

# **Online Social Networking across the Life Span:**

## **Extending Socioemotional Selectivity Theory to Social Network Sites**

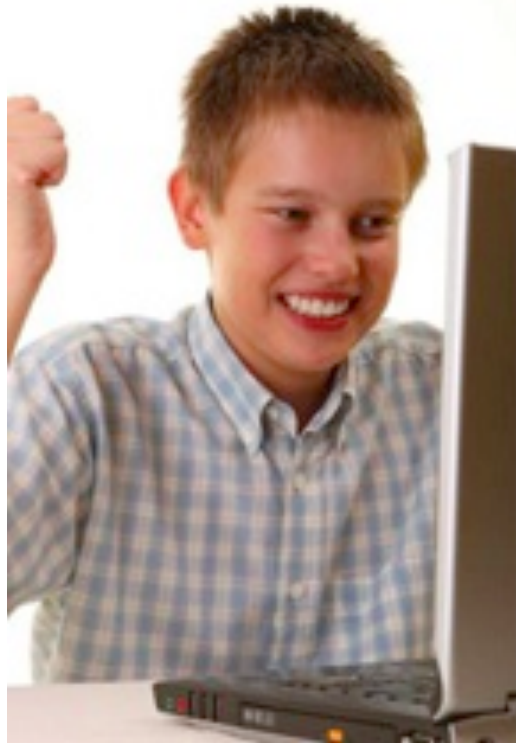

Natalya N. Bazarova, Pamara F. Chang, Yoon Hyung Choi, Corinna E. Lockenhoff

# Social networking site use by age group, 2005-2012

*% of adult internet users age 18+ who use social networking sites*

**What are  
age-related  
differences  
in online  
social  
networking?**

**Age**

**Network  
Size &  
Composition**

**Effects on  
Well-  
Being**

# Socioemotional Selectivity Theory

(Cartensen, 1993, 1998, 2006; Cartensen, Isaacowitz, and Charles, 1999)

# Socioemotional Selectivity Theory

(Lang & Cartensen, 2002; Carstensen, 2006; Cartensen et al., 2000)

# Composition of Social Networks

**ONLINE**

**OFFLINE**

- Range of relationships (Parks, 2010)

# Size & Composition of Social Networks

(Ellison et al., 2011)

# Extending SST to Social Networking Sites

H1a: Age is **negatively associated** with the **total number** of friends in Facebook social networks

H1b: Age is **positively associated** with the **proportion** of actual friends relative to total friends in Facebook social networks

# Extending SST to Social Networking Sites

H2: Age is **negatively associated** with a) self-posting and b) checking information on others on SNSs

# Social Network Composition and Well-Being

- Focus on social capital in regards to social benefits of SNSs (Ellison et al., 2011)
- Bridging social capital — Future-oriented goals
- Bonding social capital — Present-oriented goals

# Social Network Composition and Well-Being

**Network Size &  
Composition**

**Effects on Well-  
Being**

# Social Network Composition and Well-Being

H3: The proportion of actual to total Facebook friends is **negatively associated** with social isolation and loneliness

## Method

- National telephone survey in the U.S.
- N=1000 adults
- Measures
  - Gender, age, marital status, socioeconomic status and education
  - Internet use
  - SNS use
  - Health
  - Loneliness (UCLA loneliness scale,  $\alpha = 0.85$ , Russell, 1996)

## Method

- Measures
  - Gender, age, marital status, socioeconomic status and education
  - **Internet use**
    - Comfort with Internet

- Hours/week spent on Internet
  - 1=less than 1hr/week → 4=more than 10 hr/week

## Method

- Measures
  - Gender, age, marital status, socioeconomic status and education
  - Internet use
  - **SNS use**
    - **Checking information about others**
    - **Share information about self**
    - **1=never, 5 = all the time**

## Method

- Measures
  - Gender, age, marital status, socioeconomic status and education
  - Internet use
  - SNS use
  - **Health**
    - **Mental, Physical, and Overall Health**
    - **Past 30 days**
    - **1 = excellent, 5 = poor**

# Method

- Measures
  - Gender, age, marital status, socioeconomic status and education
  - Internet use
  - SNS use
  - Health
  - **Loneliness** (UCLA loneliness scale,  $\alpha = 0.85$ , Russell, 1996)
    - **How often do you feel alone? Isolated? Lack companionship?**
    - **1=never, 5 = always**

# Results

- H1a: Age is **negatively associated** with the total number of friends in Facebook social networks

*The number of total FB friends and the proportion of actual to total FB friends on Age*

Predictor	$\beta$ For log of total FB friends	$\beta$ For % of actual FB friends
<b>Age</b>	<b>-.56**</b>	<b>.33**</b>
Comfort w. Internet	-.03	.11*
Internet Use	.09*	-.01
Overall Health	-.09*	-0.5
Bad Mental health	.09*	-.06
Bad Physical Health	.04	.13**

Note: \*\*p<.01, \*p<.05, ^p<.10. For the total FB friends: F(10, 537)=34.85, p<.001, adjusted R<sup>2</sup> = .38. for the proportion of actual friends: F(10, 536)=9.71, p<.001, adjusted R<sup>2</sup>=.14.

# Results

H1b: Age is **positively associated** with the proportion of actual friends relative to total friends in Facebook social networks 

*The number of total FB friends and the proportion of actual to total FB friends on Age*

Predictor	$\beta$ For log of total FB friends	$\beta$ For % of actual FB friends
Age	-.56**	.33**
Comfort w. Internet	-.03	.11*
Internet Use	.09*	-.01
Overall Health	-.09*	-0.5
Bad Mental health	.09*	-.06
Bad Physical Health	.04	.13**

Note: \*\*p<.01, \*p<.05, ^p<.10. For the total FB friends: F(10, 537)=34.85, p<.001, adjusted R<sup>2</sup> = .38. for the proportion of actual friends: F(10, 536)=9.71, p<.001, adjusted R<sup>2</sup>=.14.

# Results

H2: Age is **negatively associated** with a) self-posting and b) checking information on others on SNSs 

*Frequency of checking information about others and self-posting on age*

Predictor	$\beta$ Checking on others	$\beta$ Self posting
Age	-.26**	-.26**
Comfort w. Internet	-.04	-.10*
Internet Use	.15**	.15**
Overall Health	-.10**	-.01
Bad Mental health	.12**	.04
Bad Physical Health	.08*	.04

Note: \*\*p<.01, \*p<.05, ^p<.10. For checking information about others: F(10, 537)=10.95, p<.001, adjusted R<sup>2</sup> = .15. For self-posting: F(10, 537)=9.69, p<.001, adjusted R<sup>2</sup>=.14.

## Results

H3: The proportion of actual to total Facebook friends is **negatively associated** with social isolation and loneliness 

*Social loneliness and isolation on percentage of actual to total FB friends*

Predictor	<i>B</i> ( <i>SE</i> )	$\beta$
% of actual to total FB friends	-.01(.01)	-.08*
Age	-.01(.01)	-.05
Comfort w. Internet	.08(.05)	.07
Internet Use	.03(.03)	.04
Overall Health	.11(.04)	.13**
Bad Physical Health/30 days	-.01(.01)	-.09*
Bad Mental Health/30 days	.04(.01)	.40**

Note: \*\* $p < .01$ , \* $p < .05$ , ^ $p < .10$ ;  $F(11.535) = 15.29$ ,  $p < .001$ , adjusted  $R^2 = .22$ .

# Findings

- **Selectivity of FB social partners increases with age**

# Findings

- Compared to younger adults, **older adults:**

Friend  
networks

Actual  
friends

# Findings

**Higher proportion of actual to total FB friends is associated with lower levels of social isolation and loneliness across the life span**

# Implications

- Contributes to our understanding of online social networks
- SST provides a conceptual framework
- Novel findings

# Future Directions

- Application of SST to online social networks segways into exciting future research
  - How do online networks change across the life span using a longitudinal design?
  - When do younger people start actively decreasing their network size?

# Future Directions

- SST emphasizes changes in social goals and motivations
- Social preferences can change due to geographical relocation, illness, or societal-level events (Fredrickson & Carstensen, 1990).
