**ICCC'14**

# Idea Generation (Ideation)

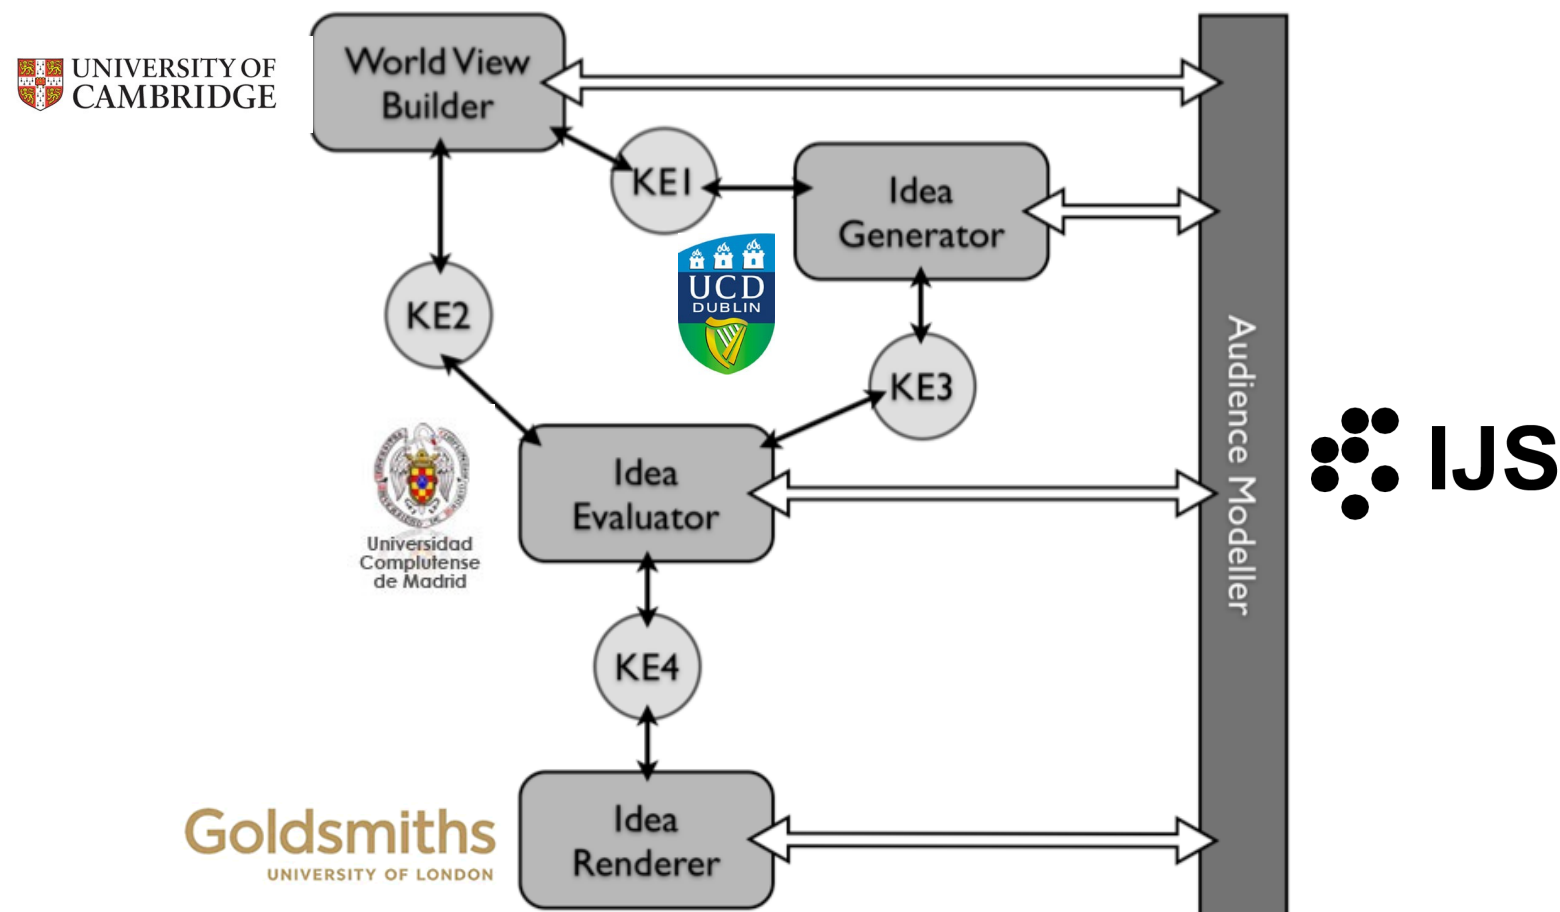

Ideation is central to creativity

Fictional ideation is the process of creating new ideas which are not meant to describe a current truth about the world.

# The What-If Machine

- The WHIM project aims at investigating fictional ideation from a computational perspective.

- Today we present 3 baseline methods (against which to compare more sophisticated approaches later on).

# ConceptNet Approach

- ConceptNet is a semantic network of common sense knowledge from the MIT media Lab.
- Facts: [LHS\_Concept, Relation, RHS\_Concept, Score]

- Fictional ideas are obtained by altering facts from ConceptNet:

*[X, R, Y] becomes [X, R', Y], e.g., R' = ¬R*

*[bee, CapableOf, make\_honey]*

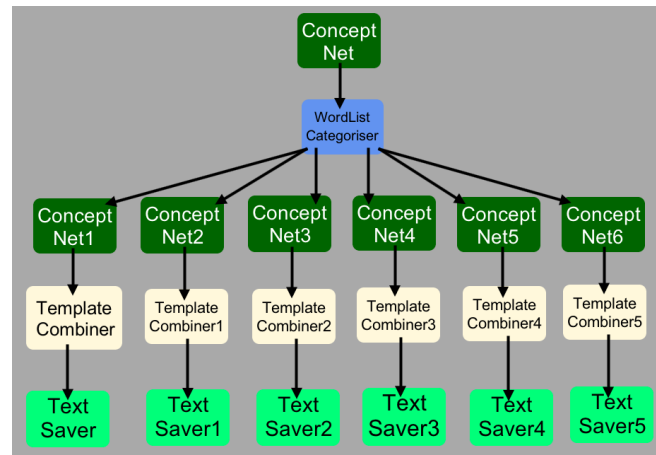

*becomes [bee, NotCapableOf, make\_honey]*

***“What if there was a little bee who couldn’t make honey?”***

- Inference chaining used to evaluate fictional ideas.

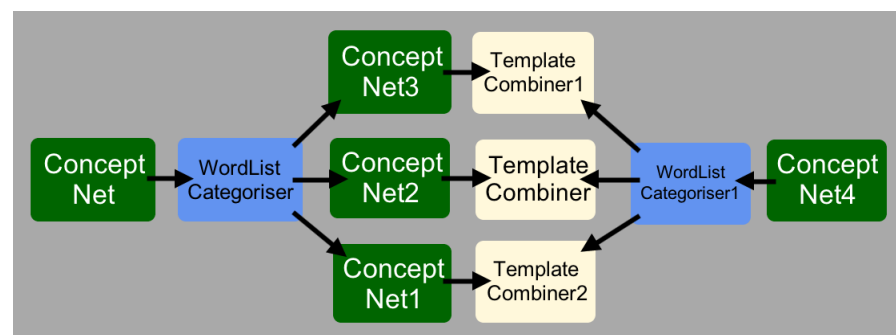

# ConceptNet Approach Examples

## Disney Characters

What if there was a little cat who learned how to ride a bike?

## Superheroes

What if there was a police officer who had feather wings like a bird?

## Surrealist

What if you painted a dolphin that was made out of gold?

## Kafkaesque

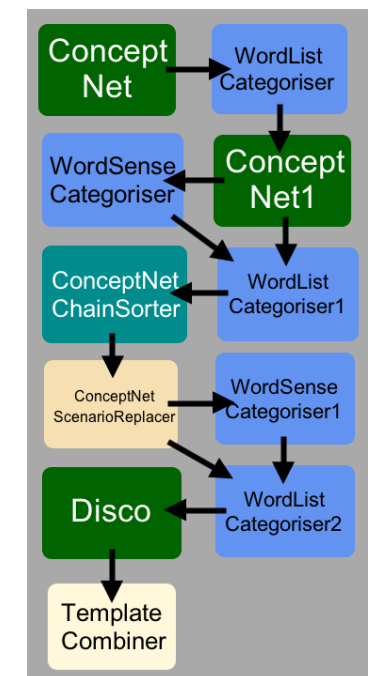

What if there was a woman who woke up in the sky as a bird, but could still speak?

What if there was an old dog, who couldn't run anymore, which he used to do for fun, so decided instead to ride a horse?

\* See John's Talk about the FloWr Framework on Friday!

## Consequences

# Reverb Approach

- Reverb is an open information extraction software which obtains facts from raw text.
- Open set of entities and relations.
- Fictional ideation achieved by substituting an argument of a selected fact for an alternative entity.
  - Find facts of the form [X,r,Y]
  - Find facts of the form [X',r,Y']
  - Fact of the form [X,r,Y'] not seen before

$\underbrace{X}$   
Cattle    $\underbrace{r}$  evolved to    $\underbrace{Y}$   
eat grass

$\underbrace{X'}$   
—    $\underbrace{r}$  evolved to    $\underbrace{Y'}$   
eat meat

***“What if Cattle evolved to eat meat?”***

# Reverb Approach Examples

Cattle occupy a unique role in human history

**What if Cattle occupy a unique role in modern distributed?**

Scotland is steeped in history

**What if Scotland is steeped in tradition?**

Scotland is a part of the United Kingdom

**What if Scotland is a part of life?**

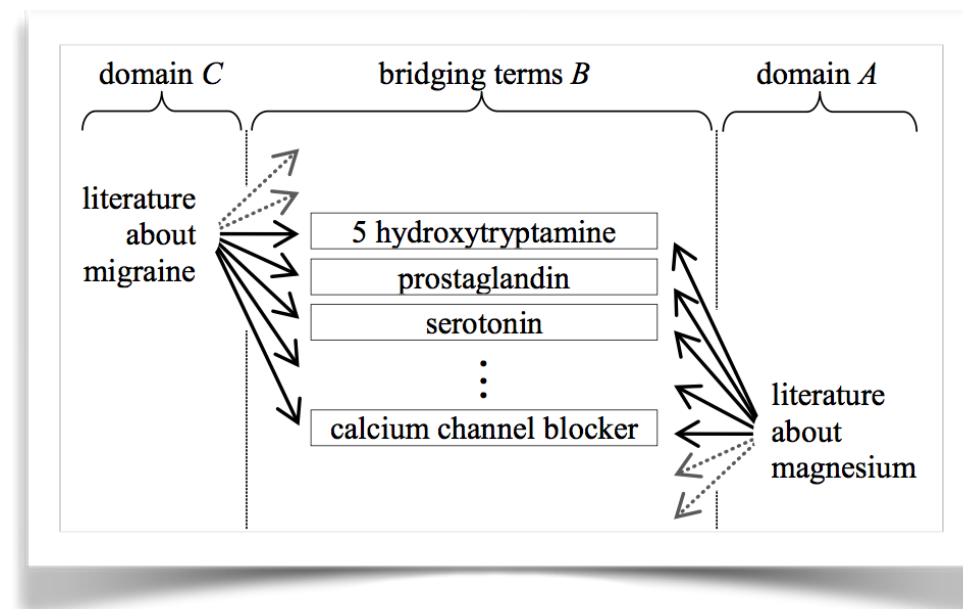

Scotland is in Britain

**What if Scotland is in trouble?**

# Bisociative Discovery Approach

- Bisociation: when a problem, idea, event or situation is perceived simultaneously in two or more domains.
- B-terms: terms which relate different domains.

- The CrossBee system: used for b-term ranking.
- Here b-term potential is used as a measure to rank compound sentence pairs that form creative combinations of statements from two domains:
  - linked what-if tweets and moral statements (Aesop's fables).

# Bisociative Discovery Approach Examples

What if a called myself the pope then charged into the vatican and demanded a duel to the death with an old **man**.  
Every man should be content to mind his own business.

What if I was not actually a short sixteen year old girl but a 6'2 49 year old **man**.  
One man's pleasure may be another's pain.

What if the most **troubled** time is now. Trouble comes from the direction we least expect it.

# Baseline Curation Analyses

Team members selected the proportion of ideas that were both understandable and fictional:

| Flowchart      | T1 | T2 | Yield        | C-Coeff (%) |
|----------------|----|----|--------------|-------------|
| A              | 1  | -  | 97           | 72          |
|                | 3  | -  | 21           | 90          |
|                | 5  | -  | 14           | 93          |
| B              | 5  | 1  | 453          | 78          |
|                | 5  | 2  | 94           | 88          |
|                | 5  | 5  | 27           | 100         |
| C              | 5  | 1  | 48           | 88          |
|                | 5  | 3  | 7            | 100         |
| D              | -  | -  | 272          | 56          |
| E              | -  | -  | 871          | 76          |
| <b>Average</b> |    |    | <b>190.4</b> | <b>84.1</b> |

ConceptNet Approach

| Criteria       | Yield      | C-Coeff (%) |
|----------------|------------|-------------|
| Fictional      | 500        | 90.9        |
| Understandable | 500        | 94.6        |
| Non-duplicate  | 500        | 73.6        |
| <b>Overall</b> | <b>500</b> | <b>59.1</b> |

Reverb Approach

| Criteria                 | Yield | C-Coeff (%) |
|--------------------------|-------|-------------|
| What-if + moral (b-term) | 32    | 28.1        |
| What-if + moral (random) | 16    | 6.25        |

Bisociative Discovery Approach

# Crowd-Sourcing Study Setup

- Disney characters theme.

What-If Surveys

**whim**  
The What-if Machine

WHIM Disney Character Survey

\* 1. Imagine you are suggesting a character to a Disney executive. The character is to be central in a new animated film. Please rank the following characters from best (1) to worst (14) according to your general impression of each.

You can rearrange the list into your preferred order by dragging and dropping each item.

- 1. What if there was a little fish who couldn't find the underwater?
- 2. What if there was a little bird who couldn't find the tree nest?
- 3. What if there was a little pony who couldn't find the farm?
- 4. What if there was a little oyster who couldn't find the half-shell?
- 5. What if there was a little bee who couldn't find the honey?
- 6. What if there was a little sheep who couldn't find the field?
- 7. What if there was a little frog who couldn't find the lily pad?
- 8. What if there was a little rabbit who couldn't find the burrow?
- 9. What if there was a little rabbit who couldn't find the eater?
- 10. What if there was a little ox who couldn't find the tail?
- 11. What if there was a little dog who couldn't find the wool?
- 12. What if there was a little mole who couldn't find the hole?
- 13. What if there was a little cat who couldn't find the litter box?
- 14. What if there was a little dog who couldn't find the bark bone?

© The What-If Machine Project

Imagine you are suggesting a character to a Disney executive. The character is to be central in a new animated film. Please rank the following characters from best (1) to worst (14) according to your general impression of each.

- What if there was a little fish who couldn't find the underwater?
- What if there was a little bird who couldn't find the tree nest?
- What if there was a little pony who couldn't find the farm?
- .....

- 4 surveys: CapableOf (CO), Desires (D), LocatedNear (LN) and a Mixed survey (CO, D and LN ideas).

# Crowd-Sourcing Study Setup

---

- 2 classes of ideas:
  - ConceptNet Chaining (CC)
  - Non-Chaining (NC).
- 4 questions per survey:
  - General Impression (GI)
  - Emotional Response (ER)
  - Level of Expectation (LE)
  - Quality and Quantity of Plot Lines (PL)

# Crowd-Sourcing Study Results

- 138 participants: native and non-native English speakers (Minimum of 31 participants per survey).
- CC ideas were ranked around 1 position higher than the NC ideas.
  - Chaining provides a reliable quality measure of fictional ideas.
- Mixed survey: CapableOf ideas ranked higher, followed by Desires ideas and then LocatedNear ideas. Our interpretation:
  - D-ideas and LN-ideas failed with respect to feasibility of the fictional characters:
    - ‘a little goat who is afraid of eating’ (D-idea) ✘
    - ‘a little oyster who couldn’t find the half shell’ (LN-idea). ✘
  - CO-ideas were found to be “reminiscent of existent cartoons”:
    - ‘a little bird who couldn’t learn to fly’ (Animated film Rio). ✔

# Crowd-Sourcing Study Results

- Positive correlations between:
  - Emotional Response (ER)
  - Level of Expectation (LE)
  - Quality and Quantity of Plot Lines (PL)

} General Impression (GI)
- Chaining scores and average participants' rankings.
- ConceptNet relations scores (IsA, CapableOf, etc.) and the average participant's ranking.
- Predicting users preferences:

|            | MCC   | GI    | ER         | PL     | LE         |
|------------|-------|-------|------------|--------|------------|
| Method     | ZeroR | Ridor | RandomTree | NBTree | RandomTree |
| Accuracy % | 35.08 | 49.12 | 56.14      | 43.85  | 54.38      |

Majority Class Classifier (MCC) vs Best Classifiers

# What-If Machine Online Prototype<sup>1</sup>

The What-If Machine... version 1

whim  
The What-if Machine

Category:   Choose your own?

Relation:  Result selection:  Time and Effort:

*Results for vehicle, used for, top, be quick*

---

What if there was a little coach who forgot how to teach?  
What if there was a little vessel who forgot how to move?  
What if there was a little plane who forgot how to fly?

- **Category:** select topic/theme.
- **Relation:** type of facts to be transformed.
- **Result Selection:** best idea, top ideas or any idea.
- **Time and Effort:** be quick, try a little or try your hardest.

1. <http://www.whim-project.eu/whatifmachine/>

# Current and Future Work ...

---

- Improving Inference Chaining Technique - focusing on temporal and causal properties as well as sentiment analysis.
- Application domains: new PhD project at Goldsmiths on *Idea Based Game*.
- Tie in the work from the different WHIM partners.
- Explore different types of renderings:

[cat, desires, milk] : What if there was a **little** cat who was **afraid** of milk?

addicted, hatred, obsessed, disappointed, etc...

Also we are currently exploring the use of poems, riddles, nursery rhymes, stories...:

## **What if there was an animal that lost a body part?**

*“What if there was a dog that lost his cold nose?*

*What if there was a dog that lost his good nose?*

*What if there was a dog that lost his wet nose?*

*What if there was a monkey that lost his nose?”*

# Thanks!
