case Study: Gun Control debate on Twitter

Measure 2: Concentration of Popular Nodes in the Boundary

Conclusions and Ongoing work

# Modularity seems to make sense...

Figure: 2004 U.S. Political Blogosphere [Adamic et al. 2005]

$$Q = 0.42 \text{ (high!)}$$

Polarization: a  
Social Science  
Concept

Previous  
Work:  
Modularity  
and its  
drawbacks

Measure 1:  
Community  
Boundaries

Case Study:  
Gun Control  
debate on  
Twitter

Measure 2:  
Concentration  
of Popular  
Nodes in the  
Boundary

Conclusions  
and Ongoing  
work

# ... but what about non-polarized social networks?

Polarization: a Social Science Concept

Previous Work: Modularity and its drawbacks

Measure 1: Community Boundaries

Case Study: Gun Control debate on Twitter

Measure 2: Concentration of Popular Nodes in the Boundary

Conclusions and Ongoing work

**Figure:** Facebook Friends (grad and undergrad communities). No polarization at all!

$$Q = 0.24$$

# Modularity and Polarization

Polarization: a Social Science Concept

Previous Work: Modularity and its drawbacks

Measure 1: Community Boundaries

Case Study: Gun Control debate on Twitter

Measure 2: Concentration of Popular Nodes in the Boundary

Conclusions and Ongoing work

Figure:  $Q=0.24$  and  $Q=0.42$

- How much is “high” modularity?

# Modularity and Polarization

Polarization: a Social Science Concept

Previous Work: Modularity and its drawbacks

Measure 1: Community Boundaries

Case Study: Gun Control debate on Twitter

Measure 2: Concentration of Popular Nodes in the Boundary

Conclusions and Ongoing work

Figure:  $Q=0.24$  and  $Q=0.42$

- How much is “high” modularity?
- Modularity is not a *direct* measure of Polarization.

# Modularity and Polarization

Polarization: a Social Science Concept

Previous Work: Modularity and its drawbacks

Measure 1: Community Boundaries

Case Study: Gun Control debate on Twitter

Measure 2: Concentration of Popular Nodes in the Boundary

Conclusions and Ongoing work

Figure:  $Q=0.24$  and  $Q=0.42$

- How much is “high” modularity?
- Modularity is not a *direct* measure of Polarization.
- We want a **negative** measurement when no polarization is present.

# Modularity and Polarization

Polarization: a Social Science Concept

Previous Work: Modularity and its drawbacks

Measure 1: Community Boundaries

Case Study: Gun Control debate on Twitter

Measure 2: Concentration of Popular Nodes in the Boundary

Conclusions and Ongoing work

Figure:  $Q=0.24$  and  $Q=0.42$

- How much is “high” modularity?
- Modularity is not a *direct* measure of Polarization.
- We want a **negative** measurement when no polarization is present.
- We seek a structural pattern that highlights *antagonism*.

# The bias in the literature

## Polarized networks vs. Non-polarized networks

Polarization: a  
Social Science  
Concept

Previous  
Work:  
Modularity  
and its  
drawbacks

Measure 1:  
Community  
Boundaries

Case Study:  
Gun Control  
debate on  
Twitter

Measure 2:  
Concentration  
of Popular  
Nodes in the  
Boundary

Conclusions  
and Ongoing  
work

# The bias in the literature

## Polarized networks vs. Non-polarized networks

Polarization: a Social Science Concept

Previous Work: Modularity and its drawbacks

Measure 1: Community Boundaries

Case Study: Gun Control debate on Twitter

Measure 2: Concentration of Popular Nodes in the Boundary

Conclusions and Ongoing work

# Outline

Polarization: a Social Science Concept

Previous Work: Modularity and its drawbacks

Measure 1: Community Boundaries

Case Study: Gun Control debate on Twitter

Measure 2: Concentration of Popular Nodes in the Boundary

Conclusions and Ongoing work

- 1 Polarization: a Social Science Concept
- 2 Previous Work: Modularity and its drawbacks
- 3 Measure 1: Community Boundaries
- 4 Case Study: Gun Control debate on Twitter
- 5 Measure 2: Concentration of Popular Nodes in the Boundary
- 6 Conclusions and Ongoing work

# Community Boundary

community **boundary**: set of all nodes  $v$  that

- 1 have at least one edge that connecting to the other community ( $d_b(v)$ );

Polarization: a  
Social Science  
Concept

Previous  
Work:  
Modularity  
and its  
drawbacks

Measure 1:  
Community  
Boundaries

Case Study:  
Gun Control  
debate on  
Twitter

Measure 2:  
Concentration  
of Popular  
Nodes in the  
Boundary

Conclusions  
and Ongoing  
work

# Community Boundary

community **boundary**: set of all nodes  $v$  that

- 1 have at least one edge that connecting to the other community ( $d_b(v)$ );
- 2 have at least one edge connecting to a member of its community which does not link to the other community ( $d_i(v)$ ).

Polarization: a  
Social Science  
Concept

Previous  
Work:  
Modularity  
and its  
drawbacks

Measure 1:  
Community  
Boundaries

Case Study:  
Gun Control  
debate on  
Twitter

Measure 2:  
Concentration  
of Popular  
Nodes in the  
Boundary

Conclusions  
and Ongoing  
work

$$P_v = \frac{d_i(v)}{d_b(v) + d_i(v)} - 0.5 \quad (2)$$

$$P_v = \frac{d_i(v)}{d_b(v) + d_i(v)} - 0.5 \quad (2)$$

- $P_v > 0 \rightarrow v$  prefers internal connections (**antagonism?**)

$$P_v = \frac{d_i(v)}{d_b(v) + d_i(v)} - 0.5 \quad (2)$$

- $P_v > 0 \rightarrow v$  prefers internal connections (**antagonism?**)
- $P_v < 0 \rightarrow v$  prefers connections with members of the other group (**increased homophily!**)

$$P_v = \frac{d_i(v)}{d_b(v) + d_i(v)} - 0.5 \quad (2)$$

- $P_v > 0 \rightarrow v$  prefers internal connections (**antagonism?**)
- $P_v < 0 \rightarrow v$  prefers connections with members of the other group (**increased homophily!**)

$$P = \frac{1}{|B|} \sum_{v \in B} P_v \quad (3)$$

# Comparing $Q$ and $P$

Work:  
Modularity  
and its  
drawbacks

Measure 1:  
Community  
Boundaries

Case Study:  
Gun Control  
debate on  
Twitter

Measure 2:  
Concentration  
of Popular  
Nodes in the  
Boundary

Conclusions  
and Ongoing  
work

- **Non-polarized networks:**
- Facebook friends:  $Q = +0.24$ ,  $P = -0.24$
- NY Giants and NY Knicks (Twitter):  $Q = +0.15$ ,  $P = -0.002$

# Comparing $Q$ and $P$

Polarization: a Social Science Concept

Previous Work: Modularity and its drawbacks

Measure 1: Community Boundaries

Case Study: Gun Control debate on Twitter

Measure 2: Concentration of Popular Nodes in the Boundary

Conclusions and Ongoing work

- **Non-polarized networks:**
  - Facebook friends:  $Q = +0.24$ ,  $P = -0.24$
  - NY Giants and NY Knicks (Twitter):  $Q = +0.15$ ,  $P = -0.002$
- **Polarized networks:**
  - Brazilian Soccer (Twitter):  $Q = +0.39$ ,  $P = +0.20$
  - 2004 U.S. Political Blogosphere:  $Q = +0.42$ ,  $P = +0.18$

Polarization: a Social Science Concept

Previous Work: Modularity and its drawbacks

Measure 1: Community Boundaries

Case Study: Gun Control debate on Twitter

Measure 2: Concentration of Popular Nodes in the Boundary

Conclusions and Ongoing work

Figure: Distribution of  $P_v$  for communities debating Gun Control.

Polarization: a Social Science Concept

Previous Work: Modularity and its drawbacks

Measure 1: Community Boundaries

Case Study: Gun Control debate on Twitter

Measure 2: Concentration of Popular Nodes in the Boundary

Conclusions and Ongoing work

Figure

- conservatives (no gun control)
- independent (pro-gun control)
- liberals (pro-gun control)

# Outline

Polarization: a Social Science Concept

Previous Work: Modularity and its drawbacks

Measure 1: Community Boundaries

Case Study: Gun Control debate on Twitter

Measure 2: Concentration of Popular Nodes in the Boundary

Conclusions and Ongoing work

- 1 Polarization: a Social Science Concept
- 2 Previous Work: Modularity and its drawbacks
- 3 Measure 1: Community Boundaries
- 4 Case Study: Gun Control debate on Twitter
- 5 Measure 2: Concentration of Popular Nodes in the Boundary**
- 6 Conclusions and Ongoing work

# Concentration of popular nodes in the boundary

Polarization: a Social Science Concept

Previous Work: Modularity and its drawbacks

Measure 1: Community Boundaries

Case Study: Gun Control debate on Twitter

Measure 2: Concentration of Popular Nodes in the Boundary

Conclusions and Ongoing work

- **non-polarized communities:** promotes the existence of high-degree nodes in the boundaries
  - 1 fans of football and fans of basketball
  - 2 college friends and family

# Concentration of popular nodes in the boundary

Polarization: a Social Science Concept

Previous Work: Modularity and its drawbacks

Measure 1: Community Boundaries

Case Study: Gun Control debate on Twitter

Measure 2: Concentration of Popular Nodes in the Boundary

Conclusions and Ongoing work

- **polarized communities:** popular nodes far from the boundary, as strong representatives of their group viewpoints

Polarization: a  
Social Science  
Concept

Previous  
Work:  
Modularity  
and its  
drawbacks

Measure 1:  
Community  
Boundaries

Case Study:  
Gun Control  
debate on  
Twitter

Measure 2:  
Concentration  
of Popular  
Nodes in the  
Boundary

Conclusions  
and Ongoing  
work

two ranks:

- $r$ : a rank of all nodes in the graph sorted by degree

two ranks:

- $r$ : a rank of all nodes in the graph sorted by degree
- $r_b$ : a rank of all nodes in the graph according to the number of cross-boundary connections

## two ranks:

- $r$ : a rank of all nodes in the graph sorted by degree
- $r_b$ : a rank of all nodes in the graph according to the number of cross-boundary connections
- Are high-ranked nodes in  $r$  also high-ranked in  $r_b$ ?
- Spearman's correlation  $\rightarrow [-1,1]$

# Concentration of popular nodes on the boundary

Figure: Facebook Friends (grad and undergrad communities)

Figure:  $\rho = 0.84 \rightarrow$  high correlation, many popular nodes in the boundary, no polarization

Polarization: a  
Social Science  
Concept

Previous  
Work:  
Modularity  
and its  
drawbacks

Measure 1:  
Community  
Boundaries

Case Study:  
Gun Control  
debate on  
Twitter

Measure 2:  
Concentration  
of Popular  
Nodes in the  
Boundary

Conclusions  
and Ongoing  
work

# Gun Control Debate

Figure: Communities on Gun Control Debate

- comm. green and yellow:  $\rho = 0.21$
- comm. green and blue:  $\rho = 0.23$
- comm. blue and yellow:  $\rho = 0.70$  **lack of polarization**

Polarization: a  
Social Science  
Concept

Previous  
Work:  
Modularity  
and its  
drawbacks

Measure 1:  
Community  
Boundaries

Case Study:  
Gun Control  
debate on  
Twitter

Measure 2:  
Concentration  
of Popular  
Nodes in the  
Boundary

Conclusions  
and Ongoing  
work

# Outline

Polarization: a Social Science Concept

Previous Work: Modularity and its drawbacks

Measure 1: Community Boundaries

Case Study: Gun Control debate on Twitter

Measure 2: Concentration of Popular Nodes in the Boundary

Conclusions and Ongoing work

- 1 Polarization: a Social Science Concept
- 2 Previous Work: Modularity and its drawbacks
- 3 Measure 1: Community Boundaries
- 4 Case Study: Gun Control debate on Twitter
- 5 Measure 2: Concentration of Popular Nodes in the Boundary
- 6 Conclusions and Ongoing work

# Summary

Polarization: a  
Social Science  
Concept

Previous  
Work:  
Modularity  
and its  
drawbacks

Measure 1:  
Community  
Boundaries

Case Study:  
Gun Control  
debate on  
Twitter

Measure 2:  
Concentration  
of Popular  
Nodes in the  
Boundary

Conclusions  
and Ongoing  
work

- 1 we examine **both** polarized and non-polarized social networks
- 2 we propose a new metric of polarization (P)
  - 1 focus on **antagonism**
  - 2 tends to generate **negative** measurements for non-polarized social networks
- 3 we show that non-polarized networks tend to show a higher concentration of popular nodes in the intersection

# Summary

Polarization: a  
Social Science  
Concept

Previous  
Work:  
Modularity  
and its  
drawbacks

Measure 1:  
Community  
Boundaries

Case Study:  
Gun Control  
debate on  
Twitter

Measure 2:  
Concentration  
of Popular  
Nodes in the  
Boundary

Conclusions  
and Ongoing  
work

- 1 we examine **both** polarized and non-polarized social networks
- 2 we propose a new metric of polarization (P)
  - 1 focus on **antagonism**
  - 2 tends to generate **negative** measurements for non-polarized social networks
- 3 we show that non-polarized networks tend to show a higher concentration of popular nodes in the intersection
- 4 Q, P and  $\rho$  can be used together

# Ongoing Work

Polarization: a  
Social Science  
Concept

Previous  
Work:  
Modularity  
and its  
drawbacks

Measure 1:  
Community  
Boundaries

Case Study:  
Gun Control  
debate on  
Twitter

Measure 2:  
Concentration  
of Popular  
Nodes in the  
Boundary

Conclusions  
and Ongoing  
work

- 1 **multipolarization:** multiple sides!
- 2 support, antagonism, **indifference**
- 3 mathematical relationship between  $Q$ ,  $P$  and  $\rho$
