Large Scale Predictive Modeling for Micro-Simulation of 3G Air Interface Load

Dejan Radosavljevik – T-Mobile NL & Leiden University Peter van der Putten – Leiden University

Data Mining Research

Over emphasis on technology, under emphasis on the user

"Everyone talks about rock these days; the problem is they forget about the roll."- Keith Richards

Data Mining Research

Over emphasis on technology, under emphasis on the user

"Everyone talks about rock these days; the problem is they forget about the roll."- Keith Richards

What they thought would happen

on time.

What actually happened

USAID Nile Delta Project forgot about the roll too 😕

How to Make Mobile Network Analysts Who (Want to) Know Nothing About Data Mining Use It To Run Their Own Simulations of Mobile Network Service Quality Across Thousands of Cells And Trust The Results

This research

Addresses both the rock and the roll

The rock:

- Simple standard data mining algorithm
 - Multivariate Linear Regression + Wrapper
- Fully Automated Data Mining process, no human interaction
- Uses tools that are either Open Source or part of regular Telco infrastructure- Low Cost
- Massive number of models in a short amount of time
- High impact business problem, not addressed with Data Mining before

The roll:

- Emphasis on Deployment
- Real business world applied study
- Embedded and Deployed Data Analysis System
- Data mining for non-data miners
- Simulation framework decoupled from data mining

3G Air Interface Load

What's the problem?

Load Approximation and Prediction

Using Linear Regression to gain acceptance

- One model per cell
 - Load pockets^{*}
 - Interest in cells that do not behave normally

Why Linear Regression

- Focus on the high end of the load curve
 - Remove zero instances
- Fast- Speed is crucial
- Low variance -> less over-fitting
- Easy to implement and explain
- Transparent, no 'black box'
- Easy to export to Excel

Feinberg, E.A., Genethliou, D.: Load Forecasting. In: Chow, J.W., Wu, F.F., Momoh, J., (eds.)

Applied Mathematics for restructured electric power systems, pp. 269-285, Springer, Heidelberg (2005)

How does it all work-The Rock?

Data and Structure

- 9 input parameters, 4 output parameters
- Hourly measures for six weeks
- More than 20,000 cells
- About 80,000 models in less than a week
 - When run in parallel, in just 3 days

How does it all work-The Rock? Data and Structure

- Query the data for the cell
- Filter out zero instances output
- Use a wrapper for feature selection
- Create, validate and store the model in Excel

Original Use Case How we thought the model will be used

Budget for Network upgrades using forecasts of future load

Feed the Evaluate If the Value Scale Input Scaled Input Current is Above a Parameters Parameters Load Threshold, Based on into the And The Mark the Regular Regression Respective Cell for Growth Load Input Upgrade Formulas Parameters

Original Use Case How we thought the model will be used

Budget for Network upgrades using forecasts of future load

Feed the Evaluate If the Value Scale Input Scaled Input Current is Above a Parameters Parameters Load Threshold, Based on into the And The Mark the Regular Regression Respective Cell for Growth Load Input Upgrade Formulas Parameters

Unforeseen Use Cases

We created a monster

Scaling the input parameters can be based on anything

Several other use cases developed

- Business case evaluation for adding an MVNO like
- Business case evaluation for M2M
- Prioritization of picking locations for 4G
- Calculating network improvements necessary when opening shops-> implies more customers
- Calculating network improvements necessary for specific geo-marketing campaigns

Deployment- This is how we roll

The least analyzed step of the data mining process and key to our success

Addressing Product Based Causes of Innovation Failure* by decoupling data mining from simulation

- Relative Advantage
 - A huge number of models and allows simulation
- Compatibility
 - Use Current Infrastructure
- Complexity
 - Data Mining reduced to Excel ©
- Observability
 - It's a formula in Excel
- Trialability
 - Change an input value Excel

Deployment- This is how we roll

The least analyzed step of the data mining process and key to our success
